SOS	572	Sustainable Energy Transitions	A sustainable future requires a transition away from fossil fuels. This process is far more complex than a simple substitution of fuels. Energy transitions are multifaceted and complex social phenomena, involving economic, technological and political processes that unfold across decades. Delves into these processes for past energy transitions, addressing how energy use evolved throughout history, how it influenced urbanization and socioeconomic development, and how technological change facilitates and constrains energy transitions. What do past energy transitions tell us about how easy or hard it will be to undergo another energy transition? SOS	573	Sustainable Energy Policy	Provides a comprehensive survey of energy policies that are shaping the transition to sustainable energy. For context, begins with two views of energy transitions: interdisciplinary socio-technical perspectives and conventional environmental economic perspectives. Next, examines theory and case studies for numerous policies, including carbon pricing, regulatory standards, subsidies, utility regulation, community energy and innovation policies. Lastly, discusses the political drivers and energy system impacts of energy policies. SOS	574	Data Analytics for Sustainable Energy	Examines the data sources, methodologies and metrics used to measure sustainable energy and explores how they are used to shape public policy and track progress toward sustainability goals. The metrics, which relate to cost, efficiency and environmental impacts, provide the foundation for assessing the relative merits of energy technologies and systems based on a variety of criteria. In addition to quantitatively evaluating a multiplicity of energy sources and systems, the course builds skills in research methods, data analytics and critical thinking. SOS	656	Human Rights and Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. Yet human rights demands and environmental concerns are not always in harmony. Explores these tensions and opportunities by examining three substantive areas: urban ecology and human rights, the human right to food, and the human rights implications of extractive industries such as oil and mining. Following an introduction to the key concepts of human rights and sustainability, explores the substantive areas through theoretical and empirical readings on each: grassroots accounts of struggles over environment-related human rights; and selections from literature and film that illustrate the environmental justice issues at stake. TGM	204	Principles of Marketing for Global Organizations	Explores the ways in which global marketing strategies reflect a deep understanding of markets and create valuable offerings for customers globally. Targeting is the process by which we analyze opportunities and identify those customers where our business has the greatest prospects for success. Positioning is the process of assembling the "total offering" (product, service, distribution and price) and communicating the benefits of this "total offering" to the members of our target market. Challenges students to think critically about global competition. As such, rote learning of terms and concepts is not sufficient to prepare students to manage a business in global markets. TGM	555	Global Product Development and Pricing	Combines global product development (GPD) and global pricing (GP). GPD examines how an organization can identify, develop and manage products for global markets. Pays special attention to issues such as the product development cycle, innovation charter, barriers to product development and effectively organizing for product development. GP provides in-depth knowledge of the field of global pricing, covering the psychology, economics and tactics of pricing for a business enterprise, product or service. Better pricing knowledge usually converts to better bottom-line results. Students learn pricing theory and tactics as well as develop hands-on pricing skills, all aimed at improving profitability. These skills can be applied across the full range of professional contexts--as entrepreneurs, brand managers, business unit managers, management and M&A consultants. TGM	556	Global Strategic Services Marketing	Services have come to dominate our economy. Yet there remains a naïve belief that services marketing and management is a simple adaptation of goods marketing and management. Unlike physical goods, services are co-produced with customers at a time, and in a place, of the customer's choosing. This co-production directly involves an organization's front-line employees. As a result, it is more difficult for services to be inventoried and checked for quality assurance. Provides a thorough understanding of the management and continuous improvement of service operations, including a thorough understanding of the role of customers in service operations such that service firms can design effective service experience so as to minimize service failure. Provides students with an end-to-end hands-on customer experience management (e.g., customer satisfaction and loyalty), project that involves survey design, customer experience model development, data collection, data analysis, and recommendations.	N	LEC	N	GNA	Thunderbird School of Global Management	Thunderbird School of Global Management	3		Prerequisite(s): TGM 503 or 557 OR TGM 551; TGM 552
