Central Arizona Groundwater Replenishment District Membership in the Tucson Active Management Area 2005-2009

BACKGROUND

In 1980, the Arizona Legislature passed the Groundwater Management Act to protect the state's groundwater supply from over pumping. The Act included Assured Water Supply (AWS) rules, which were administered by the Arizona Department of Water Resources (ADWR). AWS rules require that providers, land owners and developers within Active Management Areas (AMAs) demonstrate that a 100-year supply of water is available for water service areas and new housing subdivisions. The Tucson AMA (TAMA) covers nearly 4,000 square miles in parts of Pima, Pinal and Santa Cruz counties. Over 300,000 acre-feet of water is used in the TAMA annually. The TAMA goal is to reach safe yield by 2025.

Initially, water supplies from aquifers could be used to satisfy the AWS rules, as long as the groundwater levels were not projected to drop more than 1,000 feet below the land surface within 100 years. Over time, it became apparent that renewable water supplies would be needed to support new growth and reduce aquifer depletion. In addition, safe yield would be difficult to reach if developers and water providers did not have access to additional renewable supplies. To address these concerns, the state Legislature, in 1993, gave groundwater replenishment authority to the Central Arizona Water Conservation District (CAWCD), which also oversees the Central Arizona Project (CAP). This led to the creation of the Central Arizona Groundwater Replenishment District (GRD). The GRD serves Maricopa, Pinal and Pima counties, which include three AMAs – Phoenix, Pinal and Tucson.

Under revised AWS rules, which took effect in 1995, land owners and water companies could demonstrate AWS compliance by joining the GRD. Membership allows land owners and water companies to contract with the GRD to replenish groundwater pumped in exceedance of their pumping allowance. However, if a Member Land (ML) or Member Service Area (MSA) does not exceed their pumping allowance, they may not actually need to have the GRD to recharge for them. As a result, the GRD's replenishment obligation for that entity may vary from year to year. The 2009 obligated volumes are reported in the findings section of this report. The GRD purchases "excess" CAP water to fulfill replenishment obligations and conducts replenishment within three years at the CAWCD recharge facility nearest to a member's location. CAWCD recharges at three sites in the TAMA – Avra Valley, Pima Mine Road and Lower Santa Cruz. Combined, the three facilities have a cumulative permitted recharge capacity of 91,000 acre-feet per year.

The GRD serves two types of members – Member Lands (ML), which are subdivisions, and Member Service Areas (MSA), which are water providers such as Tucson Water, and private water companies, such as Metropolitan Domestic Water Improvement District. Homeowners in ML subdivisions pay the GRD recharge costs through their property taxes, while

homeowners served by MSAs pay recharge costs as part of their monthly water bills. The amount a homeowner pays will vary depending on the amount of groundwater used. Replenishment costs will increase in the future, as the availability of excess CAP water declines and as additional renewable water supplies are needed.

PURPOSE

The purpose of this project is to provide regional managers and the public with updated comprehensive maps and accompanying datasets for GRD members within the TAMA in the context of its impact patterns on AWS. These datasets are available in raw format from PAG and also will be provided on the Pima County Map Guide Web site for interactive viewing. In the past, CAP also has used this report to address boundary reconciliation issues.

METHODOLOGY

Pima Association of Governments (PAG) first reported on GRD membership in Pima County through a 2006 memo and report to Pima County. Since that time, PAG has updated the report several times. In 2007, the geographic area was expanded from Pima County to the entire TAMA. This current 2011 report provides status updates including an analysis of changes in membership between 2005 and 2009. The report now includes all of the TAMA's non-member service providers and subdivisions within Pinal County, in addition to our regular Pima County data. As shown in the 2009 GRD membership map (Figure 1), water service boundaries have been updated to represent parcels served, to correspond with ADWR's representation of members. Previously, water service providers were delineated based on buffered water lines.

The datasets used for this project were provided by Pima County, Central Arizona Association of Governments (CAAG), GRD and CAP. All of these datasets are current to December 2009. These data were the most up-to-date available as of March 2011. Use/obligation data are due from members at the end of March in the year after aquifer withdrawals take place. CAP usually has updates processed and available by the end of the year following that March. PAG merged these data into new, more comprehensive shapefiles and narrowed the extent to include only the TAMA. Due to variation within the data sources, some polygons within the shapefiles do not include all attribute data. ML subdivision and MSA data sources and the provided attributes are listed in Table 1, which states how current each dataset is. Table 2 lists attributes of the GRD ML shapefiles and associated database tables assembled by PAG.

