#### **PURPOSE AND NEED**

Pima County has undertaken an alignment study to plan for the realignment of Alvernon Way and Swan Road south of Valencia Road in Tucson, Arizona. The primary need for these realignments is due to the planned airport expansion at Tucson International Airport (TIA). As part of the TIA expansion, the airport is planning to construct a third parallel runway located east of the existing runways. The 11,000-foot long runway would run diagonally (NW to SE) and extend through the existing Alvernon Way roadway and terminate near the vicinity of existing Swan Road. Due to the required runway protection zones at each end of the runway, any realignment of Swan Road would need to be east of the existing roadway. Associated with this realignment, Hughes Access Road would also need to remain connected to Alvernon Way or Swan Road to provide continued access to Raytheon Missile Systems. The project area is shown in **Exhibit 1-1**.

In addition to the planned airport runway, the realignment of Alvernon Way has been identified in the Pima County Major Streets and Routes Plan (MSSRP). The need for an improved north/south corridor has been identified in the Pima Association of Governments (PAG) Southeast Area Arterial Study, and the PAG State Transportation System Mobility and Regional Circulation Needs Feasibility Study (Loop Study). Both PAG reports forecast a marked increase in development within the southern PAG metropolitan area which results in the need for additional arterial capacity. Due to the location of the Tucson International Airport and Davis Monthan Air Force Base, north-south arterials between Nogales Highway and Kolb Road are limited to Alvernon Way, Swan Road, and Wilmot Road.

The purpose of this report is to compare various alignment alternatives for the realignment on the basis of access, cost, right-of-way, and floodplain impacts.

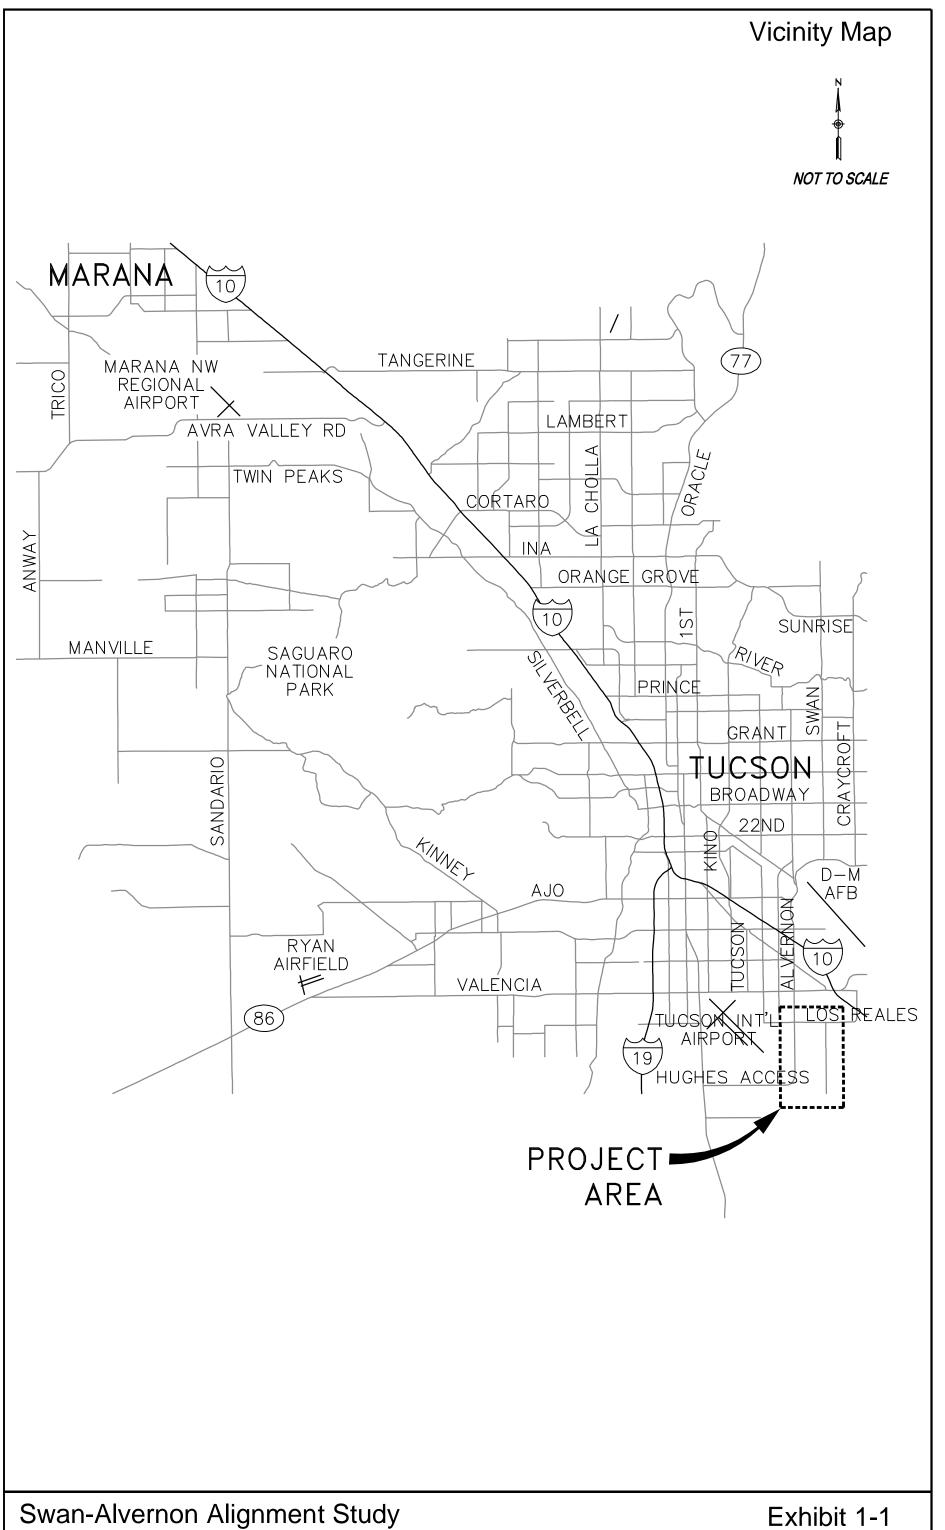

#### DESCRIPTION OF THE STUDY AREA

The area in which the alignment alternatives were developed is roughly bounded by Craycroft Road to the east, Alvernon Way to the west, Los Reales Road to the north, and Old Vail Connection Road to the south. Much of the study area is current vacant though there are several large land uses that create sizable obstacles to roadway alignments. These include the City of Tucson Los Reales Landfill, the United Sports Arizona Race Park, and the Granite Construction Swan Road Plant which mines and processes sand, gravel, asphalt. In addition to the Granite Construction facilities which are located on the east side of Swan Road, there are several other operations located between Alvernon Way and Swan Road that obtain access from both roadways. Access via Alvernon Way is currently on property owned by Tucson Airport Authority. These operations are currently signed as Sierra Mining and Crushing Company and CalMat of Arizona.

In addition, Raytheon Missile Systems, employing 10,000 persons at its Airport site, uses Alvernon Way and Hughes Access Road to provide access to its main entrances on the Raytheon South Access Road. This gated entry, open 24 hours a day, is the main truck route for the site, and serves 6600 cars per day.

The Tucson International Airport is a major land owner in the study area.

#### **BACKGROUND INFORMATION**

Pima County in the 1980s or earlier determined that Alvernon Way and Swan Road could be impacted by expansion of the Tucson airport to the east. Staff proposed, and the Board of Supervisors approved, an amendment to the Major Street and Scenic Routes Plan showing Alvernon Way realigned to Swan Road south of Los Reales Road. A detailed alignment was not determined at that time, but a 150-foot right-of-way was established for the new alignment (see **Exhibit 1-2** below).

