Classification of Courses

course numbering system

Lower-Division Courses

Lower-division courses, numbered from 100 to 299, are designed primarily for freshmen and sophomores. Certain classes are closed to freshmen who lack the designated prerequisites or whose majors are outside the units offering the courses. This information is available in the course catalog [1] or from the student's academic advisor.

Upper-Division Courses

Upper-division courses, numbered from 300 to 499, are designed primarily for juniors and seniors. Prerequisites and other restrictions should be noted before registration. Courses at the 400 level apply to graduate degree requirements for some graduate programs when approved by Graduate Education.

Graduate-Level Courses

Graduate-level courses, numbered from 500 to 799, are designed primarily for graduate students. However, an upper-division undergraduate student may enroll in courses numbered 500-599 with the approval of the student's advisor, course instructor, department chair and dean of the college in which a course is offered. If such a course does not meet an undergraduate graduation requirement, it may be eligible for use in a future graduate program on the same basis as work taken by a nondegree graduate student. See graduate credits earned by undergraduate students [2].

omnibus courses

Omnibus numbers are used for courses offered on an experimental or tutorial basis or for courses in which the content is new or periodically changes. Academic units use their prefixes with omnibus course numbers. The general nature of the work required for a particular omnibus course is consistent from unit to unit, but subject matter varies. Omnibus courses are often offered for a variable number of credit hours.

Within the academic catalog and course catalog, abbreviations are frequently used with a colon to introduce specific omnibus course topics (e.g., MGT 494 ST: Cultural Factors in International Business). See the omnibus course abbreviations.

Visiting Student Program

The numbers 597, 697 and 797 in the LAW prefix have been reserved for the visiting student program in the Sandra Day O'Connor College of Law.

Study Abroad Programs

Courses with the prefix SAO are reserved for participants in partnership and exchange study abroad programs through the Study Abroad Office. This is a placeholder course that remains on the student's academic record until the student's record is updated by SAO following the completion of the student's study abroad program. This course will be dropped and will be replaced with the ASU courses, credits, and grades equivalent to the course work completed abroad. Students must register for at least the number of credits equivalent to full-time study at ASU (i.e., 12 credits for undergraduate students and nine credits for graduate students during the fall and spring semesters, or one to six hours during the summer session). Students participating in an SAO partnership program must register for the subtopic "SAO: Study Abroad Program;" participants in an SAO exchange program must register for the subtopic "SAO: Exchange Program." Note: The SAO placeholder course is not an indication of the level of course work or the total number of credits the student may complete abroad.

Course Component	Description
Individualized Instruction (IND)	A class in which an individual student is provided an opportunity for original study or investigation in a major or field of specialization on a more autonomous basis. Normally a contract or plan is used and supervised by faculty and/or practitioners.
Integrated Lecture/Lab (LEL)	Integrated lecture/lab is a class that has some lecture and some hands-on components but do not require a separate time like a traditional lab.
Laboratory (LAB)	The hands-on, workshop component of a class usually held in a laboratory. The laboratory time is separate from the lecture although it is often associated to a lecture(s).
Lecture (LEC)	A traditional method of instruction in which students are taught a subject by a member of the faculty.
Practicum (PRA)	Structured practical experience in a professional program, supervised by a practitioner and/or faculty member with whom the student works closely. Internships and student teaching fit into this category. These classes are often held off campus at a professional location.
ProMod (PRO)	In ProMod courses, the role of lectures is deemphasized in favor of learning based on projects. The learning is driven by the needs of the project, not by predetermined lecture topics. Students will go where the questions take them, leading to an individualized exploration for the issues at hand.
Recitation (REC)	Recitations are small interactional meetings that combine formal presentations, review, and interaction between the students and an instructor. These are small interactional meetings and are usually combined with a lecture as the primary component. Recitations are often lead by teaching assistants (TAs) or graduate assistants (GAs) to supplement a lecture. TAs/GAs review the lecture, expand on the concepts, and usually allow for question/answer time.
Research (RSC)	Under the supervision of a faculty member or group of faculty, student conducts research that is expected to lead to a specific project such as dissertation, thesis, report, or publication. Assignments might include data collection, experimental work, data analysis, or preparation of a manuscript.
Seminar (SEM)	A small class emphasizing discussion, presentations by students, and written research papers.
Studio (STO)	A hands-on workshop component of design and the arts courses.