The following sections describe how shapefiles were developed for Member Lands, Member Service Areas, and Non-Member Water Companies. In each case, PAG merged and filtered data sets from various sources and then clipped the files to the TAMA boundary.

Table 2. Attributes of the GRD Member Lands 2009 dataset

Attribute Name	Meaning
2009_OBLIG	2009 Replenishment Obligation in acre-feet per year - Sum of Obligation - Amount over groundwater allowance set by AWS rules
ACRES	Total acres in subdivision Member Land
AMA_	Active Management Area
CAGRD_NO	Central Arizona Groundwater Replenishment District Member Land Number
CAGRD_LAST	Last 4 digits of GRD number
CERTIFICAT	Certificate number of Assured Water Supply
COUNTY	County name
DIVISION_N	Division Name
MEMBER_DAT	Date Member joined GRD
ML_NAME	Member Land Name (i.e. GRD Subdivisions in the TAMA)
ML_NO	Member Land Number
NOTES	Parcel boundary information
ORIGINAL_G	Original groundwater allowance (i.e. allocation) in acre-feet per year
PREV_LAND	Previous land use
REPORT_YEA	GRD Reporting Year for Obligation
Shape_Area	Area of feature - automatically generated
Shape_Leng	Length of feature - automatically generated
SOURCE	BND Source – GIS figure
TOTAL_LOTS	Total number of parcel lots - Lot Count
WATER_PROV	Water Provider Name

Methodology for Member Lands:

CAP provided PAG with a shapefile containing the location of every GRD ML subdivision, along with a spreadsheet containing attribute data for all ML subdivisions in Pima and Pinal counties. The shapefile and spreadsheet were then merged by matching the ML number, and MLs outside of the TAMA were excluded. Appendix 1 includes all the MLs in a shortened version of the GRD ML data table for viewing in this report. The full data set includes 22 attribute fields contained within the shapefile 'GRD_ML_Subdivisions_TAMA.'

PAG created various graphics to show ML membership growth patterns in the TAMA. The symbology of the ML subdivision shapefile was based on the year each ML joined the GRD, with each color on the map, ranging from yellow (1995) to blue (2009), representing a different year. This growth pattern is displayed geographically on Figure 2 and is also shown in a graph in Figure 3.

In addition, PAG created a simplified map and dataset to show which subdivisions became MLs between 2005 and 2009 and which subdivisions had been removed from GRD membership during that time period. These are displayed in Figure 4 and are listed in Tables 3 and 4.

PAG visually determined which subdivisions extend beyond areas covered by the GRD through MSAs or ML subdivisions. These subdivisions are listed in Table 5.

Methodology for Non-Member Subdivisions:

Pima County provided a shapefile of all subdivisions in Pima County and CAAG provided a shapefile of all subdivisions in Pinal County, which PAG merged together. PAG created a non-GRD member subdivision shapefile by excluding GRD Member Lands and subdivisions served by GRD Member Service Areas. To make the file relevant to AWS requirements, the file was clipped to exclude subdivisions outside of the TAMA. Due to variation in naming conventions between county and CAP sources, non-GRD member subdivisions were determined based on a lack of spatial overlap with GRD member locations. Non-member subdivisions are listed in Appendix 2.

A separate shapefile was created to display non-GRD member subdivisions which were built between 1995 and 2009. These subdivisions are listed in Appendix 3.

Methodology for Member Service Areas:

CAP provided a shapefile of all water providers within the TAMA, including information on GRD membership status. A spreadsheet listing the name, membership date and the 2009 groundwater obligation for GRD MSAs also was included. PAG excluded non-member water companies to create a shapefile of MSAs located within the TAMA. The MSA shapefile was merged with data from the spreadsheet by matching Member Area name. MSAs are listed in Table 6.

Methodology for Non-Member Water Companies:

CAP provided a shapefile of all water providers within the TAMA. PAG excluded MSAs to create a shapefile of non-member water companies located within the TAMA. Non-member water companies are listed in Table 7.

FINDINGS

Key findings of this investigation include:

- Many ML subdivisions are clustered, with a large cluster located in the Sahuarita area
- In the TAMA, only 7.2 percent of subdivisions are not covered under the GRD
- MSAs within the TAMA serve nearly 5,500 subdivisions

As of December 2009, a great majority of subdivisions in the TAMA were connected to the GRD either as a ML or through a MSA. In 2009, the total replenishment obligation of all members, both ML and MSA, was 5,172 AF, or 5.7 percent of the total 91,000 AF capacity of the three CAWCD facilities at which the GRD performs recharge activities. The locations of these facilities are displayed in Figure 5.