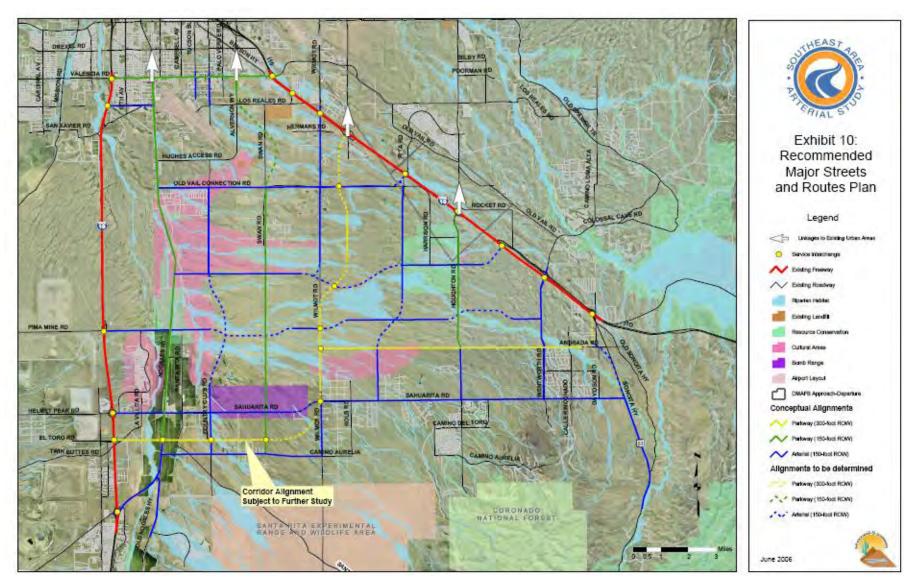

**EXHIBIT 1-2 ALVERNON WAY REALIGNMENT** 

In 2002, recognizing that roadway infrastructure in the southeast area of Tucson would not accommodate future anticipated population growth and development, Pima Association of Governments initiated the Southeast Area Arterial Study to analyze future roadway needs in the southeast area of Tucson. The study area was roughly bounded by I-19 to the west, Valencia Road to the north, State Route 83 to the east and the Santa Rita Mountains and Coronado National Forest to the south. The study developed a new traffic circulation and access framework for future planning and updated the PAG travel demand model. The study recommended a major streets and routes plan for the southeast area including a realignment of Swan Road that extended to Sahuarita Road (see **Exhibit 1-3**).

#### EXHIBIT 1-3 SOUTHEAST AREA ARTERIAL STUDY RECOMMENDED MAJOR STREETS AND ROUTES PLAN

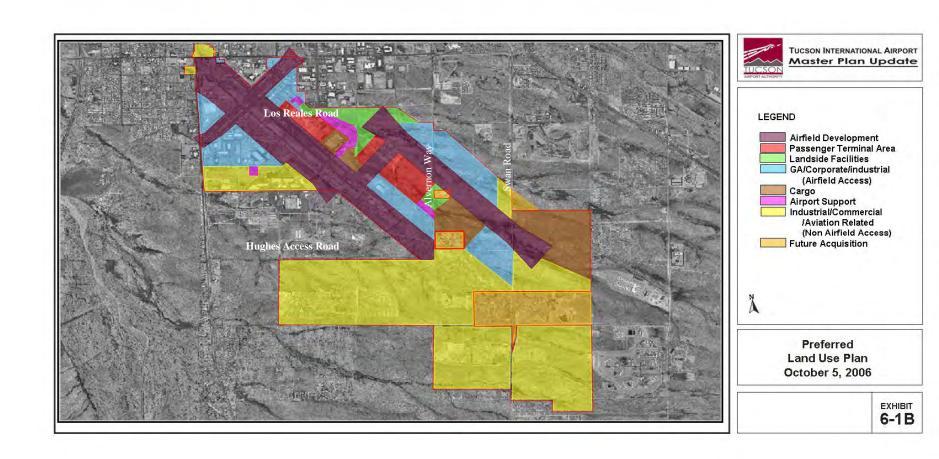

Beginning in 2004, developers under the name South Wilmot Land Investors, LLC began to acquire large parcels of land at the end of Swan Road south of the Old Vail Connection Road and began master planning for the Swan Southlands project. Swan Road is a key roadway to provide future access to this project. A development agreement with Pima County stipulates that the developer will widen and improve portions of Swan Road to accommodate the anticipated traffic that would be generated by the Swan Southlands development.

In 2005, the Tucson International Airport updated its Master Plan which identified short and long-term development projects necessary to accommodate projected aviation needs over the next 20 years. The Master Plan Update recommended that a third parallel runway be constructed to accommodate future demand, but did not stipulate when this would occur. The plan shows the new runway located east and north of the existing runway, cutting across both Alvernon Way and Swan Road and ostensibly closing both roadways (see **Exhibit 1-4**). The plan also shows portions of Swan Road to be acquired by the airport authority and future ground cargo operations located adjacent to and east of the present Swan Road alignment. Potential impacts to Alvernon Way and Swan Road were not addressed in the plan, but Pima County Department of Transportation staff is discussing realignment plans with TIA staff as a part of this study.

#### EXHIBIT 1-4 AIRPORT LAND USE PLAN

#### 2. EXISTING CONDITIONS – OPPORTUNITIES AND CONSTRAINTS

#### 2.1 ROADWAY AND TRAFFIC CONDITIONS

#### 2.1.1 Roadway Facilities

Most of the public roadways within the study area are the responsibility of Pima County Department of Transportation and a few are within the jurisdictional boundaries of the City of Tucson. There are several unimproved rural roads that are not maintained by any jurisdiction and typically do not meet local design, construction, and maintenance standards.

Pima County maintains a Major Streets and Scenic Routes Plan (MSSRP) that defines major streets and scenic routes and public right-of-way widths. The MSSRP is used to establish rights-of-way for arterials and collector roads and to determine setbacks for land development located adjacent to these roads. Portions of Alvernon Way, Swan Road, Los Reales Road, Hughes Access Road and Old Vail Connection Road are designated major routes on the Pima County Major Streets and Scenic Routes Plan. Portions of those roadways located within the City of Tucson are designated as arterials on the City Major Streets and Routes Map.