TGM	557	Global Data and Marketing Analytics	Global companies are embracing digital technologies to better understand their customers' journey and subsequent word-of-mouth discussions consumers have about their product online. This course is about understanding how multinational organizations make strategic use of Big Data to gain a competitive advantage in the global economy. TGM	558	Global Data Analysis for Strategic Marketing	Provides an understanding of the key marketing issues through an examination of various marketing decisions. Course complements other marketing courses by adopting a more hands-on and practical approach to strategic market planning. A combination of lectures and discussions, analysis of cases, software demonstrations, and a simulation game facilitate understanding of the material. Requires a solid understanding of marketing planning, statistics and quantitative methods.	N	LEC	N	GNA	Thunderbird School of Global Management	Thunderbird School of Global Management	3		Prerequisite(s): TGM 503 OR TGM 551 and TGM 552
TGM	559	Global Brand Management	Provides a managerial orientation to the topic of global brand management. Prepares participants for a career either in the role of the "traditional brand manager" or in the role of a "manager with brand-related responsibilities." A major portion of the course is working on a global brand field project to develop a brand management/marketing plan for a brand and brand challenge of student (and team) choosing. Emphasizes the ethical dimension of global brand management; focuses on an individual brand ethics project. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. WST	620	Advanced Feminist Theory in a Transnational Context	Concentrates on transnational feminist theory and its intersections with queer theory, postcolonial theory, and critical race theory. Also looks at the ways in which (or indeed, whether) academic discourses have anything useful to say about the worlds in which we live. Among the questions we'll need to have constantly in our minds are: In what ways has feminist theorizing changed over time? Does transnational feminist theory challenge or even undermine previous feminist theoretical discussions or the perspectives you might be familiar with from your undergraduate days? What kinds of engagements do our authors have with theorists in other areas (queer studies, postcolonial studies, critical race theory)? Can you discern any sort of new feminist grand narrative emerging from these works? In what ways might our authors' perspectives help you conceptualize and contextualize your own work? WWS	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it.	N	LEC	N	OPT	The College of Liberal Arts and Sciences	Historical, Philosophical & Religious Studies, Sch	3		Prerequisite(s): minimum 45 hours; Credit is allowed for only HST 460 or WWS 460 or HST 494 (World War II Studies) or HST 494 (Introduction to World War II Studies)

ACC	509	Statistics for Accounting Analytics	Addresses theories of probability and uncertainty through the use of statistics including descriptive, predictive and prescriptive analyses as well as regression and other models to support audit decisions and conclusions. This heavily quantitative course starts with a realization that probability and uncertainty can be alleviated (or compounded) with different statistical decision making and so starts with theories of probability and uncertainty to properly understand these concepts. Once these concepts are grounded, this class focuses on data, techniques and technologies that can aid in appropriate decision making with accounting. Emphasizes formulating real-world models--driven by descriptive, predictive and prescriptive statistics--to represent complex real-world accounting decision problems and on using a variety of tools to gain better insight into properly addressing these problems. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. ASB	358	The Yoruba and the Atlantic World	The Yoruba in the African diaspora is how Africans, separated from their home country and scattered in a new land, managed to retain their traditions and reform their identities. ASB	442	Global Cities	This close look at megacities in the global south decisively challenges the outdated impression that the rest of the world's cities still lag way behind the U.S. and Europe. The social sciences' debate over "global cities" anchors our examination of the reorganization of metropolitan social space under impact of neoliberal globalization since the 1970s. Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. BIO	112	Discovery: Why Sex?	