~~SCHOLASTIC YEAR, 1895-96,~~

— AND —

Annual Circular for 1896-97.

Calendar for 1896-97.

The school year is divided into two semesters of twenty weeks each. Each semester is divided into two terms of ten weeks each.

1896.

First semester begins.....September 7.
Entrance examinations and registration...September 7-8.
First Quarter ends.....November 13.
Second Quarter begins.....November 16.
Thanksgiving vacation.....November 26.
Holiday vacation begins.....December 25.

1897.

Holiday vacation ends.....January 3.
First semester ends.....January 29.
Second semester begins.....February 1.
Washington's Birthday vacation.....February 22.
Third Quarter ends.....April 8.
Fourth Quarter begins.....April 11.
Anniversary and Commencement Exercises.....
.....June 14, 15, 16, 17.

Board of Education.

MEMBERS EX OFFICIO.

HON. F. J. NETHERTON.....	Phoenix
Superintendent of Public Instruction, Secretary.	
HON. P. J. COLE.....	Phoenix
Territorial Treasurer, Treasurer.	

MEMBERS BY APPOINTMENT.

REV. DANIEL KLOSS.....	Tempe
President.	
MRS. REBECCA G. PHILLIPS.....	Phoenix
COL. J. F. WILSON.....	Prescott

Regular meetings during first week in January, and
first week in June.

Official Board of Visitors.

HON. MORRIS GOLDWATER.....	Prescott
DR. CHAS. H. JONES.....	Tempe
HON. WILLIAM NEWELL.....	Mesa

JANITOR, GEORGE W. WILSON.

Faculty.

1895-1896.

JAS. McNAUGHTON, A. M., PH. D.....President

Psychology, Pedagogics and Mathematics.

LAURA W. SHARPE, B. E., B. O.

Language, Elocution and Physical Culture.

LILLIAN BALLANCE RICE, B. L.

History, Geography and Literature.

FRED M. IRISH, B. S.

Natural Sciences.

INSTRUCTORS IN AUXILIARY CLASSES.

FRANCES B. ABELL.

French, German, Shorthand and Bookkeeping.

ELLA F. TAYLOR.

Vocal and Instrumental Music.

AMINA J. McNAUGHTON.

Latin, Drawing and Painting.

Register of Students.

POST-GRADUATE.

• Culver, Caroline.....Tempe

THIRD YEAR CLASS.

× Abell, James Lawrence.....Mesa
× Culver, Helen Edith.....Tempe
× Empey, Frank Edgar.....Florence
× Frankenberg, Don Juan.....Tempe
× Frankenberg, Roy.....Tempe
• Guild, Nott Erwin.....Florence
• Hanna, Florence Grace.....Camp Verde
× Hayden, Carl Trumbull.....Tempe
• Hedgpeth, Jane Margaret.....Phoenix
• Hedgpeth, Lewis Pleasant.....Phoenix
• Hendrix, Georgia Alfretta.....Tempe
• McNaughton, Amina Wilson.....Tempe
• Morris, Deborah Iola.....Camp Verde
× Newell, Fay Lulu.....Mesa
× Nichols, Julia Rosetta.....Tempe
• Peyton, Ada May.....Florence
• Rudd, Olney Lee.....Springerville
× White, Bertha Monica.....Tempe

FIRST AND SECOND YEAR CLASSES.

E. Stanley Windes.....	Taught one year.....	Cottonwood, Arizona

Normal Department.

COURSE OF STUDY.

It is the purpose of the high school and the college, to impart instruction in the various branches of useful knowledge; but of the normal school, not only to give instruction in the various branches, but also in the processes by which the mind acquires knowledge and power, and in the pedagogical procedure based thereon.

The course of study, comprising academic and professional work, requires three years for completion.

The "Tabulated Outline of Course of Study" indicates the subjects to be pursued, their order of arrangement, and the time allotted to each; the "Analysis of Course of Study," its aim and scope.

Tabulated Outline of Course of Study.

Rhetorical and physical exercises at stated intervals throughout the whole course.

The figures attached to each branch indicate the number of hours per week assigned to it.

Auxiliary Classes.**BUSINESS DEPARTMENT.**

The course of study in this department comprises phonography or shorthand, typewriting, advanced book-keeping and business forms and methods.

A full course consists of twenty-five lessons given semi-weekly.

Instruction in these branches will be given by Mrs. Frances B. Abell at the following rates:

A full course in either bookkeeping or phonography to single students.....	\$25.00
To students, in classes of ten or more, each..	\$15.00
Reporting style at same rate.	

Instruction in typewriting free to those receiving lessons in phonography.

DEPARTMENT OF MODERN LANGUAGES.

In this department, instruction will be given in French and German by Mrs. Frances B. Abell at the following rates:

Single lessons.....	50 cents.
Classes of five, each.....	40 "
Classes of ten, each.....	30 "

DEPARTMENT OF ANCIENT LANGUAGES.

Instruction in Latin will be given in this department by Mrs. Amina J. McNaughton, at the following rates:

Single lessons.....	50 cents.
Classes of five, each.....	40 "
Classes of ten, each.....	30 "

ART DEPARTMENT.

The work of this department includes pencil, charcoal and crayon drawings, and painting in oil and water colors. Instruction will be given by Mrs. Amina J. McNaughton at the following rates:

Lessons, single, two hours.....	\$1.00
" " one hour.....	.50
" classes of five, two hours, each.....	.40
" " ten, " " 30

CONSERVATORY OF MUSIC.

Private instruction will be given to students in vocal

and instrumental music by Miss Ella F. Taylor, at the Conservatory of Music, at the following rates:

One lesson a week, ten weeks, instrumental or vocal.....	\$10.00
Two lessons a week, ten weeks, instrumental or vocal.....	\$15.00

Analysis of Course of Study.

READING.

Reading, as the term is generally understood, consists of two quite distinct processes; the first, that of gaining the thought from written or printed characters; the second, that of giving it effective expression.

True effective expression is the result of well regulated mental activity upon a thoroughly trained and developed physical organism.

The thought, vividly conceived, contains within itself the power, to a great extent, of generating its appropriate expression; but this is not true of thought as ordinarily grasped by the mind of the reader. The great obstacle to proper expression is vague thought conception.

It is the aim of the instruction in this department, to lead the student to grasp the thoughts symbolized on the written or printed page as real entities and living truths; to intensify mental pictures by exercising the imagination; to cultivate the voice, as the chief instrument of expression, by proper drills designed to give it greater power, scope, and accuracy of modulation; to cultivate the ear, as the arbiter of vocal expression, to a nice discrimination of tones; and to train the muscles into ready submission to mind, in expressing thought and feeling by attitude, gesture and facial movement.

It is also the aim of this department, to lead the student so fully to appreciate the thought and sentiment of the selections read, as to cultivate a taste for good reading.

TOPICS FOR STUDY IN ACADEMIC WORK.