This investigation shows that the GRD enrollment rate has decreased in recent years. A total of 89 percent of all subdivisions in the TAMA are served by the GRD through MSAs, which cover the bulk of the Tucson urban area and extends to the Pinal County line. ML subdivisions are distributed in clusters throughout the region and have a wide range of groundwater allowances and replenishment obligations. There may be some newer subdivisions which are only partially covered under MSA boundaries (Table 5).

The following sections provide details about Member Lands, Non-Member Subdivisions, Member Service Areas and Non-Member Water Companies.

Member Lands:

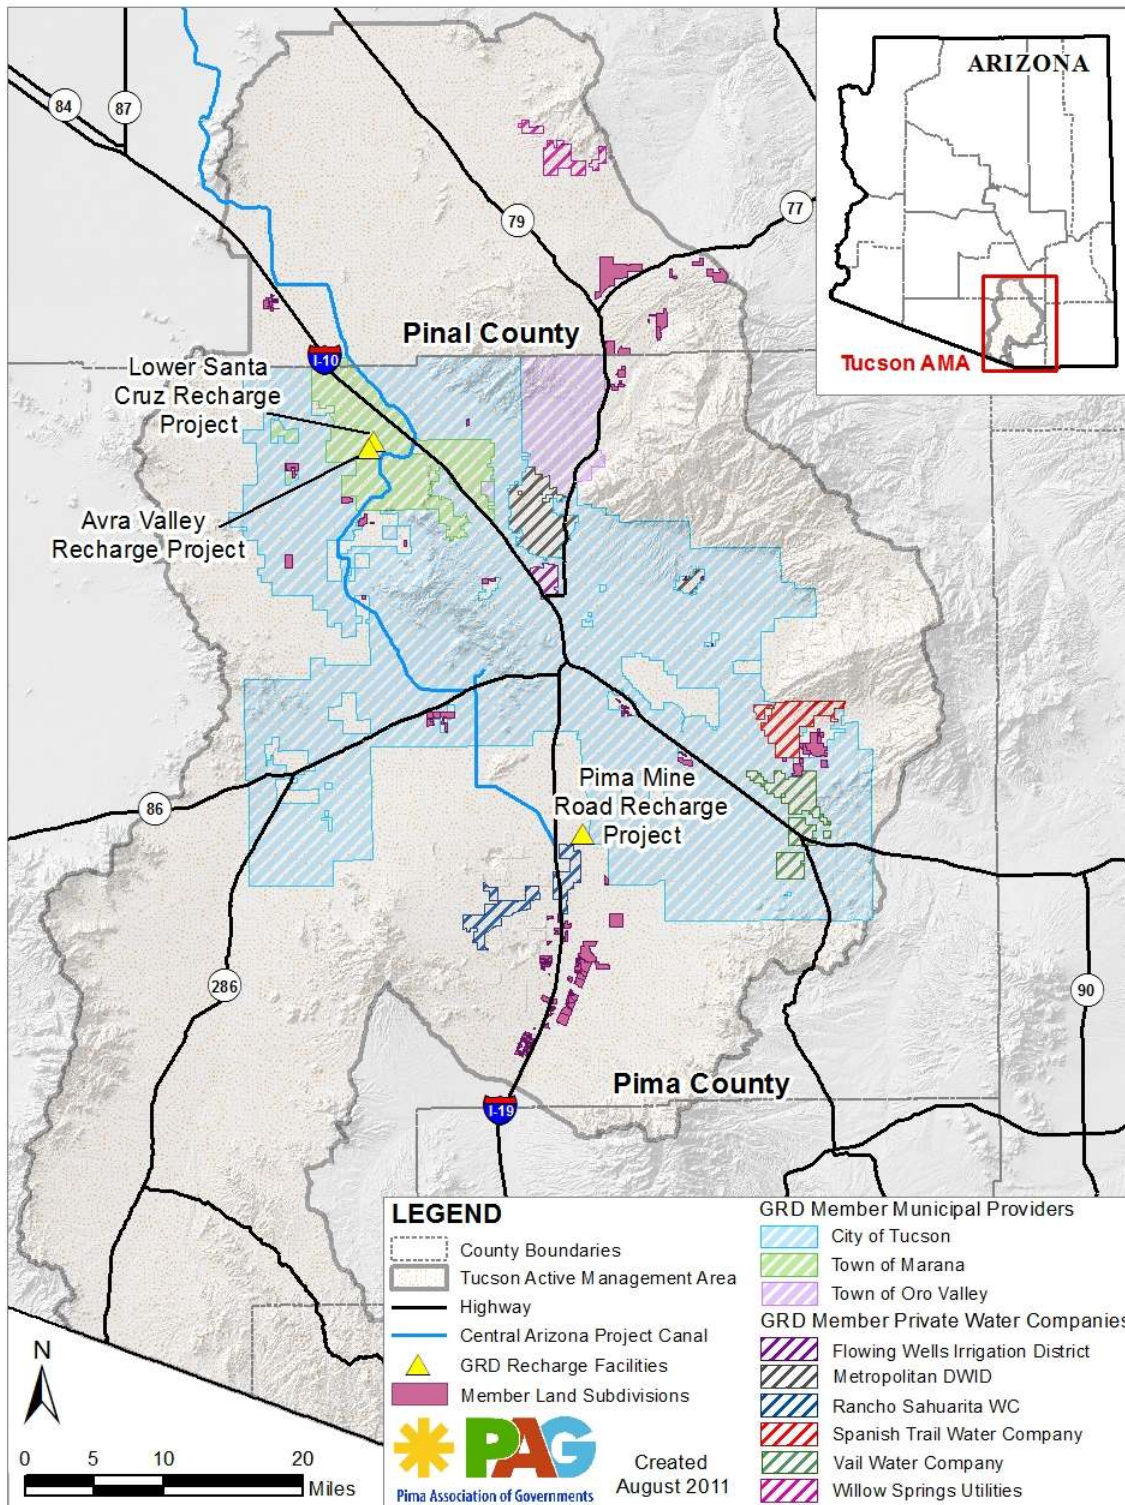

As of December 2009, there were 125 GRD ML subdivisions located within the TAMA. Of these ML subdivisions, 110 lie in Pima County, which spans most of the AMA, and 15 lie in Pinal County. There are no ML subdivisions in the Santa Cruz County portion of the TAMA. The TAMA's ML subdivisions include a total of 26,460 lots. ML subdivisions are listed in Appendix 1.

In the early 1990s, ML growth spread out into smaller clusters in the south and eastern parts of Pima County near Sahuarita, near Ryan Airfield, north of Oro Valley, and northeast of Vail (Figure 3). Overall, the majority of ML subdivisions are clustered in Sahuarita, where the earliest MLs were constructed. Most recently, ML growth has been observed in the northern parts of Pima County near Picacho Peak, in the Picture Rocks and Avra Valley areas, and in southern Sahuarita.

Between 2005 and 2009, 28 subdivisions in the TAMA attained GRD ML status, with the number of new members tapering off over the last two years. Of the new members, 22 are located in Pima County and six are located in Pinal County. On average, about eight MLs have joined the GRD per year within