"Why?" is a question that animates the youngest of children to the most seasoned of scientists. The acts of asking and answering "Why?" highlight the integrated nature of scientific knowledge and discovery. Demonstrates scientific disciplines are not walled cities in which knowledge is neatly segregated from lines of inquiry and knowledge in other disciplines. Instead, scientific concepts weave throughout and between disciplines and scientists increasingly rely on colleagues from different scientific fields to find answers to scientific questions. So our journey to find responses to the question "Why Sex?" takes us not just to biology, but also to earth science and to physics. Along the way, scientists are linked together not only through concepts that crosscut the disciplines, but also in their reliance upon key scientific skills such as the ability to observe, think critically, measure, gather data and communicate their findings. BIO	568	Stress and the Brain	Covers the fundamentals of stress and brain interactions. Presents a foundation from a historical perspective, then the basics of an organism's stress response, including the activation of the sympathetic nervous system and the hypothalamic-pituitary-adrenal axis. The stress response is highly conserved and allows organisms to respond and adapt to their environment. A highly effective and robust stress response facilitates adaptation and behavioral flexibility. However, a maladaptive stress response can produce detrimental outcomes. The ultimate goal is to understand the dynamic and reciprocal processes by which the stress response and brain interact to produce behavioral flexibility and resilience or detrimental outcomes. CDH	501	Digital Humanities: Critical Theory and Methods	Digital technologies are now intricately woven into our lives--whether it's in terms of authoring a paper in a text editor, sending texts and emails, or doing data analysis. Popular narratives of the "big" and the "new" celebrate and sometimes bemoan the ways that these tools shape our communication, access to information, habits and even our physical bodies. Focuses on the histories of these technologies, their operations, popular conceptions about such tools, and their affordances and limits for humanities scholarship. Students learn how to leverage digital technologies, but also how to critically read them. Broad ranging, in addition to surveying the "big tent," students are encouraged to utilize their final projects to engage with specific disciplinary digital tools and methods relevant to their scholarly work. CEL	100	Great Ideas of Politics and Ethics	Introduces fundamental debates and ideas of politics in both the West and beyond. Surveys ancient, medieval and modern thinkers in the Greek, Jewish, Christian and Muslim traditions, tracing their influences on contemporary debates with focus on the great questions of human nature, social and political life, and the relationship between religion and politics. Studies both the ideas and historical statesmanship of such figures as Plato, Cicero, Tertullian, Aquinas, Saadyah Gaon, Maimonides, Al-Farabi, Ibn Rusud (Averroes) and Al-Ghazali, as well as various leaders and writers from modernity in America and abroad. Includes separate discussion to encourage active learning; expects students to write analytical papers and make a class presentation. CEL	200	Great Debates in American Politics and Economics	Introduces fundamental ideas and debates about liberty and equality in American thought from the colonial era to the present, focusing on major political and economic figures and issues—ideas that continue to shape political and economic debates in 21st-century America, thus providing crucial foundations for future leadership roles in either public affairs or the private sector. A major theme is the tension between liberty and equality and between constitutionalism and democracy, in three centuries as a democratic, commercial republic. Includes separate discussion sessions at the end of each week to encourage active learning; expects students to write analytical papers and make a class presentation.	N	LEC	N	GNA	The College of Liberal Arts and Sciences	School of Civic & Economic Thought and Leadership	3	HU	Credit is allowed for only CEL 200 or CEL 294 (Great Debates in American Politics and Economics)
CEL	235	Federalists, Anti-Federalists, and the Enduring Debate over American Constitutionalism	Examines the arguments and questions raised by the Federalists and Anti-Federalists during their debates over the 1787 Constitution, which provide resources to understand and contribute to contemporary political debates. Federalists and Anti-Federalists debated such fundamental issues as political power, federalism, republicanism, representation, separation of powers, protection of rights, slavery and the character of the people and their leaders. They model how intellectually deep, and morally serious, public discourse can be. Students study their arguments and, with the help of Tocqueville's Democracy in America, apply these debates to our current politics, while considering the rhetorical and other demands placed upon statesmen in constitutional, democratic systems. Students write analytical papers and participate in a simulation of a modern-day constitutional convention. CEL	300	Capitalism and Great Economic Debates	Explores the relationship, positive or negative, between markets and morality in a capitalist system. Approach is historical and comparative, beginning with the classical world which, for the most part, looked down on economic activity. Then considers the modern philosophers and political economists most associated with both the rise of capitalism and the emergence of the science of political economy. Readings come