Carriage and attitude of the body; breathing exercises; vocal elements of language; articulation; enunciation; pronunciation; force; pitch; quality of tones; effect of imagination on expression; effect of mental states on expression; cultivation of mental states; relation of voice and gesture; expressive use of body.

TOPICS FOR DISCUSSION IN METHODS IN PRIMARY GRADES.

Primary reading methods—phonic, alphabetic, phonetic, synthetic sound, objective, word, sentence; selection of the available features of all these methods, and the proper combination of them to produce the best results in first reading; what words to present first to the child; how to present new words; how to impress them; what a primary reading lesson ought to comprise, and what not; how to remedy drawling, lisping, and repeating; how to secure natural tones, fluency and correct expression; sense reading; use of objects and pictures; use of blackboard and charts; hunting exercises; seat work; manner of teacher; connection between reading and spelling, between reading and writing.

TOPICS FOR DISCUSSION IN METHODS IN HIGHER GRADES.

Kind of reading matter suitable for the different grades; assignment of lesson; review; preliminary exercises; preparation of lesson by teacher, by pupil; illustrative reading by teacher; sight reading; things to be avoided; correction of errors, time for, manner of; correct vocal expression, what it consists of, how it may be obtained; illustration of muscular movements to intensify expression; application of psychological principles.

Grammar and Composition.

In the study of language, two lines of procedure suggest themselves, the analytic and the synthetic. The principles discovered by the former systematized, form the basis of the science called grammar; of the latter, composition.

Grammar establishes principles and formulates rules by which the correctness of the use of word forms in a sentence to express a particular thought, may be tested.

Composition presents the principles and rules by which the different forms of discourse are constructed from sentences.

In grammar the sentence is the integral unit which is to be separated into its elements; in composition, the sentence is but a component element of discourse. All the principles of these sciences are conventional and based on reputable usage. The chief value of these studies is to give the student a ready and accurate use of language.

The aim of instruction in this department, is to enable the student to get a clear view of the relation of the sentence to the word and the discourse, and to enable him to proceed inductively to establish the principles and formulate the rules of etymology and syntax, and to train him to speak and write his mother tongue with facility and accuracy.

TOPICS FOR STUDY IN ACADEMIC WORK.

The sentence—considered as the expression of thought, as composed of elements, the symbols of ideas and relations; the sentence—classified as to the number of propositions, as to rank of clauses, as to manner of expressing thought; classification of its elements—as to rank, as to use, as to number of parts, as to expression of ideas or relations; sentences of each class treated as to capitalization, punctuation, arrangement of elements; elements of the sentence classified according to use, as parts of speech; modifications of parts of speech; proper use of tense forms and mode forms in principal and in subordinate clauses; correction of false forms; application of principles and rules of etymology and syntax by analyzing and parsing sentences connected in discourse, in prose and poetry, from many interesting selections; sentences in discourse treated as to their logical relations, as to the construction of the paragraph.

TOPICS FOR DISCUSSION IN METHODS.

Language lessons—object of, time devoted to, kinds, material from nature, material from literature; lesson giving—plans for, preparation for; use of pictures; connection of language lessons with primary reading; proper form of written work, its illustration, method of securing it; object of composition; awakening and sustaining interest; correcting errors; text-books—first use of, manner of using; connection of composition with literature; development of ideas of parts of speech, of their accidents; development of rules; graphic representation of relations of parts of speech in the sentence; value and limitation of parsing, of oral analysis, of diagrams; relation of grammar to logic.

ORTHOGRAPHY AND WORD ANALYSIS.

The work in this department comprises the study of correct representation of words by letters, correct utterance of words, the formation of words from roots and affixes, and their meaning as indicated by their component parts.

Its purpose is to give the student such a drill as will result in correct spelling, accurate pronunciation, propriety and precision of diction, and a ready comprehension of the meaning of words derived from the common roots and affixes.

TOPICS FOR STUDY IN ACADEMIC WORK.

Form of words; power of letters; accent; syllabication; capitalization; diacritical marks; roots and affixes—Latin, Greek, French, Italian, Spanish, Anglo-Saxon, miscellaneous; rules for spelling.

TOPICS FOR DISCUSSION IN METHODS.

Spelling—phonic, alphabetic, written, oral; the selection of words; the spelling book; rules for spelling, development of, use of; the writing speller; spelling in the several grades of the common school, manner of conducting it in each, time devoted to it in each; the spelling

reform; use of dictionary; analytic process; synthetic process; use of the laws of memory; plans for awakening and sustaining interest.

RHETORIC.

The point of view kept in this branch throughout is, that the study of rhetoric is the constructive study of literature, and the examples adduced at every point aim to show the usages of the best writers.

The teaching of the subject has three special objects; first, to impart something that shall be recalled by spontaneous association, and found useful when the student enters upon his life work; second, to arouse a desire for sober accuracy in thought expression; and, third, to enable him to see the truth for himself.

This is anterior to and apart from the superintendence of the student's work in composition, as a practical knowledge is induced fully as much by creating an impulse, and kindling a love for literature, as by criticising details of composition.

To cultivate observation, ease of expression, and regular habits of work, many themes will be given, advancing by easy steps from simple description to exposition and to the construction of argument.

A text-book furnishes a basis of procedure, but discussion is encouraged on the part of the student, the aim being not merely to ground the student in a knowledge of the various principles, but also, in each case, to base that knowledge on a practical philosophy, and to induce in his mind from the outset the habit of thinking for himself, and applying his thought to constructive and critical work.

TOPICS FOR STUDY IN ACADEMIC WORK.

Choice and use of words as to purity, propriety, precision; the sentence; the paragraph; the theme; variety of expression in prose, in poetry; figures of speech; style, its properties; kinds of discourse; versification.

TOPICS FOR DISCUSSION IN METHODS.

Relation of rhetoric to grammar, to literature; object of study of rhetoric; development of principles and formulation of rules; application of principles; selection of illustrations; correction of errors in students' style; use of text-book; supplementary work; composition.

LITERATURE.

The aim of instruction in this department, is to direct and to assist the student to read appreciatingly the masterpieces of the great authors, to guide him rationally and sympathetically into their thought and feeling, and assist him to profit by following the thoughts of master minds. As aids to this, short dissertations on the characteristics and philosophy of style will be given, and a constant application of the principles of rhetoric will be required.

A few of the authors generally conceded to be fairly representative of the status of the literature of their respective times, will be characterized; the history of literature briefly sketched up to time of the author whose works are to be discussed; the environment of the author considered, his influence upon literature brought out, his masterpieces characterized, and the student, so far as possible, led to appreciate its beauties and excellencies. This branch is to be studied in connection with history.

TOPICS TO BE STUDIED IN ACADEMIC WORK.