AIS	501	American Indian Studies Paradigms	American Indian Studies emerged as an academic discipline in the late 1960s in part because of increasing dissatisfaction among Indians about the works of historians, anthropologists, and other scholars that was very often marred by methodological and conceptual flaws. AIS	512	Historical Trauma, Healing, and Decolonization	In recent years, scholars have begun to explore the prevalence of historical trauma among American Indian communities. As a result of this violence and oppression, they have developed models of recovering healthy nations while challenging violations of their human rights in the domestic and international arenas. This history has given rise to a widespread cultural revitalization movement often referred to as decolonization. Scholars from an array of academic disciplines are producing a growing body of literature about decolonization. Course explores these issues and dynamics and challenges the student to examine the unique identity and contributions of urban Indians. AME	310	Media Literacies and Composition	When we integrate computational systems into the core of our cultural and social practices, we reinvent how we tell stories. The roles of creators, critics and audiences are blurring at the same time that digital tools allow us to infinitely reproduce and remix narratives, radically changing what we mean by the "work" or "text." These new media platforms empower us to create, share and respond to cultural narratives that defy traditional notions of how stories operate, demanding new literacies. Explores our powers and responsibilities as readers, writers and creators of new cultural languages, including new forms such as games, digital video, electronic literature and social media. Students study relevant media narratives and cultural ecosystems from the 20th and 21st centuries, acquiring a set of literacies that they hone through practices of authorship, critique and collaboration, culminating in the presentation of their own digital media narratives.	N	LEL	N	GNA	Herberger Inst Design & Arts	Arts, Media and Engineering Sch T	3		Prerequisite(s): Digital Culture major; minimum 45 hours. Credit is allowed for only AME 310 or AME 394 (Media Literacies & Composition)
AME	320	Motion Capture for Integrative Systems	Presents the broad principles and techniques for movement study in oneself and others that includes applied, dynamic anatomy. BIO	112	Discovery: Why Sex?	"Why?" is a question that animates the youngest of children to the most seasoned of scientists. The acts of asking and answering "Why?" highlight the integrated nature of scientific knowledge and discovery. Demonstrates scientific disciplines are not walled cities in which knowledge is neatly segregated from lines of inquiry and knowledge in other disciplines. Instead, scientific concepts weave throughout and between disciplines and scientists increasingly rely on colleagues from different scientific fields to find answers to scientific questions. So our journey to find responses to the question "Why Sex?" takes us not just to biology, but also to earth science and to physics. Along the way, scientists are linked together not only through concepts that crosscut the disciplines, but also in their reliance upon key scientific skills such as the ability to observe, think critically, measure, gather data and communicate their findings. Includes an in-depth discussion of scenarios for the next 50 and 100 years, which articulate costs and benefits of alternative development pathways in terms of climate change, food production, clean water and biodiversity. Scenarios of change in biodiversity lead to the topic of the consequences of biodiversity change for the functioning of ecosystems from the point of view of their productivity and stability. CDH	501	Digital Humanities: Critical Theory and Methods	Digital technologies are now intricately woven into our lives--whether it's in terms of authoring a paper in a text editor, sending texts and emails, or doing data analysis. Popular narratives of the "big" and the "new" celebrate and sometimes bemoan the ways that these tools shape our communication, access to information, habits and even our physical bodies. Focuses on the histories of these technologies, their operations, popular conceptions about such tools, and their affordances and limits for humanities scholarship. Students learn how to leverage digital technologies, but also how to critically read them. Broad ranging; in addition to surveying the "big tent," students are encouraged to utilize their final projects to engage with specific disciplinary digital tools and methods relevant to their scholarly work. EMS	507	Strategic Sustainability II	As sustainability becomes a core strategic goal of any organization, it impacts all aspects of the organization from informing risk and reward to the definitions and dimensions of innovation and overall success. Uses reframing, re-visioning and backcasting via a sustainability lens as constructs for introducing strategic sustainability across all aspects of an organization—both internally and externally. Applies various methods such as natural capitalism, design for sustainability/method of sustainable product design, Anderson method, cradle-to-cradle and framework for strategic sustainable development to develop flexible action platforms for sustainable enterprises. Students create a strategic vision, action plan for an organization, including critical external partnerships with communities and institutions. EMS	508	International Immersive	The international immersive experience takes place in a compelling location where all the challenges and opportunities of sustainability are in play. It is designed as a dynamic vehicle to make real-world connections to sustainability leaders, projects and communities, and is among the most memorable experiences of the program. Students "see" and "feel" sustainability from another country and culture's perspective and see the overlap and conflict to their own context. Extending one's professional network to other host countries and generating a reflective experience and analysis report are experiential learning artifacts that are generated from this experience. Collaborative teams work through a sustainability case study and present their solutions.	N	SEM	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 506, 507
EMS	509	Communications and Sustainability II	Marketing and communication professionals in all industries are attempting to keep up with the rapidly expanding landscape of multichannel communications. This is especially true in sustainability, given that the Chief Sustainability Officer must understand and appreciate the modes of communications across all platforms, not just in the consumer market. Maps internal, external and target audiences/markets; strategizes channels to reach them with sustainability stories; and creates a multichannel communications plan that incorporates modes of engagement for all audiences.	N	LEC	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 506; EMS 507; Corequisite(s): EMS 510