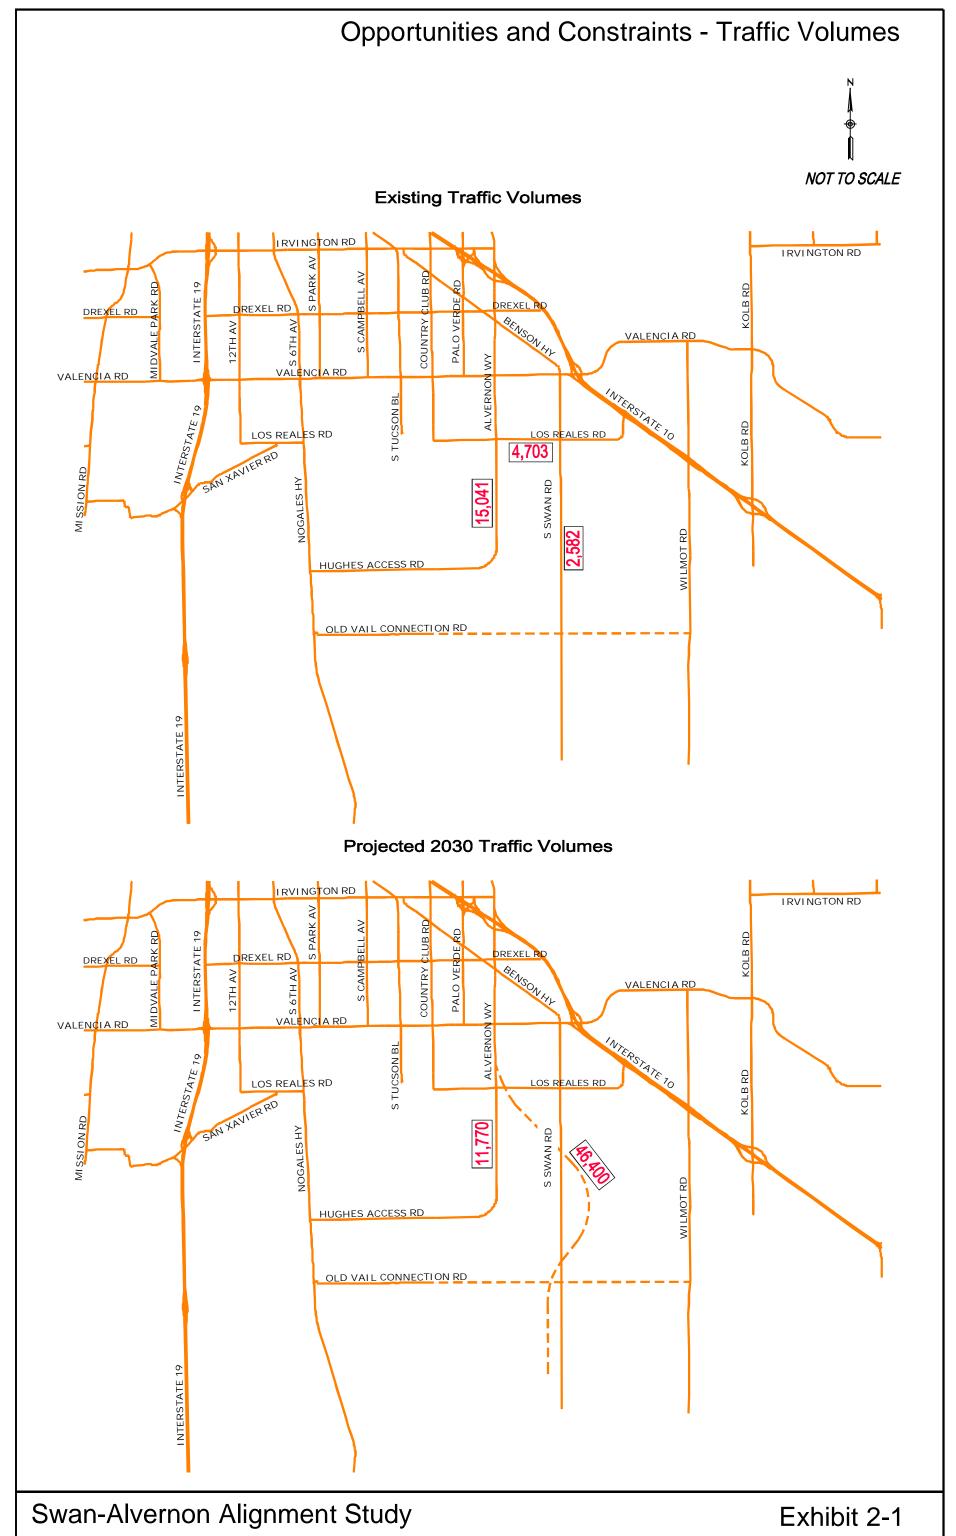

#### 2.1.2 Regional Connectivity

**Exhibit 2-1** shows the existing arterial road network of the study area and includes a summary of existing daily traffic volumes in the study area. Swan Road is the only north-south roadway that provides access south of the study area, and Alvernon Way is the only north-south roadway that provides access north to the interstate system in central Tucson. Alvernon Way carries a higher volume of traffic than Swan Road and is used by traffic destined for Raytheon Missile Systems. Swan Road carries relatively low traffic volumes and provides access to the Los Reales Landfill, Granite Construction Swan Road Plant, several industrial businesses, and approximately fifty residential lots located south of Old Vail Connection Road. Los Reales Road, Hughes Access Road and Old Vail Connection Road all provide limited east-west access through and beyond the study area.

Alvernon Way connects to Interstate 10 via a dedicated traffic interchange located approximately 2.5 miles north of Los Reales Road. The I-10/Alvernon Way interchange is a partial diamond interchange which accommodates all movements except for the westbound on-ramp. It is spaced approximately 0.6 miles east of the Palo Verde/I-10 interchange and approximately 2 miles west of the I-10/Valencia Road interchange. Valencia Road connects Alvernon Way to Interstate 19 via an interchange located approximately 4.5 miles west of Alvernon Way. Alvernon Way also continues north into central Tucson and provides direct connections to Golf Links Road and Aviation Parkway.

Alvernon Way provides access to one of the main entrances to Raytheon Missile Systems on Hughes Access Road. This access is important for providing safe transport of sensitive munitions, material deliveries from I-10, connections to other Raytheon campuses such as the University of Arizona Science and Technology Park, and employees who live east of the main Raytheon campus.

Alvernon Way provides access to the Hughes Sand and Gravel mining operations located south and east of the 90 degree bend in Alvernon Way/Hughes Access Road. Alvernon Way also provides access, via Country Club Road, to approximately 800 residential homes located in the unsubdivided area south of Old Vail Connection Road and west of Country Club Road.

**Swan Road** connects indirectly to I-10 via Los Reales Road and Craycroft Road which has an interchange with I-10. The existing I-10 traffic interchange with Craycroft Road is a tight diamond interchange with one-way eastbound and westbound frontage roads extending between the interchanges. Swan Road extends north of Los Reales Road as a neighborhood collector to connect to Valencia Road and Benson Highway. Swan provides the only north-south access between Old Nogales Highway and Wilmot Road (see **Exhibit 2-2**).

#### 2.1.3 Physical Features

The following section describes the roadways within the study area, their cross-sections and speed limits. Traffic counts were obtained from the Pima County Department of Transportation Traffic Engineering website.

Alvernon Way, north of Hughes Access Road looking north

**Alvernon Way** south of Los Reales Road is a County-maintained, paved 2-lane arterial road with one travel lane in each direction and no curbs, gutters or sidewalks. The posted speed limit is 55 mph. Alvernon Way is classified as an Urban Minor Arterial (Federal Highway Code) from Los Reales Road to Hughes Access Road and right-of-way width is 200 feet. Traffic volumes (Pima County, October 2006) approximately 15,000 vehicles per day.

**Hughes Access Road** east of Old Nogales Highway is a paved 2-lane

arterial road with one lane in each direction and no curbs, gutters or sidewalks. The posted speed limit is 55 mph. Hughes Access Road is classified as an Urban Minor Arterial (Federal Highway Code) from Nogales Highway to Alvernon Way and the right-of-way width is 200 feet. Traffic volumes (Pima County, October 2006) are approximately 15,000 vehicles per day. Right and left turn lanes occur at the south entrance to the Raytheon campus. The 1-mile section from Raytheon South Access Road to County Club Road is under City of Tucson jurisdiction but maintained by Pima County under an intergovernmental agreement with the City.