Beginnings of English literature; effect of Norman conquest; early modern English; Renaissance influence; Italian influence; characteristics of Elizabethan age; Puritan influence; revival of poetry; chief characteristics of American literature; classic selections to be studied critically—Chaucer's *Canterbury Tales*; Spencer's *Færie Queen*, first book; Shakespeare's *Julius Cæsar*, and also *Macbeth*; Irving's *Sketch Book*; selections from Bryant, Longfellow, Cooper, Emerson and Hawthorne.

TOPICS FOR DISCUSSION IN METHODS.

Selection of classics suitable for several grades of common school work and manner of presentation in each; characterization and criticism, oral, and in essay form; awakening interest; comparison of styles; connection of literature and geography.

Mathematics.

The work of this department is designed not so much to make the student an expert computist and accountant as to give him the power to reason vigorously, to enable him to proceed logically, and, also, to cultivate in him expression; not so much to assist him to memorize facts of processes, as to give power to grapple successfully with new difficulties by the application of principles mastered.

It is also the aim to connect each topic of study with as many objects of interest as possible, to point out their logical connection, and to require the student to put as much thought as possible with all mathematical drill, and thereby lessen the necessity of drill for the sake of training only.

The student is required to acquire a thorough knowledge of the processes, forms of expression, history and pedagogy of the several subjects comprised in this department.

NUMBER AND ARITHMETIC.

TOPICS FOR STUDY IN ACADEMIC WORK.

Percentage; ratio; proportion; involution; evolution; mensuration; series; progressions; the applications of each respectively.

TOPICS FOR DISCUSSION IN METHODS.

The child's first notions of number, how obtained, how expressed, how made the basis of number work; the use of objects, such as cards, counters and other devices, in teaching number, in developing the decimal system, in

developing the fundamental operations; the Grube method; which process, analysis or synthesis, is first manifested by the child; oral expression of analysis; written expression of operations, form and variety of them; numbers to be taught the first year, the second, the third; when text-books shall be first used, how; when fractions should be introduced; when concrete number exercises should be superseded by abstract; to what extent number may be correlated with other subjects; what relative time should be given to it; how accuracy may be obtained, rapidity; to what extent drill for rapidity is profitable; the logical order of presentation for each topic of study, the pedagogical; the best form of written expression for each operation; when definitions should be taught, rules, how; arrangement of topics in text-books; analysis, its logical forms of expression.

ALGEBRA.

TOPICS FOR STUDY IN ACADEMIC WORK.

Notation and definitions; fundamental operations; factoring; fractions; simple equations; simultaneous equations; negative results; involution; evolution; theory of exponents; radicals; quadratic equations; arithmetical series; geometrical series; proportion; maxima and minima; inequalities; indeterminate equations; Horner's Method of approximation.

TOPICS FOR DISCUSSION IN METHODS.

Suitable illustrations of the significance and use of symbols of operation, of relations, of quantities, of axioms; apt illustrations of the meaning of the terms, addition, subtraction, coefficient, exponent, and of all other technical terms used; geometric and graphic representation of the simpler expressions; concise and convenient forms for expressions of operations and relations; significance of transformations of equations; expression of formulæ in oral language; how to form an equation; interpretation of results; utility and power of algebraic investigations; history of algebra.

GEOMETRY.**TOPICS FOR STUDY IN ACADEMIC WORK.**

Logico-mathematical terms; geometrical concepts; straight lines and angles; triangles; quadrilaterals; other polygons; circles; proportion; mensuration of plane figures; similar plane figures; original demonstrations of theorems; planes; solids with plane surfaces; solids with curved surfaces.

TOPICS FOR DISCUSSION IN METHODS.

Basis of geometrical investigation, its value; illustration of logico-mathematical terms, of geometrical concepts, formation of them; forms of deductive reasoning; stages in a demonstration; practical application of principles demonstrated; value of the scholium; demonstration by superposition, by *reductio ad absurdum*, by theory of limits, by method of exhaustion, their value and interrelation; history of geometry.

Natural Science.

The aim of this department is to give the student a working knowledge of the fundamental principles of natural science, to acquaint him with systematic methods of scientific study and original investigation, and to enable him to become fairly expert in the construction and handling of simple apparatus, and to acquire facility in the use of such materials as can readily be obtained, and such as will be required in conducting the nature study lessons and the observation lessons in the country and district schools.

As far as practicable, the student performs his own experiments, and makes his observations at first hand. Original investigation, along proper lines, is encouraged, extra facilities being furnished when possible, and when time will permit.

BOTANY.

In pursuing the work comprised in this branch, the phænogamous plants are first studied, as being more easily handled by beginners. Terms are explained and learned as they are needed in the work, the botanical vocabulary being thus gradually acquired. A study is made of a series of typical plants, illustrating the characteristics of the various subkingdoms. The more important orders of phænogamous plants are studied in a similar manner. Whenever possible, use is made of actual specimens for illustration.

Throughout the course, attention is paid to structural botany and plant physiology. In this connection, use is made of specially prepared slides for use with the compound microscope.

The students are encouraged to prepare collections of the native flora, and to make original observations upon the germination and growth of common plants, and upon the time of blossoming, fertilization and disorders of native plants of the region.

Attention is directed to the economic value of plants, and of the science of botany.

TOPICS FOR STUDY IN ACADEMIC WORK.

Seeds; growth from the seed; roots; stems; leaves; flowers; the fruit; organs of cryptogams; typical plants illustrating the following groups, viz: algæ, fungi, bryophytes, pteridophytes, including ferns, horsetails and club mosses; gymnosperms; monocotyledons, with types of the more important orders; dicotyledons, illustrating as many of the leading orders as time and material will permit; relation of plants to practical life.

TOPICS FOR DISCUSSION IN METHODS.

Purpose of and plans for nature study; value of plant lessons—(a) formative value, (b) content value; awakening and sustaining interest; cultivating the pupil's powers of observation; obtaining suitable material; graded lessons for common schools; time to be allotted to study of plant life; work for different seasons and for different

localities; introduction and use of technical terms; cultivation of aesthetic taste; appreciation of harmony of color, form; procedure, value and limitation of representation by modeling and painting; use of text-book.

ZOOLOGY.

The work in this branch comprises a laboratory study of types of the more important groups, supplemented by discussions of fundamental principles, and by references to standard works on the subject in the school library. Instruction is given in methods of collecting and preserving insects and the skins and skeletons of birds and mammals.

TOPICS FOR STUDY IN ACADEMIC WORK.

The cell; the amoeba; points of difference between plant life and animal life; infusoria—types, paramoecium and vorticella; coelenterata—type, the common hydra; echinodermata—types, the sea urchin and the star fish; vermes—type, the earth worm; mollusca—type, the fresh-water mussel; arthropoda—types, the crayfish, the lobster, a scorpion, a spider, a grasshopper; vertebrata—type, the frog; a brief study of systematic zoology with introduction to the character and classification of the native insects, birds and mammals of Arizona.