the TAMA. New member subdivisions are evenly distributed throughout the TAMA, with small clusters in the Sahuarita area and in a section of Pinal County near Picacho Peak (Figure 3). Subdivisions which became MLs between 2005 and 2009 are displayed in Figure 4 and are listed in Table 3.

Figure 5. Recharge project and GRD member locations in the TAMA

CAWCD Recharge and GRD Member Locations, as of 2009

Between 2005 and 2009, four subdivisions in the TAMA were removed from GRD ML membership. The three Pima County ML subdivisions became covered under the Flowing Wells Irrigation District MSA when the water company became an MSA in 2008. The fourth subdivision, which lost ML status, was located in Pinal County, but the reason for removal is not known. These subdivisions are shown in Figure 4 and are listed in Table 4.

In 2009, the total groundwater allowance for GRD MLs in the TAMA was 110,743 AF. GRD members have a wide range of groundwater allowances and replenishment obligations. Of the 125 MLs in the TAMA, 27 had GRD replenishment obligations of 0 acre-feet in 2009. This means that nearly 22 percent of MLs in the TAMA did not exceed their annual groundwater allowance. If groundwater use by these MLs exceeds their allowances in the future, the GRD will begin recharging an amount equivalent to the excess pumped. Groundwater allowances for MLs within the TAMA range from 30 to 23,934 acre-feet per year. In 2009, replenishment obligations totaled 1,863 AF for MLs. As a point of interest, approximately 14 percent of the TAMA's MLs were built on land previously used for agriculture. ML groundwater allowances and 2009 replenishment obligations are listed in Appendix 1.

In 2009, ten subdivisions in the TAMA were partially covered by the GRD under existing MSA or ML boundaries. These subdivisions are listed in Table 5.