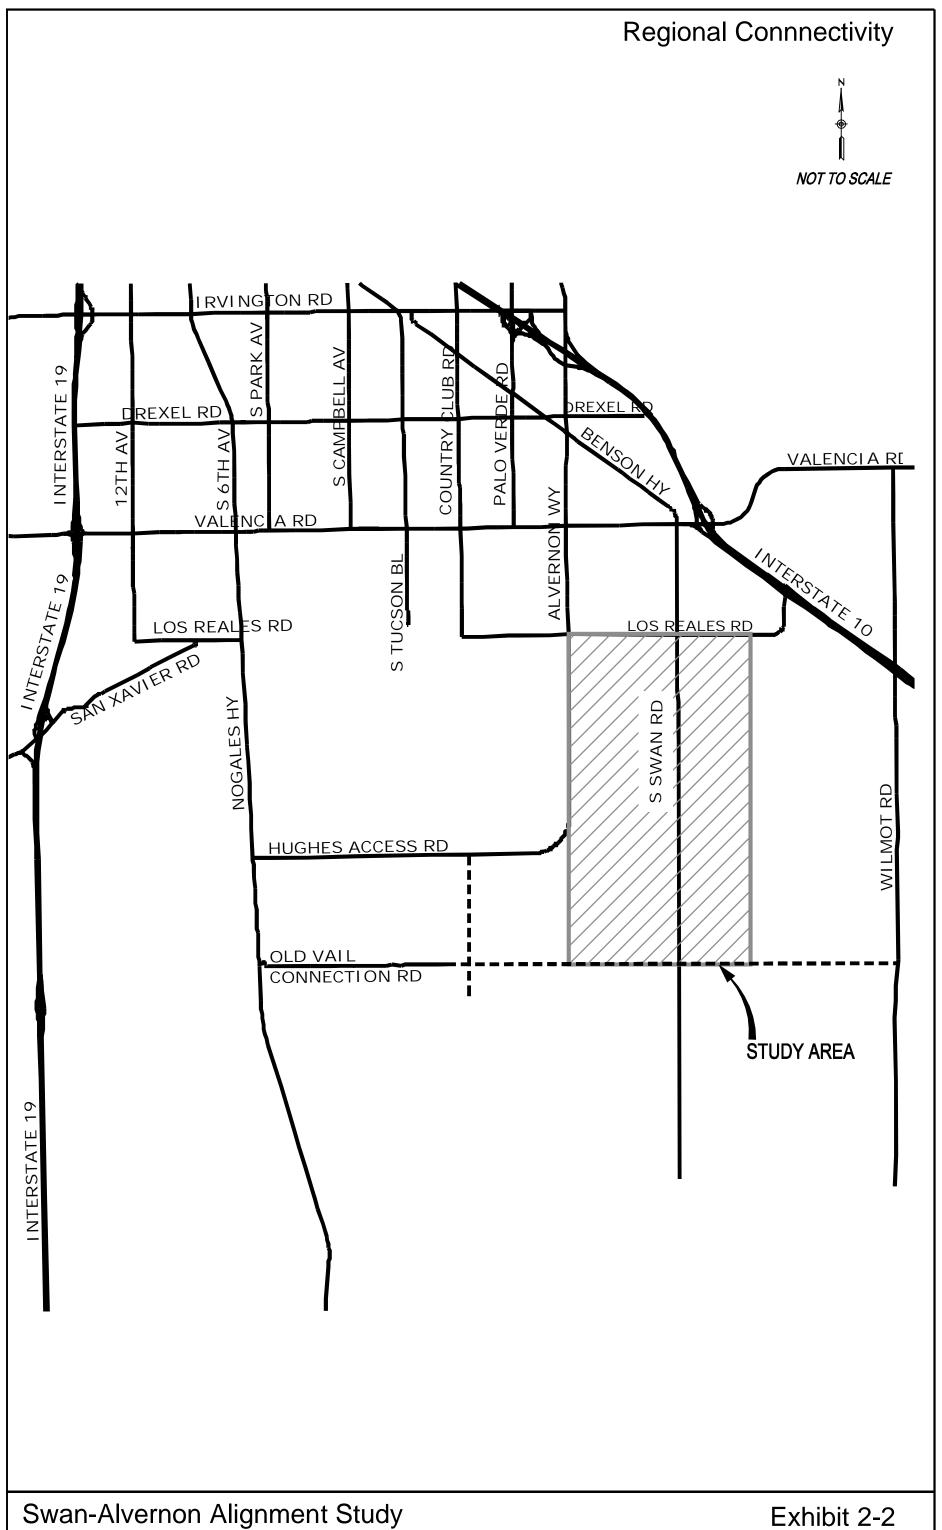

Swan Road, south of Los Reales Road, looking south

Swan Road south of Los Reales Road is a paved 2lane arterial road with one lane in each direction and no curbs, gutters or sidewalks. The posted speed limit is 55 mph between Los Reales Road and Old Vail Road, and 50 miles per hour south of Old Vail Connection Road. The road ends in a cul-de-sac approximately 2 miles south of Old Vail Connection Road. Swan Road is classified as an Urban Collector from Los Reales to Old Vail Connection Road and right-of-way width is

100 feet. Traffic volumes (Pima County, October 2006) are approximately 2,600 vehicles per day south of Los Reales Road. A short section of Swan Road south of the Los Reales landfill falls under City jurisdiction, but is maintained by Pima County under an intergovernmental agreement with the City. Swan Road provides access to approximately 50 rural residential lots located south of Old Vail Connection Road.

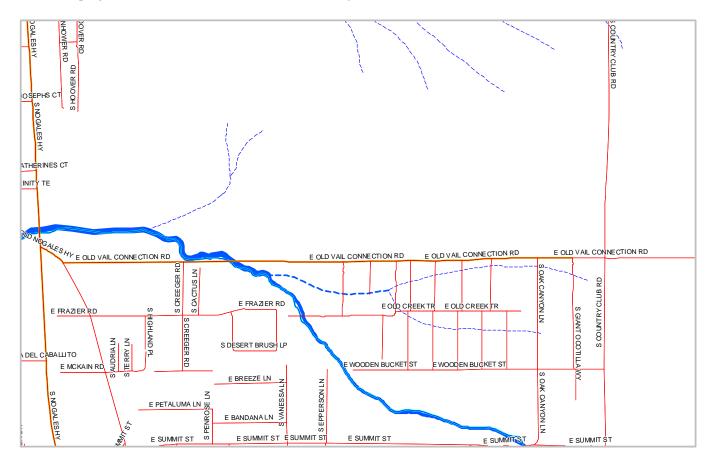

Los Reales Road between Alvernon Way and Swan Road is a 2-lane arterial road with one lane in each direction and no curbs, gutters nor sidewalks. The posted speed limit is 50 mph. Los Reales Road is classified as an Urban Collector throughout the study area with a right-of-way width of 60 feet. Traffic volumes (Pima County, October 2006) are approximately 4,700 vehicles per day just east of Alvernon Way. East of Swan Road, Los Reales Road is planned to be realigned to accommodate future development of the Los Reales landfill.

Old Vail Connection Road is an unpaved private road from Creeger Road to Wilmot Road with a right-of-way that varies from 60 feet to 90 feet wide. A short section of roadway is paved and county-maintained from Old Nogales Highway to Creeger Road. East of Creeger Road, the road crosses the main channel of the Franco Wash (see map below) and is often closed during and following storms, cutting off the residential areas east of the wash and south of the road. East of Country Club Road, the unpaved road continues within a right-of-way that varies from approximately 40 feet to approximately 120 feet. No speed limit signs are posted on this road in the vicinity of the project. No traffic counts are available for this road. West of Country Club Road, the road appears to be little used, and trash dumping was noted at numerous locations on or adjacent to the road.

Map showing Street System South of Old Vail Connection and West of Country Club Road

**Raytheon South Access Road** is a paved 2-lane road with one lane in each direction and is one of the

Country Club Road, at Old Vail Connection Road, looking south

two major access points to Raytheon Defense Manufacturing Facilities. This road is guarded and restricted to public use. The entrance is under surveillance by security guards at all times. The South Access Road carries approximately 6,800 vehicles per day in both directions. This entrance operates 24 hours per day.

Country Club Road extends south from Hughes Access Road for approximately 2 miles and is maintained by the City of Tucson. The northernmost half-mile is paved and the remainder is unpaved. South of Old Vail Connection Road, the road narrows significantly, as shown in the photo at left. This road provides access to the un-