TOPICS FOR DISCUSSION IN METHODS.

Kind and amount of direction by teacher; graded lessons for common schools; procedure, value, and limitation of representation by drawing and painting; purpose of, procedure in presenting, and time devoted to nature study lessons in the several grades of common schools; use of text-books.

PHYSIOLOGY.

The work under this head forms a continuation of the course in zoology. The general notions obtained during the study of comparative animal morphology are now discussed more in detail in connection with human anatomy and physiology.

The course is illustrated throughout by specimens, microscopic material, and by simple dissections upon small mammals, as the cat and the rabbit.

TOPICS FOR STUDY IN ACADEMIC WORK.

Proximate principles; cell structure; tissues; anatomy; the skeleton; the muscular system; circulation; respiration; nutrition; digestion; the nervous system; the skin; foods, waste and repair; hygiene; the care of the body; effects of stimulants and narcotics; the special senses; emergencies; first aid to the injured; hemorrhage; simple bandaging; poisons and their antidotes; disinfectants.

TOPICS FOR DISCUSSION IN METHODS.

Method of observing form of organs and their structure; illustration of functions of organs; dissection of small animals, and drawings and description of parts dissected; use and value of blackboard drawings; use of skeleton, manikin, casts, models; use of textbooks.

GEOLOGY.

This subject furnishes an abundant supply of material for nature study, and is thus especially valuable to the prospective teacher.

The course is intended to enable the student readily to recognize and distinguish the common rocks and minerals, and the geological formations of the vicinity, as well as to obtain a general idea of the operation of various geological agencies as factors in world building, and of the succession and development of life upon the earth's surface.

Field work by the class as a whole or in sections is a feature of the course, excursions being made at intervals to the various points of geological interest in the vicinity.

TOPICS FOR STUDY IN ACADEMIC WORK.

Dynamic geology—atmospheric agencies, igneous agencies, aqueous agencies; structural geology—igneous rocks, stratified rocks, metamorphic rocks, joints and fissures, faults, veins; mountains—origin, structure; his-

torical geology—Archæan era, Palæozoic era, Mesozoic era, Cenozoic era, Psychozoic era; systems of rocks; paleontology; local geology and mineralogy; laboratory study of rock specimens and fossils; practical geology, with reference to building materials, mineral deposits and soils.

TOPICS FOR DISCUSSION IN METHODS.

Preparation and presentation of subject matter for, and time devoted to nature study in the grades of the common schools; illustrations by diagrams and drawings; use of charts, maps and pictures; use of text-book and note-book.

PHYSICS.

The aim of the work in physics is two-fold; first, to give the student a knowledge of the theory of the constitution of matter and of physical laws governing its phenomena, and second, to acquaint him with the use of experimental methods in scientific study and investigation.

The laboratory method is used, the student being required to perform his own experiments.

Practical instruction is given in the construction and handling of simple apparatus, and in the methods of making a systematic record of observations.

The series of laboratory experiments includes both qualitative and quantitative work, and is intended not only to illustrate the text-book and class room work, but also to develop rapidity, neatness, and accuracy of manipulation.

TOPICS FOR STUDY IN ACADEMIC WORK.

The properties of matter; the mechanics of solids; composition and resolution of forces; laws of motion; work and energy; gravitation; accelerated motion; falling bodies; the pendulum; simple machines; mechanics of fluids; transmission of pressure; pressure due to gravity; barometer; air-pump; Boyle's law; the syphon; water pumps; specific gravity; heat; thermometer; conduction; radiation; mechanical equivalent of heat; mag-

netism, its nature and laws; magnetism of the earth; electricity; static electricity; electric machines; electric currents, their effects and measurement; induction; the dynamo; the electric light; the telegraph; the telephone; sound; character of wave motion, transmission and velocity; pitch; vibration, of strings, in pipes; harmony and discord; light, its nature, velocity, reflection, refraction; lenses; spectrum; color; microscope; telescope; camera.

TOPICS FOR DISCUSSION IN METHODS.

Preparation, presentation of, and time devoted to nature study lessons for the grades of common schools; illustration of the principles of the simple laws of physical science; simple devices for illustration; aid and direction from teacher, kind of, amount of; text-book, when and how used; note-book; use of representation, by drawing, by formula.

CHEMISTRY.

The course in chemistry is intended to be pursued in close connection with that in physics. The student applies his knowledge of experimental methods to the study of the laws of chemical phenomena. Some attention is devoted to practical chemical problems requiring mathematical computation. Three hours a week are devoted to laboratory work by the student.

TOPICS FOR STUDY IN ACADEMIC WORK.

A study of the laws of chemical action in connection with the properties, relations and compounds of the more important elements; oxidation; combustion; reduction; acids; bases; salts; reactions and their expression; a brief view of organic chemistry, with special reference to the chemistry of common life; oils and fats; action of soaps; cooking; fermentation; alcohol; carbohydrates; conservation of matter and energy; an introduction to the qualitative analysis of inorganic compounds.

TOPICS FOR STUDY IN METHODS.

Amount and kind of direction by teacher in experi-

mentation; preparation and use of simple appliances for illustration and investigation; selection of matter suitable to nature study lessons in the grades of the common schools; use of text-book; use of note-book; value and use of representation, by drawing, by symbols, by equations.

Geography.

Geography embraces so wide a range of subjects that it is found convenient to treat it under three heads, Physical, Mathematical and Political.

Physical Geography.

The course in Physical Geography is intended to give the student a clear understanding of the history and structure of the earth, and of the phenomena occurring upon its surface. The student obtains a broad view of the process of "world making" and the connection with it of each of the three great kingdoms, mineral, vegetable and animal.

The aim throughout, is to enable the student, as a prospective teacher, intelligently to explain the facts of geography, and also to furnish material for interesting and valuable work in the line of nature study.

TOPICS FOR STUDY IN ACADEMIC WORK.

The solar system, the earth as a planet, its motion, its magnetism; structure of the earth's crust, geological time, rocks, fossils; physiography, relief of the earth, causes, their operation, coral reefs and islands, volcanic phenomena, earthquakes; springs, rivers and lakes, drainage; ocean waters, tides and currents; the atmosphere; climate, its modification, winds, storms, cyclones and tornadoes; precipitation; glaciers and icebergs; atmospheric electricity; life upon the earth—(a) plant life, structure, physiology and classification of plants, geographical distribution, economic value; (b) animal life, classification

and distribution, commercial value; (c) the human family, classification, types, races, peoples, characteristics; mineral products, distribution, mining methods, economic value; geographical history of the United States, its physiography, coast line, drainage, climate, life and products.

TOPICS FOR DISCUSSION IN METHODS.