EMS	510	Sustainability Leadership II	As sustainability emerges as a core strategic platform for an organization, leadership and sustainability intertwine; leadership opportunities--and responsibilities--greatly expand; thus requiring innovation. Individual leadership and organizational leadership are asked to find opportunity via extended definitions of critical systems; value webs, increased roles for diverse internal and external partnerships, and the need to lead within increasingly complex and unpredictable global systems. Engage students to challenge their prior definitions of systems, responsibility and community from the perspective of sustainability and leadership and provides a toolbox for leading with sustainability as a fundamental success platform.	N	LEC	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 506; EMS 507; Corequisite(s): EMS 509
EMS	511	Global Context III	Sustainability leaders help their organizations recognize when material issues require solutions that extend beyond their control or capabilities, and when to look for, participate in and potentially lead industry, cross-industry, regional or other collaborative approaches. Global sustainability context becomes an increasingly proactive concept where individual and organizational responsibility and success extends to a global scale. Organizations organize themselves as agents of change toward sustainability that aligns with more traditional organizational success. Students learn from successes and failures of current and past attempts and assess the implications for this change in leadership perspective to their organizational context.	N	LEC	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 509, 510. Corequisite(s): EMS 512
EMS	512	Strategic Sustainability III	Organizations that aim at sustainability come to recognize that they must be part of sustainable success on all scales, from local to global, from internal to external and for today and tomorrow. Tools such as resource plans, investment pathways, stakeholder engagement and policy influencers set the theatre for sustainability-oriented organization to challenge the status quo and advance agendas that embed both success and sustainability. Students apply their enhanced strategic sustainability skills to examine select case studies on international sustainability in corporate and nongovernmental agencies.	N	LEC	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 509, 510. Corequisite(s): EMS 511
EMS	513	Communications and Sustainability III	Most stories of sustainability are driven and told with data as its central character. Unfortunately, data is nearly meaningless to our minds unless it is placed in an illuminating human context. The best chief sustainable storytellers bring meaning to data through the use of metaphor brought to life by thought-provoking narrative. Story grips the mind and propels people forward. Students develop proof of concepts for campaigns, expand social media presence and influence, create and record a 20-minute presentation in the style of a TedTALK, and become a leader in sustainable communications.	N	LEC	N	OPT	School of Sustainability	School of Sustainability	2		Prerequisite(s): EMS 511; EMS 512; Corequisite(s): EMS 514
EMS	514	Sustainability Leadership III	Lasting, sustainable change fully takes hold once ownership and accountability extends well into the organization and community. Engages the student to identify and apply pathways to inspire, persuade and influence others to act toward a shared global vision. Future orientation, reframing organizations to be globally scalable and still be locally focused, leadership best practices for diverse, multinational, and international human talents and redefining success and growth using sustainability as a success lens are great tasks that sustainability leaders face. ENG	205	Introduction to Writing, Rhetorics and Literacies	How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? Three fields of study take this kind of questioning especially seriously: studies in writing, studies in rhetoric, and studies in literacy. Inquiry--that persistent, deliberate commitment to question and to build methods sufficient to that questioning--is a generative force in each of these fields of study. Familiarizes students with such questioning traditions and to help them judge for themselves what each is good for. The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. Quite simply, then, this is a course in asking good questions and in evaluating responses to situations that spur questioning. ENG	390	Methods of Inquiry	Studies in writing, rhetoric and literacy are multiple and diverse because these areas deal with complicated ways people create meaning, circulate meaning, and understand meaning in a variety of contexts and a variety of modal formats. Examines ways of developing research problems and questions, designing studies and conducting, reading and evaluating research in the areas of writing, rhetoric and literacy. Qualitative methods (e.g., case study, ethnographic methods, interviewing); historical methods (e.g., archival, document analysis and artifact interpretation); rhetorical analysis and discourse analysis; feminist approaches to research and analysis; and recent advances in research in the fields of rhetoric, writing and literacy studies. Investigates the many attitudes and assumptions about creativity and cultural work that make methods of inquiry as controversial as they are significant to contemporary public life.	N	LEC	N	GNA	Liberal Arts and Sciences	Department of English	3		Prerequisite(s): ENG 102, 105, or 108 with C or better
ENG	391	Writing in Context	How do we understand the ways in which people use written language to carry out work in professional, academic, social and/or personal contexts? How does our understanding of the ways writing is produced for an audience shift between and among these different contexts? More importantly, how do writers adapt their writing practices in order to facilitate audience understanding as well as cultivate an audience's capacity for action? Familiarize students with rhetorical practices that position them to read, assess and respond to the rhetorical demands of a wide range of writing contexts. Strengthens students' existing rhetorical skill sets and problem-setting capacities for producing and circulating work (widely defined across material, print and digital media) that responds to a range of problems in an applied manner. Assesses the rhetorical demands of writing contexts and in developing and producing tailored, audience-specific texts that forward work in complex, interdisciplinary environments.	N	LEC	N	GNA	Liberal Arts and Sciences	Department of English	3		Prerequisite(s): ENG 102, 105, or 108 with C or better
ENG	392	History of Rhetorical Theory	Begins in ancient Greece with the rise of the art of public oratory (known as rhetoric) and ends in the present, an era dominated by mass media. Engages in a great deal of reading--lots of very old writings as well as some newer ones. Covers a great many topics and ideas; focuses by continually returning to the subject of public discourse. Challenging readings designed to emphasize the connection between systems of philosophy (or "worldview") and systems of communication. By focusing on big ideas, students become a better thinker and communicator in any chosen career.	N	LEC	N	GNA	Liberal Arts and Sciences	Department of English	3		Prerequisite(s): ENG 102, 105, or 108 with C or better
ENG	393	Theories of Literacy	While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes.