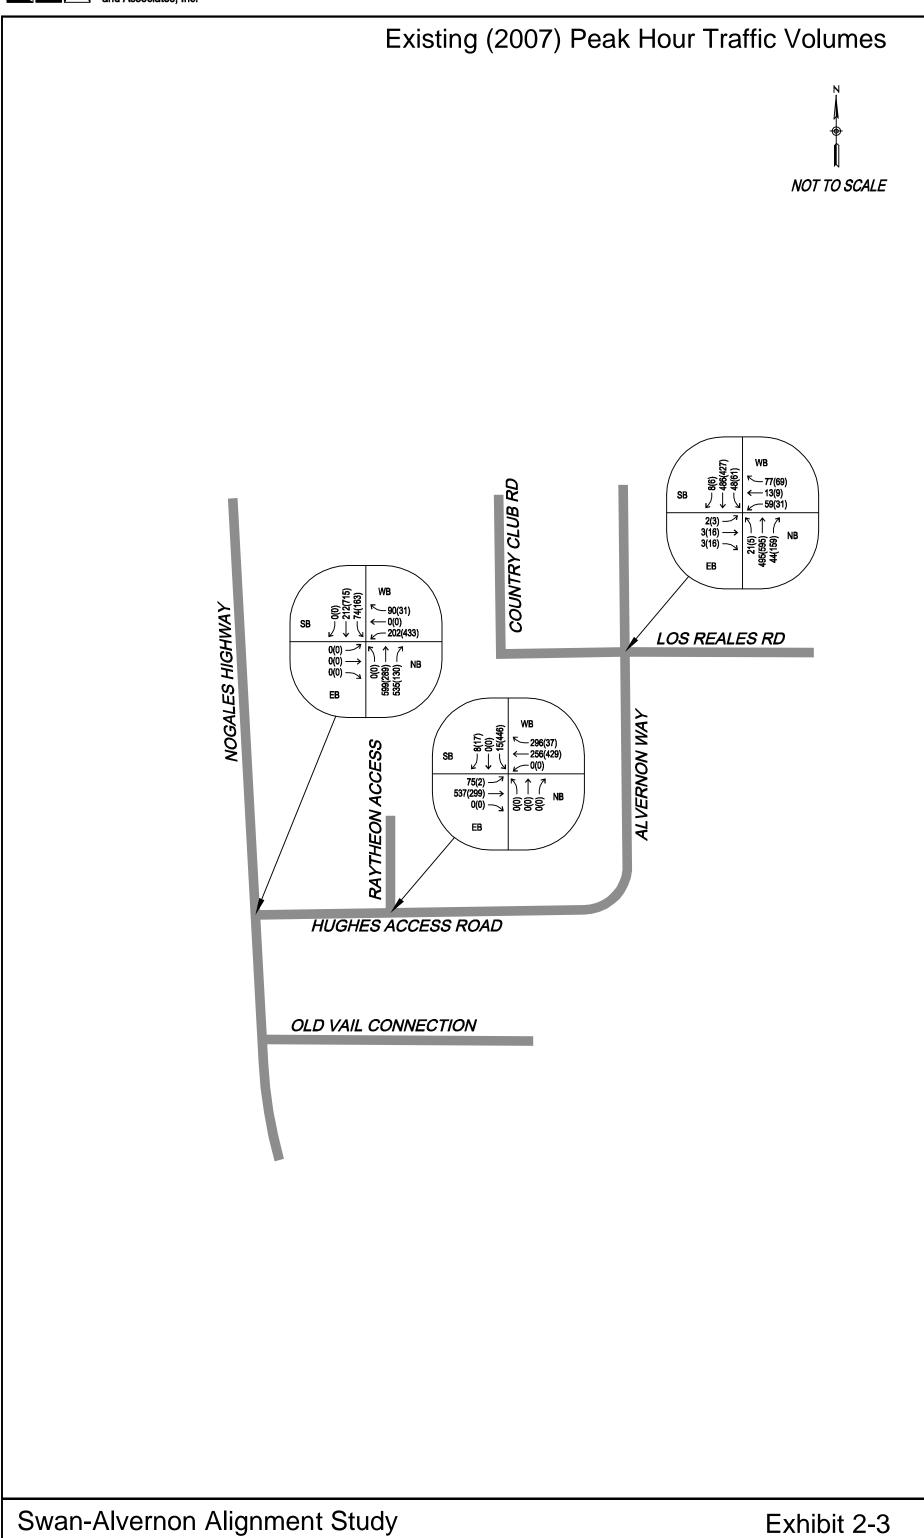

subdivided residential areas located south of Old Vail Connection Road and west of County Club Road. No traffic counts are available for this road.

#### 2.1.4 Turning Movement Counts

Turning movement counts were collected during am and pm peak periods at the intersections of Alvernon Way and Los Reales Road, Hughes Access Road and Raytheon South Access Drive, and Hughes Access Road and Nogales Highway (see **Exhibit 2-3**). These data suggest that most of Raytheon's traffic is coming from the north and east using Alvernon Way. These data also show that not all traffic using Alvernon Way and Hughes Access Road is directly associated with Raytheon.

The turning movement counts indicate that most (80%) of the traffic arriving at the Raytheon plant in the am peak hour is arriving from the east and Alvernon Way, while only 20% is entering from the west on Hughes Access Road. Similarly, most (96%) of the traffic leaving the Raytheon plant is turning east on Hughes Access Road to Alvernon Way, while only 4% is turning west to Nogales Highway.

Much of the traffic (approximately 85%) travelling south on Alvernon Way, south of Los Reales Road, is coming from Alvernon Way north of Los Reales Road rather than Los Reales Road (11%). Similarly, much of the traffic turning east onto Hughes Access Road from Nogales Highway is coming from the south (88%) rather than the north (12%).

Of the traffic driving east on Hughes Access Road from Nogales Highway during the am peak period, most of the traffic (88%) is traveling east to Alvernon Way and only 12% is turning north into Raytheon. Of the traffic driving west on Hughes Access Road from Alvernon Way during the am peak period, just more than half (54%) of the traffic is turning north into Raytheon while the remainder (47%) is travelling east to Nogales Highway.

In 2007, Pima County conducted a traffic signal warrant analysis for the intersection of Hughes Access Road and the South Entrance to Raytheon Missile Systems. Raytheon employs between 10,000 and 12,000 employees and this intersection serves as one of the main entrances to the plant. Existing traffic volumes meet the minimum requirements for a traffic signal under Warrant 2: Four-Hour Warrant. The pattern of right angle crashes at this intersection also justifies a traffic signal under Warrant 7: Crash Experience. Pima County recommended that a traffic signal be installed at this location.

#### 2.1.5 Transportation Improvement Plans and Programs

#### PAG 2030 Regional Transportation Plan (RTP)

The PAG Regional Transportation Plan (RTP) is the region's long term transportation vision and it identifies transportation needs today and twenty years or more into the future. The RTP recommends transportation solutions and financial strategies and guides investment of regional transportation resources in our region's roadway, bus, pedestrian, bicycle, aviation, freight and rail facilities over the next twenty to thirty years 1. The 2030 RTP lists two projects in the study area that are planned for the period 2020-2030. The first project is the far parallel runway for the Tucson International Airport. The second project is extension of Swan Road as a new four-lane roadway from Old Vail Connection Road to Valencia Road.

#### PAG Transportation Improvement Plan (TIP)

The PAG Transportation Improvement Plan (TIP) is a rolling five-year schedule and budget of proposed transportation improvements that seeks to optimize the use of available federal, state and local funds and resources to serve the region's multi-modal transportation needs. The TIP implements the long-range transportation (RTP). The only project listed in the 2008-2012 TIP is the widening of Valencia Road, from Alvernon Way to Kolb Road from four to six lanes with roadway design beginning in 2009.

<sup>&</sup>lt;sup>1</sup> Source: Pima County Southwest Infrastructure Plan, 2007, by Curtis Lueck & Associates

#### Pima County Development Impact Fee Program - CIP Projects

Since 1996, Pima County has collected roadway development impact fees to help finance roadway needs created by new residential development. By law, impact fees can only be used to expand the roadway system, not maintain existing roads. Impact fees must be spent on roadway projects in proximity to the area in which they are collected. Impact fees that have been collected, but not yet spent, are programmed for specific roadway projects within each of the ten benefit areas. The Alvernon-Swan realignment is in the San Xavier benefit area. Current projects are:

#### San Xavier Benefit Area

Swan Road: Valencia Rd to Los Reales Rd (Complete)

Swan Road: South of Old Vail Connection Rd

Old Vail Connection Road: Nogales Hwy to Country Club Rd

#### **Public-Private Transportation Improvements**

[Development agreement with Diamond Ventures for Swan Road improvements]

#### 2.1.6 Future Traffic Volumes

The PAG travel forecasting model projects future regional traffic volumes based on future population and employment growth assumptions. The 2030 model assumes that Alvernon Way connects to Swan Road as a four-lane roadway and predicts that this new roadway would carry approximately 46,000 vehicles per day in 2030 based on development assumptions. The model also assumes that Alvernon Way remains south of Valencia Road connecting to Hughes Access Road and continues to carry approximately 12,000 vehicles per day. If this section of Alvernon Way was closed due to airport expansion, the forecast traffic volumes would need to be reassigned to the new Alvernon/Swan roadway alignment. The PAG 2030 traffic volume forecast is shown on **Exhibit 2-1**.

#### 2.2 LAND OWNERSHIP

Land ownership on the corridor is summarized in **Exhibit 2-4**. The exhibit shows parcel boundaries, ownership and parcel numbers. Within the study area, large property owners include the Tucson International Airport, the City of Tucson, Granite Construction, and Cemex Construction. As previously described, there are several existing land uses in the area including the City of Tucson Los Reales Landfill, the United Sports Arizona Race Park, and the Granite Construction Swan Road Plant. These key land uses are shown on an aerial map in **Exhibit 2-5**. In addition, there are several other mining and processing operations located between Alvernon Way and Swan Road. The remaining vacant land is largely owned by the Tucson Airport Authority, the City of Tucson, and the State of Arizona.