Development of ideas of place, position, distance and direction; ideas and names of physical features of home location, occupation of people, product of locality, forms of local government; representation by maps of locality of school, of town, of county, of territory; how to proceed from home geography to state; value of vivid description and graphic representation; appeals to the imagination; presentation of study of the earth as a whole; subdivision of the earth's surface—natural, artificial; use of textbook—time of, extent of, manner of; map drawing—place of, value of, manner of conducting; exhibition of products—natural, artificial; simple apparatus—construction, use; value of experiments; sand and clay models; use of maps, charts; graphic method of illustration as applied to comparative areas, wealth, industries, productions, temperature, rainfall; explanation of phenomena—day and night, change of seasons, weather; collection and use of specimens; additional reading—kind, amount; supplementary material; outlines; field observations; excursions; original notes on geology, geography and familiar weather phenomena.

Political Geography.

This study is treated as a part of history, and is pursued by the student in close connection therewith. The purpose of this instruction is to give the student a comprehensive view of the earth's surface as subdivided by man, and the changes wrought in developing its resources and utilizing its products to supply his wants.

TOPICS FOR DISCUSSION IN ACADEMIC WORK.

Political divisions; boundaries of countries; means of

travel; means of communication; commerce; manufactures; government; religion; occupations; productions—artificial, manufactured.

Topics for discussion in methods are found in Physical Geography and History lists.

Mathematical Geography.

The purpose of instruction in this branch, is to give the student an accurate knowledge of the figure, magnitude and motions of the earth, the means of determining the position of places upon its surface, the manner of delineating a portion of it by maps and charts, and a general knowledge of the relation of the earth, as a planet, to the solar system.

TOPICS FOR STUDY IN ACADEMIC WORK.

Shape of earth, proofs; its motion, effect of; earth's orbit; its axis; its inclination to its orbit; effect of its inclination; equator; parallels; meridians; latitude; longitude; polar circles; zones; tropics; astronomical terms; equinoxes; solstices; twilight; boundaries of political divisions.

TOPICS FOR DISCUSSION IN METHODS.

Use and construction of globes and other illustrative apparatus; maps; projection; illustration by charts, diagrams and pictures; taking north and south line; finding latitude and longitude; sun dial.

History.

The records of the struggles and progress of the human race toward development, furnish an inexhaustible supply of material for the exercise of mental activity. The chief value of historic study is to prepare humanity to profit by the triumphs and avoid the mistakes of the past.

History is closely connected with all other branches of study. It is pursued in connection with its more closely correlated branches, geography and literature. It is the aim, not only to teach the important facts of history, but to lead the student to discover the causes of events, to note the effect of physical conditions as determining the activities of man, and these in turn as fixing the habits which mold character; and also to note that the character of a people, to a great extent, determines their history.

TOPICS FOR STUDY IN ACADEMIC WORK FOR UNITED STATES HISTORY.

Political status of Europe at the time of the discovery of America; condition of the poor people of Europe at that time; characteristics of the age of discovery; claims of the Northmen; life and character of Columbus; discoveries and explorations—Spanish, English, French and Dutch; settlements—time, place, person, object, government, growth, peculiar characteristics and principal events of each; inter-colonial wars—cause, time, participants, principal events of each; life in the colonies—religion, education, home, dress, customs, occupations, modes of travel, means of communication; Revolutionary War—cause, time, principal events, principal actors, effects on the people, results to the nation; the growth of the nation; the confederation; the constitution; the first president; territory; acquisition of territory; financial policy; foreign policy; troubles with France; troubles with England; troubles with the Barbary States; War of 1812; Mexican War; Admission of new states; inventions; progress in arts and sciences; internal improvements; slavery; Civil War; political parties; labor movements; Indians; general prosperity.

TOPICS FOR STUDY IN ACADEMIC WORK FOR ANCIENT HISTORY.

History defined and classified; philosophy of history; aids to history; origin of nations; races of men; the world as known to the ancients; India; China; Egypt; Chaldea; Assyria; Babylonia; the Hebrews; the Phoenicians; the

Persian Empire; Greece—its geography, its people, their religion, heroic age, early growth of Sparta and Athens, the Peloponnesian wars, Spartan supremacy, Theban supremacy, Macedonian supremacy, architecture, sculpture, painting, literature, science, social life; Rome—the kingdom, the early republic, Punic wars, last years of the republic, the empire, decline and fall of the empire, civilization, social life, architecture, literature.

TOPICS FOR STUDY IN ACADEMIC WORK FOR MEDIAEVAL
HISTORY.

Migration of the Teutonic tribes; conversion of the Barbarians; fusion of the Latins and Teutons; Eastern Roman Empire; Saracens; Charlemagne; Northmen; use of Papal power; feudalism; Norman conquest of England; the Crusades; Papal supremacy; growth of towns; city republics; revival of learning; growth of nations and governments of Europe.

TOPICS FOR STUDY IN ACADEMIC WORK FOR MODERN
HISTORY.

Reformation under Luther; the English reformation and the Tudors; ascendancy of Spain; rise of the Dutch Republic; Huguenot Wars; Thirty Years' War; ascendancy of France; England under the Stuarts; rise of Russia; rise of Prussia; French Revolution; Napoleon; Congress of Vienna; German freedom; liberation of Italy; tendency of the British government; present state of European nations.

TOPICS FOR DISCUSSION IN METHODS.

Correlation of history and geography; correlation of history and literature; selection of subject matter suited to the several grades of common school work, and method of presentation in each; use of fairy tales, Bible stories, stories of adventures, biographies; when first to use the text-book, how to use it, use of historical novels, historical poems, poems containing historical allusions; use of reference books; historical essays written by pupils; application and exemplification of use of laws for aiding the memory; appeals to the sensibilities, especially, in teach-

ing patriotism; use of historical cards, charts, maps, pictures, and topical outlines.

Civil Government.

In our country, where the people elect the law-makers, the study of civics is a necessary part of the common school curriculum. The aim of instruction in this branch, is to give the student such a knowledge of the underlying principles and the workings of our government, as will enable him to give instruction in these matters, so indispensable to good citizenship. Special attention is given to the school law of Arizona.

TOPICS FOR STUDY IN ACADEMIC WORK.

Town and city government; objects of government; colonial government; Continental Congress; Declaration of Independence; Articles of Confederation; adoption of the Constitution, its amendments, its preambles; the legislative department of government; the Senate; the House of Representatives; the power of Congress; suffrage; restrictions upon the national government; the executive department; the judicial department; foreign ministers; foreign relations; Electoral Count bill; taxation; public schools.

TOPICS FOR DISCUSSION IN METHODS.

Use of diagrams and tabular outlines; use of reference books; value of memorizing; relation to history; classification; analysis; when taught; to what extent taught.

Penmanship.

Since the art of representing script forms is closely allied to that of other graphic representation, penmanship and drawing have been assigned to the same department of school work.

Students will be required to become accurate and rapid writers, and so thoroughly to master the analysis

and classification of forms, and the various movement drills, as to produce like results in their pupils.

TOPICS FOR STUDY AND PRACTICE.