from Aristotle, Locke, Mandeville, Smith and Marx, among others. CPP	513	Public Private Partnerships for Emergency Management and Homeland Security	Focuses on how public private partnerships (P3s) offer alternative mechanisms for supporting community emergency preparedness efforts, hazard and risk management practices, and community resilience promotion. The traditional form of a P3 model is typically a build-operate-maintain arrangement (with various permutations of those element combinations) around physical infrastructure. However, more complex public-private relationships related to emergency and disaster management issues, public health issues and other social welfare concerns have emerged over the past several decades. Investigating how these arrangements might affect emergency management, homeland security and the management of hazards and risk in general is critical to understanding how public sector operations are likely to function in the future in the United States. CPP	514	Interagency and Intersector Coordination for Emergencies and Disasters	Examines the nature of intersector and interagency coordination and collaboration efforts in the domain of emergency management and homeland security. Three core substantive area of focus: (1) covers the nature of inter-sector, inter-agency coordination and collaboration activities as a chief feature of the general emergency management function any community must address; (2) focuses on issues related to the required interaction between the local, county, state and federal government emergency management functions and the private sector; (3) focuses on the functional roles and the specific types of contributions made by public, private and nonprofit sector organizations in community preparedness for emergencies and disasters. CPP	520	Program Evaluation for Emergency Management and Homeland Security	Examines core concepts and techniques of program evaluation and policy analysis and applies them to specific challenges in the domains of emergency management and homeland security. Develops knowledge and expertise in the practice of evaluating public sector programs, policies and other agency actions related to hazards issues—both natural and human-made. Develops students' knowledge, skill and ability in identifying appropriate research designs for particular evaluation and policy analysis problems; in managing data and focusing reports based on project objectives; and in appropriately characterizing and presenting empirical those data gathered for program evaluation and policy research projects. CPP	521	Public Finance and Project Management for Emergency Management and Homeland Security	Focuses on the related topics of how state and local governments utilize use budgeting and financing techniques in the emergency services domain as well as how emergency/disaster services projects are managed. Specifically, the first part of the course covers budgeting and finance mechanisms and processes in the public sector generally and how those mechanisms and processes relate to emergency response, general hazards management and disaster recovery. The second part of the course covers core principles of project management and then applies those principles to process related to grant application and grant award management in the areas of preparedness, hazard mitigation and disaster recovery. CPP	523	Foundations of Program Evaluation I: Multiple Regression	Regression serves as the foundation for modern quantitative program evaluation techniques. Regression analysis is not a single thing—it is a powerful set of tools used to examine relationships in data and test hypotheses concerning the significance of these relationships. Regression can be used to analyze observational data, in which case it can be used to identify important correlations that help us predict when events will occur together. In the program evaluation context we are specifically interested in causal analysis, which allows us to determine whether a management practice, a nonprofit or government program, or a specific public policy has a positive impact. When certain conditions are met we can use regression analysis to estimate the impact of a policy or program. This course builds a foundational understanding of the mechanics of multiple regression, the proper interpretation of regression models, and the circumstances in which we can use regression results for causal reasoning. CPP	525	Foundations of Program Evaluation III: Advanced Regression Tools	Extends previous course by translating each specific form of the counterfactual—pre-post with comparisons, reflexive design, and the post-test only design—into specific regression models that leverage each counterfactual. Helps expand program evaluation toolkit by demonstrating how to estimate several common regression models that leverage unique data and counterfactual specifications and teaches how to estimate program effects using a given research design. The ability to collect, organize and analyze data is a desirable skill set for professional knowledge workers, high-level management and evaluators. Introduces the R data programming language, an open source platform that has become an industry standard because of its flexibility and power.