#### 2.2.1 Active Land Development

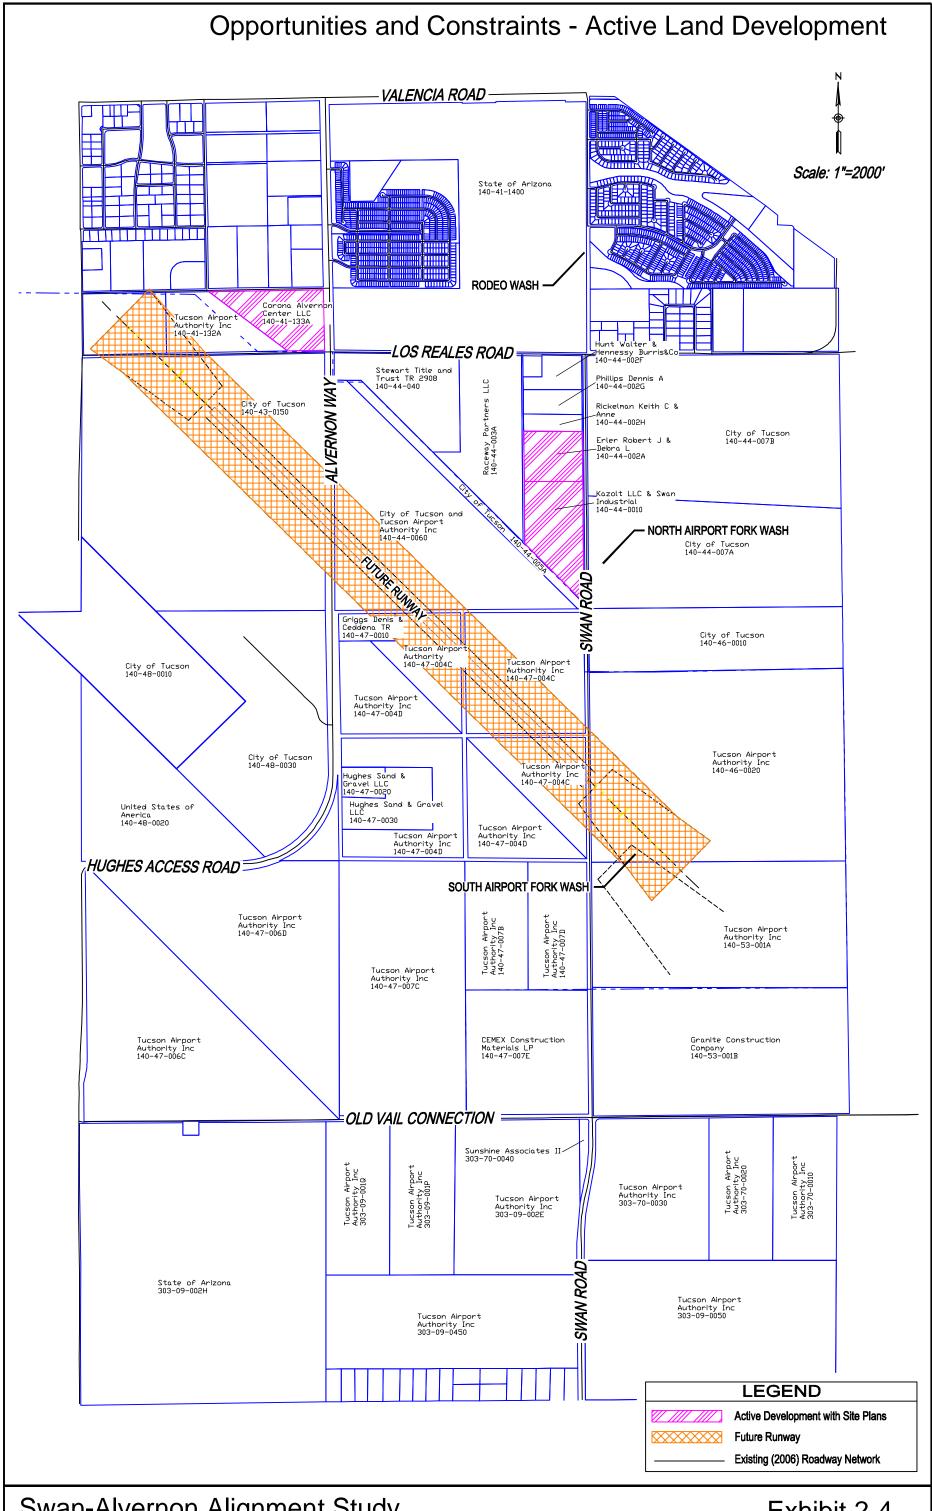

The majority of the privately owned land is located on the north side of Los Reales near Alvernon Way and along the west side of Swan Road south of Los Reales. According to the Pima County Comprehensive Land Use Plan, all the privately held property within the study area is zoned Urban Industrial. To determine if any development activity has occurred on these parcels, information was obtained from Pima County Development Services and Planning and Zoning staff. According to interviews and research, the following activities have occurred:

- Sonoran Business Park Parcel 140-41-133A
- Erler Development Parcel 140-44-002A
- Swan Industrial Park Parcel 140-44-0010

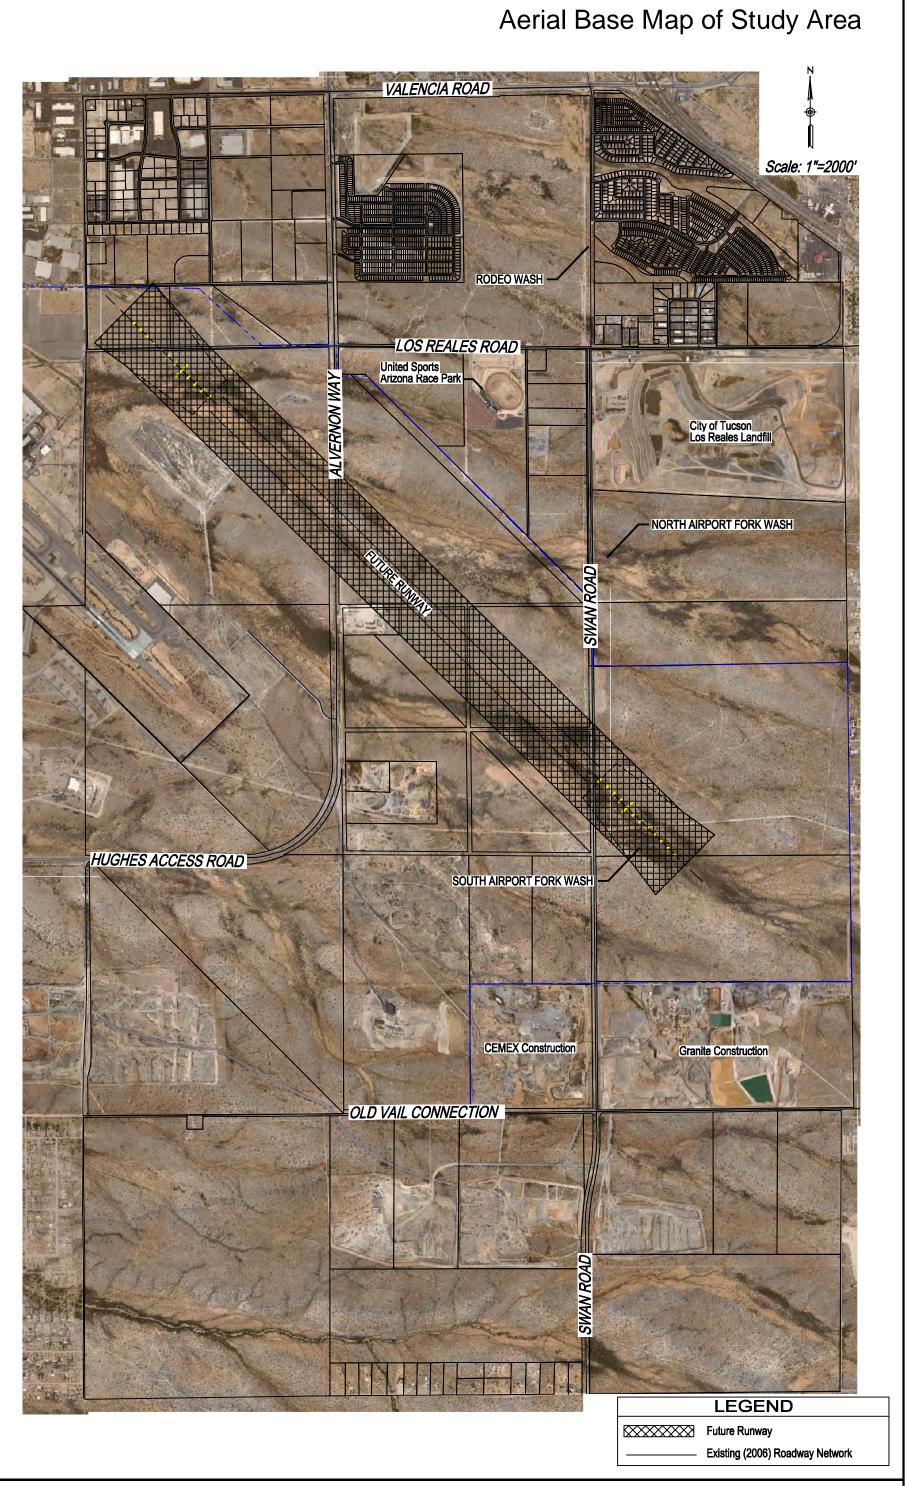

These properties are shown in Exhibit 2-4.

The City of Tucson property south of the existing Los Reales Landfill (at the southeast corner of Swan Road and Los Reales Road) is held primarily for the expansion of the Los Reales Landfill to the south.