Form, proportion, relative size, and shading of standard letters; Arabic figures; punctuation marks; spacing in words and sentences; indentation of paragraphs; Roman notation; signs and symbols used in school work and ordinary business.

TOPICS FOR DISCUSSION IN METHODS.

Method of teaching writing in grades; styles of writing—vertical, semi-angular, running hand; value of movement drills, of unison of movement, of analysis of forms; position; how to obtain rapidity; place and value of blackboard writing; slate writing; age at which the child should begin to write; time given daily to writing exercise.

Drawing.

This course comprises elementary work in each of the three departments, Pictorial, pertaining to the appearance of objects; Mathematical, pertaining to the facts of objects; and Decorative, pertaining to ornamentation.

The work is designed to cultivate the taste of the student, to stimulate his powers of observation of material things, to contribute to his pleasurable resources, and to enhance his teaching power.

The student is required to gain such a knowledge of drawing as will enable him to make simple, freehand drawings of objects, singly and in groups, rapidly and accurately, on the blackboard and on paper; to make simple working drawings; and to design ornamental patterns for surfaces, borders, and center pieces.

TOPICS FOR STUDY IN ACADEMIC WORK.

Type forms, foreshortening, laws of perspective, light, shade, shadow, use of drawing implements, conventionalizing.

TOPICS FOR DISCUSSION IN METHODS.

Eye training; pencil holding; position; materials; clay modeling; matter, kind, quantity; time and method of presentation.

Bookkeeping.

Double entry bookkeeping and its modifications to suit the needs of the various kinds of business, are carefully taught. The theory and relation of double entry and single entry are fully discussed. Business usages and the common principles of commercial law are also taught.

TOPICS FOR STUDY IN ACADEMIC WORK.

Abbreviations; signs; classification of accounts; double entry; day book; journal; posting; closing ledger; commercial forms; bill books; invoice book; shipments, account sales; partnership; joint stock; farm accounts; balance sheet.

TOPICS FOR DISCUSSION IN METHODS.

Illustration of terms, of forms, of rulings, of day-book entries, of journalizing, of posting, of closing ledger, of balance sheet, of bill-book, of order-book, of time account.

Physical Education.

Physical vigor is believed to be essential to the best mental effort. Health of body and mind, grace of movement and symmetry of form, are best acquired and preserved by judicious exercise. To secure this end, daily physical exercise, under the supervision of a tutor, are required of every student. These drills consist of postures and movements calculated best to secure the objects for which they are designed.

Marches and movements are regulated by music.

The students are given instruction in this branch, to such an extent and in such a manner, that they will be able to carry forward this work, successfully, in their schools.

Music.

Instruction in this branch comprises vocal music only. Its aim is to give such a knowledge of the elements of music, and such practice in singing, as will enable the student to conduct singing exercises in the common schools, and to inspire the pupils with a love for this refining and ennobling art.

Psychology.

The course in this branch begins the first quarter of the second year. It precedes the special instruction in methods of teaching the several branches comprised in the public school curriculum. It is designed to prepare the student to receive such instruction with profit.

Its aim is to aid the student in developing the power and fixing the habit of observing, analyzing and interpreting the physical phenomena attendant upon the mental activities and states. This study is pursued, as far as practicable, inductively. The observation of the manifestation of mental powers and conditions is directed chiefly to the child.

Students are also made familiar with the technical terms peculiar to this science, in order that they may express themselves clearly as well as understand the discussion of methods based upon it.

The work of the elementary course deals with the elements of psychology, comprising investigation of the general nature of the mind, the basis of psychic life, stages of knowing, characteristics and conditions of feeling, conditions and modes of consciousness, and elements of volition.

The work of the advanced course is a more comprehensive investigation and discussion of the whole subject, and is intended to give the student such a knowledge of the states, powers and activities of the mind, their interrelations and the laws governing their growth, as will

enable him to pursue a rational course of procedure in his professional work.

TOPICS FOR STUDY.

The senses—cephalic and somatic; nervous organisms; psycho-physics; consciousness—its conditions, limits, facts and modes; immediate knowledge—perception, self-perception, intuition; mediate knowledge—representation, memory, imagination, thought; feeling—emotion, desire; volition—elements of, freedom of.

LOGIC.

Logic, being a subordinate branch of psychology, is given considerable attention in this connection. Since teachers are expected to train their pupils in the art of reasoning, a knowledge of the laws and principles of logic are a necessity to them.

TOPICS FOR STUDY.

Terms; fundamental axioms; genus; species; differentia; abstraction; generalization; proposition; arguments; syllogism; figure; modes; fallacies; Aristotle; Bacon.

ETHICS.

Ethics is also studied in this connection. The purpose of this work is to give the student clear ideas of the principles which should govern human actions and the moral duties of right conduct, so that he may be able to practice them and impress them upon his pupils.

TOPICS FOR STUDY.

The Socratic, the Pauline and the Herbartian ideal; influence of home, church, school; instruction; government; discipline; feeling; reason; will.

Child-Study.

While the study of psychology is pursued by means of the texts embodying the results of the observation, in-

vestigation and experience of others, and by introspection, the student is encouraged to observe the manifestations of mental conditions in others, and especially in children. Child study on the part of the student tends to lead him to a more accurate knowledge of the laws of mental growth and activity, and to bring him into deeper sympathy with children, as well as to fix the habit of careful observation of the physical phenomena attendant upon mental conditions. In this work the student is aided by helpful suggestions based upon recent investigation and the present knowledge of this science.

TOPICS FOR STUDY.

Physical condition—whether normal or abnormal; psychic activities—power and direction of each; contents of the child's mind at age of entering school; social sense; ideas of right and wrong; childrens' fears; effect of school work on the health; vocabulary of children.

Philosophy of Education.

Education is conceded to be a science, when considered in reference to the fact, that all school work can and should be based on principles, rationally determined and accurately defined.

The aim of this branch of study is to define the nature, aim and limits, and the fundamental principles of education; to discuss the problems of physical, intellectual, and moral development and training; to make each student a teacher who shall be able logically to determine method in school work—one who will not accept formula as method, but shall be able to be governed by method in adopting formula.

TOPICS FOR STUDY.

General idea of education—its ideal, nature, form, limits, kinds, means, agencies, psychological epochs; logical order; habit; educational values of studies respectively; interest as an element in selection of studies; order of

succession of studies; basis of correlation of studies; relative time to be given to each study.

Methods.

Methods, as the term is here used, comprise a recognition of underlying principles of right procedure in education, and in the discussion of plans suitable for their application, in teaching the several branches of public school studies.

The student will be constantly encouraged to test all conclusions, now generally received, in regard to teaching, in the light of the present knowledge of psychological principles, and to state clearly the principles that his investigation verifies, and to work out plans for the application of these principles, in teaching all the common school branches of study.

TOPICS FOR STUDY.