Non-Member Subdivisions:

As of December 2009, there were 437 subdivisions, or 7.2 percent of subdivisions in the TAMA, which were not GRD members and were not covered by MSAs. Of these, 84 were built after 1995, when the GRD was established. A majority of the non-GRD subdivisions built during this time period were built in the Sahuarita/Green Valley area. These subdivisions were not located near any existing MSAs as of 2009. Determining why these subdivisions are not covered by the GRD was beyond the scope of this investigation. Non-member subdivisions are listed in Appendix 2 and non-members constructed after 1995 are listed in Appendix 3.

Member Service Areas:

As of December 2009, there were nine MSAs in the TAMA. Most MSAs within the TAMA fall in Pima County, with only Willow Springs Utilities and a portion of Town of Marana Water serving in Pinal County. Willow Springs Utilities and Flowing Wells Irrigation District are the most recent additions to the GRD, joining in 2006 and 2008, respectively. All other MSAs joined between 1995 and 1999. Three of the MSAs are municipal water providers, while six are private water companies. In total, MSAs within the TAMA serve 5,415 subdivisions. MSAs are listed in Table 6.

In 2009, four MSAs in the TAMA, Rancho Sahuarita Water, Spanish Trail Water, Marana Water and Oro Valley Water, had a total GRD replenishment obligation of 3,410 acre-feet. The remaining five MSAs, Flowing Wells, Metro Water, Tucson Water, Vail Water and Willow Springs Utilities, had GRD replenishment obligations of 0 acre-feet. Tucson Water, as well as some other service providers, also has long-term subcontracts with CAP to provide substantial CAP allocations outside of the GRD system. Tucson Water recharges CAP water at the City of Tucson's Central Avra Valley Storage and Recovery Project (CAVSARP) facility in order to stay within its annual groundwater pumping allowance. It may purchase additional

water replenishment as an MSA under the GRD program. MSA replenishment obligations are listed in Table 6.

Non-Member Water Companies:

As of December 2009, there were 47 non-member water companies in the TAMA. While these companies are not GRD members, 16 of these companies serve ML subdivisions which are covered under the GRD. Non-member water providers are listed in Table 7.

CONCLUSIONS

The Tucson Active Management Area currently includes a total of 125 Member Lands in addition to nine Member Service Areas. All of these areas are, at least in part, dependent upon the Groundwater Replenishment District in order to meet their Assured Water Supply (AWS) requirements. Many of the member lands are located in areas that are near some of the 437 non-member subdivisions, which also draw on groundwater within the AMA. The use of the GRD by so many Member Lands and Member Service Areas was not predicted when the GRD was originated. The initial expectation was that use of the program would be fairly limited.

Several concerns arise when considering the widespread dependence on the GRD to meet AWS requirements in the TAMA. According to the GRD principles, the water used by the subdivision in excess of that allowed under AWS rules must be recharged by the GRD at the nearest CAWCD recharge facility within three years. Although the water is technically being recharged in the AMA, there are concerns that the recharge will not benefit areas where groundwater is actually pumped. Because recharge facilities are generally located at some distance, and often are down gradient from the subdivisions, the wet water being recharged does not benefit the aquifers beneath the subdivisions. This is acceptable under the rules, as long as drawdown does not exceed 1,000 feet below land surface at the development site. However, continual pumping at subdivision sites may result aquifer depletion, potentially causing subsidence in the area of withdrawal. Subsidence can cause major damage to property and infrastructure throughout the region.

Currently, the GRD depends on buying excess water to meet its obligations. Over time, as water utilities use more of their allocation, there will be less excess water available for purchase by the GRD. In addition, if drought limits Colorado River supplies, excess water will be one of the first uses to be eliminated by CAP when drought reductions take place. These situations raise concerns about whether the GRD will be able to purchase enough water to meet its replenishment obligations over the long term.

As noted in this report, some subdivisions built after 1994 are not GRD members, either as MLs or as customers of MSAs. It was beyond the scope of this investigation to contact or otherwise research how these subdivisions were able to meet the AWS rules without joining the GRD. It is possible that these subdivisions are as yet undeveloped or they must have access to another renewable water resource unconnected to CAWCD recharge projects.

PAG recommends continued tracking of GRD-dependent subdivisions in the TAMA. Continued involvement in processes such as ADWRs Groundwater Users Advisory Committee and other regional water forums will help our area stay informed about continued GRD expansion and how successfully the GRD is meeting its replenishment goals. In addition, it would be useful to investigate and set up ongoing tracking systems to monitor new subdivisions that meet AWS requirements outside of the GRD system.

Appendix 1

GRD Member Lands in the TAMA, 1995-2009

Central Arizona Groundwater Replenishment District Membership
in the Tucson Active Management Area
2005-2009

Appendix 1. GRD Member Lands in the TAMA, 1995-2009