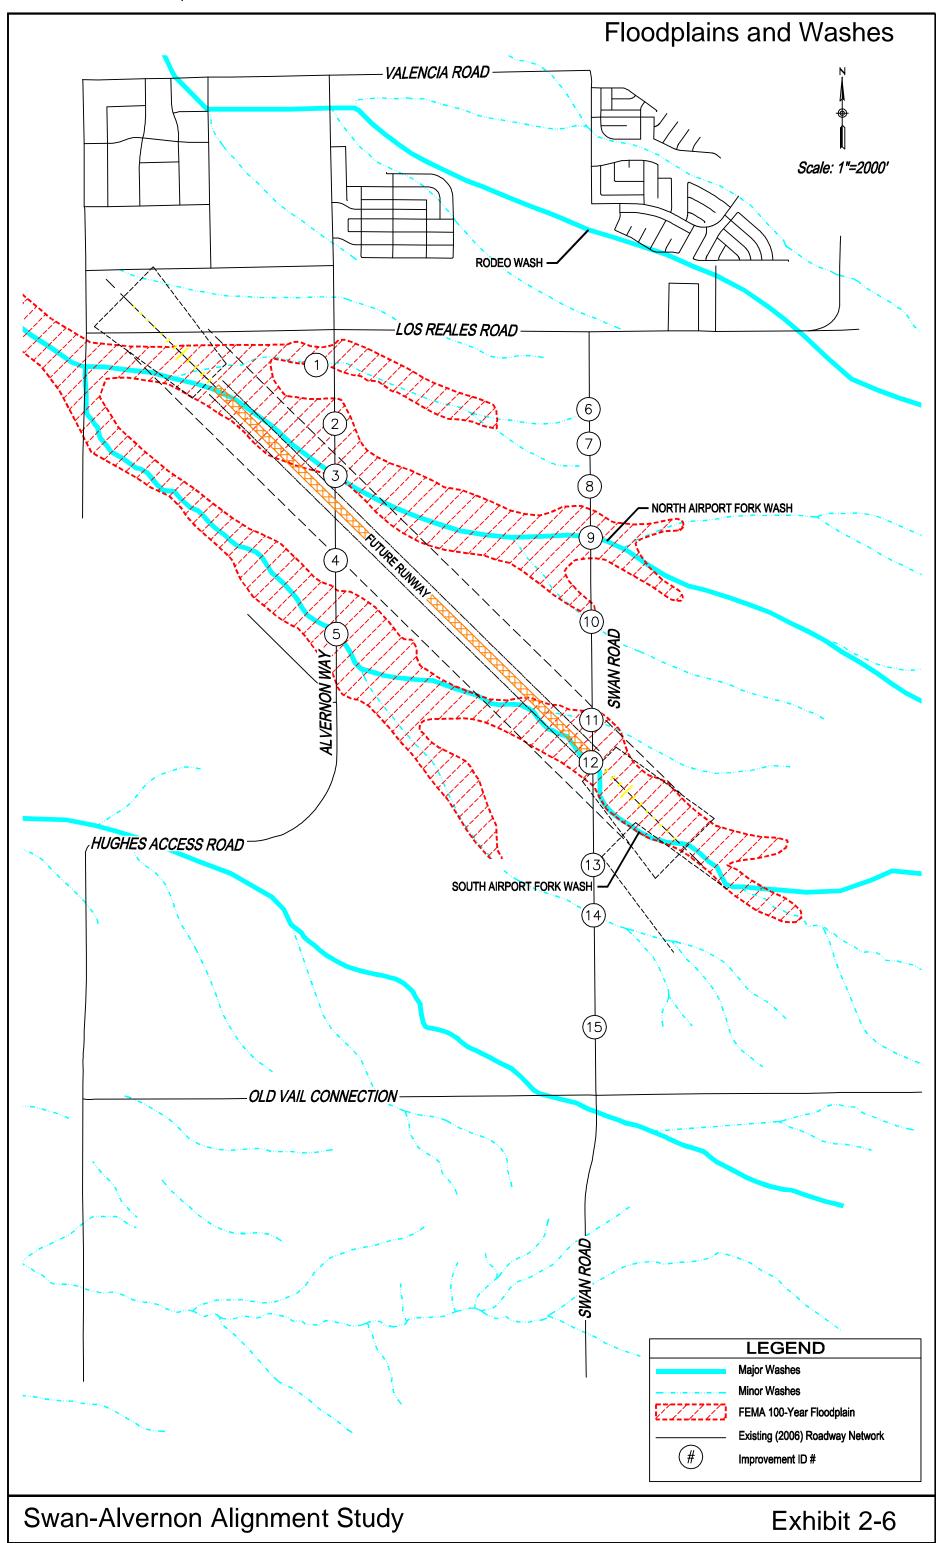

#### 2.3 FLOODPLAINS AND WASHES

The project study area roadways cross the Airport Wash, Hughes Wash, and Rodeo Wash watersheds. The FEMA 100-Year Floodplain boundaries are shown in **Exhibit 2-6**. All alignments will cross the south and north fork of the Airport Wash, which both have FEMA 100-year floodplains. **Exhibit 2-7** provides information on the name, type of drainage structure at the wash crossing and wash discharge (if available) in the study area.

EXHIBIT 2-7 – MAJOR WASH CROSSINGS IN THE STUDY AREA

Improvement ID #	Name	Drainage Structures	Discharge (cubic feet per second)		
Alvernon Way Wash Crossings					
1	Tributary to North Fork Airport Wash	box culvert	671		
2	North Fork Airport Wash	culvert	Not available		
3	North Fork Airport Wash	box culvert	1871		
4	Unnamed	culvert	Not available		
5	South Fork Airport Wash	box culvert	3260		
	Swan Road Wa	ash Crossings			
6	Tributary to North Fork Airport Wash	4-48" corregated metal pipes	Not available		
7	Tributary to North Fork Airport Wash	1-48" corrugated metal pipes	Not available		
8	Tributary to North Fork Airport Wash	14-72"x44"Arch corrugated metal pipes	Not available		
9	North Fork Airport Wash	15-72"x44" Arch corrugated metal pipes	1900		
10	Tributary to North Fork Airport Wash	3-72"x44"Arch corrugated metal pipes	Not available		
11	Tributary to South Fork Airport Wash	15-72"x44" Arch corrugated metal pipes	359		
12	South Fork Airport Wash	15-72"x44" Arch corrugated metal pipes	3249		
13	Unnamed	2-36" corrugated metal pipes	Not available		
14	Tributary to South Fork Airport Wash	7-72"x44" Arch corrugated metal pipes	674		
15	Unnamed	1-36" corrugated metal pipes	Not available		

#### 2.4 ENVIRONMENTAL CONDITIONS

An environmental screening of the study area was performed using the questionnaire format presented in the *Pima County Roadway Design Manual, December 2003*. This questionnaire is intended to provide early information about the intended effects of the project on the surrounding natural, physical, and cultural environment. The environmental screening questionnaire for this project is provided in **Appendix A**, and is summarized in this section as follows:

- 1) **Cultural Resources** A search was made of the AZSITE Database, which is a consolidated informational network of recorded archaeological sites, historic properties, districts, and inventory surveys within the state of Arizona. It is designed to reduce the amount of research time required for class 1 surveys and to provide a database for research projects. Cultural resource screening included a review of State Historic Preservation Office files regarding properties listed on or eligible for the National Register of Historic Places. Database searches did not reveal any historic structures or known cultural sites within the project limits, but the project area has not been fully surveyed for these resources.
- 2) **Hazardous Materials** Database searches were performed using the Arizona Department of Environmental Quality databases. No hazardous materials were revealed within the project limits. It should be noted that some potential hazardous material generators are located outside of the project limit. If new right-of-way is required, a Phase I ESA Report (Innocent landowner defense) will be needed to determine the existence of contaminated land and any required remediation.
- 3) **Clean Water Act Permitting** A review of the aerial mapping determined that several drainages will be crossed with a new alignment. It is assumed that some form of impact will occur to these potential Waters of the United States for culverts or bridge crossings; therefore a Nationwide Permit #14 for Linear Transportation Projects may be required for this project.

There are two main permitting processes that the U.S. Army Corps of Engineers (Corps) use to document compliance with the Clean Water Act; these two process are called 1) Nationwide Permits (NWP) and 2) Individual Permits (IP). The NWP program was established by the Corp to reduce processing time of the Corps for projects that historically are known not to cause too much environmental impacts. Under the NWP program, project constituents must document how their project is in compliance with the standard general conditions of the permit before they will be issued a permit.