Basis of method; method—analytic, synthetic, inductive, deductive; attention—aims and hindrances, intensity; instruction—aim of distinguished from training; lessons, order and plan of presentation; stimulation, and guidance; questioning; criticisms; special methods for each branch of the public school curriculum.

History of Education.

In a general sense, the history of education is the story of the growth and development of the human race; but in this course of study, the term will be restricted to a brief sketch of the ancient systems of education; the schools of mediaeval and modern times; a study of the lives of the most noted educational reformers, and the principles advocated by them; a comparison of the school systems of the present time; a special study of the schools of some state of the union.

TOPICS FOR STUDY.

Educational system—of antiquity, of Greece, of Rome, of the early Christians, of the sixteenth Century; Jesuit Schools; Comenius; Pestalozzi; Froebel; origin of lay and national education; systems of education of the nineteenth century; rise and progress of education in the United States.

School Management.

Instruction in this branch is given mostly by lectures. The discussions cover the whole field of organizing, governing and conducting primary and grammar schools. Its aim is to develop a system of control that shall be in harmony with the principles set forth by the new education, and to make the student skillful in the performance of the various duties of the school room, by plain, practical and suggestive lessons, rather than by the presentation of elaborate theories.

TOPICS FOR DISCUSSION.

Elements of successful management; educational instrumentalities; school organization; school government; courses of study; programs; study; class management; recitation records; examinations; keeping records; reports; promotions; graduation; graded schools; supervision; conditions of educational progress.

Observation and Practice.

All students are required to observe the illustrative lessons given by the critic teacher, for the purpose of exemplifying the application of psychological laws to methods; to note the manner, order, and steps of procedure; to discover the psychological principles upon which they are based; to outline plans for conducting recitations; to criticise the plans and teaching of other students; to teach the practice school for forty minutes a day for one semester.

The purpose of this, is to lead the student to correct methods; to assist him in eradicating his faults; to cultivate in him taste and discrimination in originality of procedure; to enlarge his conception of the work.

TOPICS FOR STUDY.

School tactics; elements of governing power; class management; school regulations.

Theses.

In the profession of teaching, there is a demand for fuller investigation, greater originality in the application of principles, and a clearer expression of the results of individual experience, if the teacher is to be more than a mere imitator. Every person, before entering upon the duties of the teacher, should evince a lively interest in all matters pertaining thereto; and should be able to discuss intelligently, the leading educational topics of the present time. Before graduation, every student is required to prepare and present to the faculty a thesis on some educational topic approved by them.

General Information.

DESIGN.

The legislative enactment providing for the organization of this school, also states the design and purpose of its establishment. It is as follows: (Chap. III, Par. 2515, Sec. I, Code of Arizona.) "That a Normal School for the Territory of Arizona is established at Tempe in Maricopa County, Arizona, the purpose of which shall be the instruction of persons, both male and female, in the art of teaching, and in all the various branches that pertain to a good common school education; also to give instruction in the mechanical arts and in husbandry and agricultural chemistry, in the fundamental laws of the United States, and in what regards the rights and duties of citizens."

LOCATION.

Tempe, the site of this school, is situated in the beautiful valley of the Salt River, seven miles from the Capital. It has railroad connection with the Southern Pacific and the Santa Fe systems by the Maricopa and Phoenix R. R., and the Maricopa, Phoenix and Salt River R. R.

The climate during the whole school year is delightful. The school is in the midst of an intelligent and moral community, engaged in farming and fruit raising. Six church societies hold services in this city.

BUILDINGS AND GROUNDS.

The campus includes twenty acres; the north half is set with shade and ornamental trees and shrubs. On this part of the campus the buildings are situated.

The building now used for school purposes, was erected in 1886, and is a one story, brick structure, seventy feet long and sixty wide, with a broad veranda entirely

surrounding it. The new building stands about sixty feet north of it, and is one hundred thirty-five feet long, seventy-four feet wide and three stories high; the lower story is of brown stone, the other two of red pressed brick with brown stone trimmings.

This edifice is beautiful in architectural design, convenient in arrangement, and substantial in construction.

A sufficient number of rooms will be finished and furnished for the accommodation of the school early in the school year of 1896-97.

APPARATUS.

The school is provided with excellent apparatus for illustrating the principles of the natural sciences taught. Additions will be made from time to time, as the advancement of science and the needs of the school demand.

LIBRARY.

The library now contains more than seven hundred volumes, covering the fields of history, science, education and general literature. Many of the valuable publications of the Smithsonian Institute, as well as the reports of the Commissioner of Education, and statistical reports of the Interior department, are found on its shelves. It is supplied with reference books sufficient for the present needs of the school. Many of the principal educational publications are received regularly and kept on file for use of students.

MUSEUM.

The museum already contains many valuable pieces of archaeological relics, and a large number of interesting specimens of animals, plants and minerals, characteristic of Arizona, such as copper, silver, gold, and lead ores, native insects, birds, small animals and plants; in fact, a valuable nucleus of a museum of such a wide range of interesting specimens as Arizona alone can produce.

During the past few years, many friends of the institution have contributed valuable articles. Their generosity

and interest in the museum are appreciated and hereby acknowledged. The students have taken great interest in the museum and have contributed much to its success.

Contributions are solicited. Transportation on articles donated will be paid by the school. All packages should be addressed, "Territorial Normal School, Tempe, Arizona."

LITERARY SOCIETIES.

There are two literary societies connected with the school, the Zetetic and the Hesperian.

The public meetings of each are held fortnightly, on alternate Friday evenings, and are conducted according to parliamentary usages. They are designed to acquaint their members with the customs and practices of deliberative bodies, to give an impetus to literary investigation, and to develop a talent for literary work, public speaking and extemporaneous discussion. The members of the Faculty are honorary members of these societies. Students who creditably perform their duties as members of one of these societies are excused from a part of the regular rhetorical exercises in the school.

LECTURES.

In addition to the lectures given by the Faculty, a series of entertainments of a high order, mostly lectures, is arranged each year. They have been a source of great profit and pleasure to the students.

The frequent appearance of prominent people on the rostrum at the opening exercises, most of whom favor the students with short, eloquent and instructive addresses, is a pleasant feature of the school.

READING ROOM.

As soon as a sufficient number of rooms is finished in the new building, one will be set apart as a Reading Room, in which will be found the better educational and literary periodicals, a few metropolitan dailies, and most of the weekly issues of the newspapers of the territory.

ADMISSION.

Candidates for admission to the Normal Department must be fifteen years of age, and must possess a fair knowledge of the academic branches of study required for a second grade county certificate, before they will be permitted to enter upon the work of this department.

Candidates for admission, holding second grade county certificates, will be admitted, without examination, to the classes beginning the work of the first year of the course.

Candidates for admission, holding territorial or first grade county certificates, will be admitted without examination to the classes pursuing the studies of the second semester of the first year of the course.

Certificates of standing, from an accredited high school or grammar school, evidencing the scholarship of a candidate for admission, will exempt the candidate from examination in the branches so vouched for.

Examinations will be held the first and second days of each quarter for the accommodation of the applicants for admission at that time, and also, at other times when the circumstances seem to warrant it.

Candidates for admission, not fully qualified to enter the normal department, can always find classes suited to their advancement in the model school, to which a limited number will be admitted.

Candidates for admission to any department of the normal school or model school, should provide themselves with certificates of scholarship from the teacher of the last school which they attended. Such certificates aid the Faculty materially, in assigning students to proper classes.

Like all educational institutions, especially in a new country where pupils have limited advantages, The Arizona Territorial Normal School has been obliged to give a certain amount of preparatory instruction; but as the work of its graduates becomes generally felt in the schools of the territory, candidates, as a class, are better prepared to enter the school. This condition makes it possible to

raise the standard of requirements for admission. During the year, no pupils have been admitted who were not qualified, at least, to do the work of the lowest classes formed this year for students heretofore in attendance.

EXPENSES.

Board can be obtained in good families at from \$15.00 to \$20.00 a month; in clubs for much less. By hiring rooms and doing their own cooking, students are able to make the cost of living conform closely to the expenditure which they desire to make. It should be borne in mind in this connection, that fruit, garden vegetables and other table supplies are much cheaper in this vicinity than in any other part of the territory. Little fuel is needed. Rooms can be rented at a cost, per pupil, of from twenty-five to fifty cents per week, provided that two persons occupy one room.

The Alpha Boarding Club has furnished its members good board at \$8.50 per month per capita; this includes table supplies, expense of cook, fuel, etc. The members have been supplied with good rooms at \$1.25 apiece per month, where two occupy one room, making a total for room, board, lights and fuel of \$9.75 a month for each student.

The cost of books and stationery ranges from \$10.00 to \$15.00 a year.

An incidental fee of fifty cents a month is charged each student.

Examination paper, pens and ink are furnished the students free of cost.

TUITION.

Tuition is free to all students who sign the declaration of intention to teach in Arizona, and to those who obtain an appointment from a member of the legislature. All others are charged \$1.00 a month.

ADVANCED STANDING.

Candidates for advanced standing will be given a final examination on any subject comprised in the academic

work of the course, at such times as the Faculty may be able to appoint.

The Territorial University, and the Los Angeles Normal School have arranged with this school for the mutual acceptance of grades and standing in scholarship of students. Similar arrangements will doubtless be made with other schools of like grade.

DIPLOMAS.

In order to receive a diploma, a student must have attained the age of eighteen years, must have attended this institution at least twenty-two weeks, and must have passed a rigid examination in all the studies of the course. If it appears from the records of examinations, daily recitations, and deportment, that the applicant for graduation possesses the learning and qualifications necessary to teach a good common school, such applicant shall receive a diploma that will entitle the holder to teach a primary or a grammar school in any county in this territory. This diploma is valid for life.

DISCIPLINE.

Self government, guided by a strict regard for the rights of others, and a delicate appreciation of the proprieties of one's environment, is the only kind of government capable of developing and fostering the conduct and character requisite to make the successful teacher.

It is the purpose of this Faculty, to inculcate correct ideas of conduct, to stimulate a healthy sentiment in regard to it, and to make the students self-respectful, self-helpful, self-reliant and self-governing. All students whose best endeavors are not in harmony with this purpose are dismissed from the school.

REGULATIONS.

Absence from any required exercise must be accounted for before a student can be permitted to enter a succeeding recitation.

Students will not be permitted to take any work outside of their regular classes, without the express permission of the Principal.

Students will not be permitted to take studies out of their regular order except by express permission of the Principal.

Students will be classified as first year students till they have obtained one-third of the credits of the whole course; as second year, two-thirds.

TEXT-BOOKS.

In the year 1895-96, the following named books were used: Arithmetic, White's Complete, Wentworth and Hill's High School; Botany, Gray and Coulter's; Book-keeping, Williams and Roger's; Chemistry, Mead's; Civics, Andrew's; English Literature, Shaw's; Ethics, Peabody's; Geography, Political, Harper's; Geography, Physical, Appleton's; Geology, LeConte's; Geometry, Wentworth's; Grammar, Conklin's; Grammatical Analysis, Green's; History, General, Swinton's; History of Education, Quick's; Physiology, Tracey's; Physics, Avery's; Psychology, Putnam's; Rhetoric, Hill's; Reading, Cumnock's; Zoology, Holder's.

Normal School text-books can be purchased in Tempe at reasonable rates.

Students are advised to buy no text-book till after consultation with the Faculty, and to bring with them for reference, such text-books as they may possess.

APPOINTMENTS.

It is greatly desired that the members of the Legislature, respectively, appoint students to the Normal School, as authorized by law; and that County Superintendents, and all others interested in supplying the schools of this territory with well educated and properly trained teachers, should recommend to this school persons who desire to become teachers and who give promise of usefulness in that profession.

ALUMNI.

It is confidently believed that all graduates of this school will manifest a lively interest in its welfare. Their influence on the schools of the territory is already plainly seen and it will doubtless increase as they increase in experience and numbers.

The Faculty desire to be informed of the success of the graduates and also to render them professional assistance as far as possible.

THE ARIZONA NORMAL ALUMNI ASSOCIATION.

This society, as its name indicates, is composed of graduates of this normal school. It holds two regular meetings each year, and an annual banquet the next day after commencement. Its officers for 1895-96 are Jas. H. McClintock, class of '87, President; Anna R. Stewart, class of '94, Secretary.

TEACHERS' BUREAU.

The Faculty do not wish to be understood as agreeing to furnish employment for their students upon graduation, but feel warranted in saying, that they have many opportunities of recommending teachers to good positions, and that they are pleased to do so, thereby rendering a service, mutually helpful to their students and to school officers desiring to employ teachers.

To County Superintendents and School Trustees:

The Principal of this school, when requested, will take pleasure in furnishing to school officers, accurate information in regard to the fitness of students and alumni of this school to teach; and also, when desired, will put them in communication with teachers seeking employment.

In order to be able intelligently to recommend a teacher to a position, it is necessary that the Principal be in possession of a full, detailed statement of the requirements of that position and its surroundings.

TO STUDENTS.

Students from the north, will find three railroad trains and three stages running daily from Phoenix to

Tempe; from the south, one train daily from **Maricopa** to Tempe; from the east, two trains daily from **Mesa** to Tempe.

Students, by calling on the Principal on their arrival at Tempe, will receive such information and aid in regard to securing rooms and board as he may be able to give them.

CORRESPONDENCE.

All correspondence in regard to the management of the school, expenses of living, conditions of admission, etc., and all applications for catalogues and announcements should be addressed to

JAS. McNAUGHTON,
Tempe, Arizona.