Impact thresholds for Nationwide Permit 14 are:

- 0 to 0.1 acre impact A formal permit application submittal to the Corps of Engineers is typically not required, however there is an obligation to keep in their files (and share with the Corps if asked) how they are in compliance with the conditions of the program.
- 0.1 to 0.49 acre impact a Pre-construction notification (PCN) that is required if impacting more than a 0.1 of an acre to Waters of the U.S.
- Greater than 0.49 acre impact an Individual Permit will be required.

The Corps can request a full permit submittal on any project, no matter how small the impacts, if there is strong public opposition to the project, or if impacts to threatened or endangered species (Endangered Species Act) may be involved, or if cultural resources might be impacted by project components (National Historic Preservation Act). NWP typically take 4-6 months to obtain.

An **Individual Permit** (**IP**) is required for linear transportation projects that impact more than 0.49 acres of Waters of the U.S. This is a much more lengthy process to document compliance with the Clean Water Act and will require several supporting technical reports to be prepared. These reports include: a NEPA –EA analysis, a alternative analysis report, a mitigation and monitoring report, as well as a public notice and possible public hearing if strong opposition is documented during the public comment period. Individual permits typically take 9 months to 1 year to obtain but can exceed 18 months on occasion due to opposition to the project.

4) **Biological Resources** – Databases for federal, state and county sensitive species were reviewed to determine the biological resources within the corridors. Initially, a review of Federally listed Threatened and Endangered species for Pima County were reviewed using the United States Fish and Wildlife Service database. Next, the Arizona Game and Fish Department online search tool was used to determine state sensitive species in Pima County. A summary of Arizona Game and Fish Department Sensitive Species that may occur in the project area are provided in **Exhibit 2-7**. Thirdly, the Pima County Priority Vulnerable Species list (part of the Sonoran Desert Conservation Plan) was reviewed to determine further sensitive species specific to Pima County. These species are summarized in **Exhibit 2-8**.

# EXHIBIT 2-7 – ARIZONA GAME AND FISH DEPARTMENT SENSITIVE SPECIES LIST THAT MAY OCCUR WITHIN THE ALVERNON SWAN ROAD RE-ALIGNMENT STUDY AREA IN PIMA COUNTY, ARIZONA

Common Name	Species	
Birds		
Western Yellow-Billed Cuckoo	Coccyzus americanus occidentalis	
Plant		
Pima pineapple cactus	Coryphantha scheeria var robustispina	
Reptile		
Great plains narrow-mouthed toad	Gastrophryne olivacea

## EXHIBIT 2-8 – SPECIES LISTED IN THE PIMA COUNTY PRIORITY VULNERABLE SPECIES DOCUMENT THAT MAY OCCUR WITHIN THE ALVERNON SWAN RE-ALIGNMENT STUDY AREA

Common Name	Species Name
Whiptail lizard	Cnemidophorus burti
Bell's vireo	Vireo bellii
Desert box turtle	Terrapene ornata luteola
Rufous-winged sparrow	Aimophila carpalis
Tumamoc globeberry	Tumamoca macdougalii

Source: Sonoran Desert Conservation Plan

#### 2.5 UTILITIES

Utility information was obtained via a request for information from utility companies within the study roadway network. A summary of utility information that was obtained is summarized in **Exhibit 2-9**. Copies of the response letters are provided in the **Appendix**.

There are extensive electric utility lines in the study area. On Swan Road, south of Los Reales Road, there is a 138kV, 3-circuit transmission line on the west side of Swan Road, and a 14kV power line on the east side of the corridor, which extends approximately 0.46 miles south of Los Reales Road.

View of Swan Road, south of Los Reales Road, looking south. This views shows the 138,000 power lines on the west side of the road, and the 14,000 volt power lines on the east side of the road

There is a 14kV power line on Los Reales Road, which extends approximately 0.26 miles west of Swan Road, and turns south to service the Tucson Raceway property.

On Alvernon Way, south of Los Reales Road, there is 46kV, 2-circuit power lines on the east and west sides of the road, which continues to Hughes Access Road. There is also a 14kV power line on the east side of Alvernon Way, which terminates south of the connection with Hughes Access Road.

View of Swan Road, south of Los Reales Road, looking north. This views shows the gas pipeline indicators (yellow poles)

Based on visual inspection, there is a gas pipelines that crosses Swan Road, approximately 0.29 miles south of Los Reales Road. The pipeline is shown by the yellow poles in the picture above.

Information from Southwest Gas indicated that there is a 4" high pressure steel main along Los Reales Road, a 2" steel service and regulator station at 8101 S. Alvernon Way, and an easement on the southeast corner of Alvernon Way and Hughes Access Road.

Response from Qwest communications indicated that Qwest has mostly aerial facilities and some buried facilities within the study area.

# EXHIBIT 2-9 – SUMMARY OF UTILITIES ON THE CORRIDOR, BASED ON RESPONSES FROM UTILITY COMPANIES

Utility Company	Response Regarding Utilities on the Corridor	Comments
Southwest Gas	<ul> <li>4" high pressure steel main along Los Reales Road</li> <li>2" steel service and regulator station at 8101 S. Alvernon Way</li> <li>Easement on the southeast corner of Alvernon Way and Hughes Access Road</li> </ul>	Southwest Gas requires a minimum separation of two feet from HP feeders and any proposed structures and a minimum of 1-foot separation from distribution facilities and proposed structures.

#### 3. IDENTIFICATION OF ALTERNATIVE ALIGNMENTS

The Alvernon / Swan alignment alternatives were developed to provide an alternative access due to the planned construction of a new airport runway that will require the shifting of the existing Alvernon Way alignment between Los Reales Road and Old Vail Road.

The alternatives were developed by a process that included the following steps:

- Identifying design criteria.
- Identifying design constraints in placing a road near the planned TIA runway.
- Developing roadway alignments to avoid right-of-way impacts to the extent possible.
- Placing the roadway to provide developable parcels to the extent possible.
- Identifying other constraints, such as drainage and right-of-way constraints and avoiding them to the extent possible.

Preliminary alignment alternatives were developed and discussed with Pima County, and feedback from the preliminary review resulted in the development of three Alvernon Way / Swan Road alternative alignments. A no-build alternative was not considered due to the fact that the planned construction of the runway will require shifting Alvernon Way.

#### 3.1 DESIGN CRITERIA

#### 3.1.1 Roadway Design Criteria

The development of alternatives was based on the following design criteria:

Facility Type: 4-lane divided urban arterial

Right-of-way width: 150 feet

**Design Speed**: 60 mph (arterial facility)

Other design criteria are provided in **Appendix C**.

#### 3.1.2 Airport Design Criteria

Special criteria were used in order to avoid conflicts with the planned airport runway. These constraints were obtained from guidelines for determining obstructions contained in the *Code of Federal Regulations, Title 14, Part 77 (Objects Affecting Navigable Airspace)*. The roadway was also located outside of the Building Restriction Line, which is a Federal Aviation Administration defined distance from the runway centerline.

#### 3.2 DESCRIPTION OF ALIGNMENT ALTERNATIVES

The Alvernon Way / Swan Road realignment alternatives are graphically depicted on **Exhibits 3-1** through **3-6**.

#### **General Network Information**

All of the draft alternatives show a new t-intersection with Hughes Access Road. This connection is provided since Hughes Access Road is a primary access road to Raytheon Missile Systems and also serves as a hazardous materials route for trucks carrying explosives, hazardous materials, and air liquid shipments to Raytheon.

#### **Alignment Alternatives**

The alternative alignments for Alvernon / Swan realignment are described as follows:

#### Alternative A – Swan Road Continuity Alignment with No Alvernon Way

In this alternative, shown in **Exhibit 3-1**, Swan Road remains the principal roadway and curves to the east in order to avoid the planned future runway extension. Alvernon Way would be closed in the vicinity of the runway extension, however fragmented segments of Alvernon Way remain adjacent to Los Reales Road and Hughes Access Road to provide access to properties in these areas.

#### Alternative B- Swan Road Continuity Alignment with an Alvernon Way Connection

This alternative, shown in **Exhibit 3-2**, is similar to Alternative A with the addition of Alvernon Way connecting to Swan Road between Los Reales Road and the North Airport Fork Wash. The new t-intersection would be approximately 1,600 feet south of Los Reales Road, and located to minimize impacts to parcels.

#### Alternative C- Alvernon Way Continuity Alignment with a Northern Swan Road Connection

In this alternative, shown in **Exhibit 3-3,** Alvernon Way extends east, aligned relatively parallel to the future planned runway, and maximizes use of a City of Tucson utility easement. The road transitions to existing Swan Road south of the runway extension. Swan Road, south of Los Reales Road, would be realigned to the west to form a t-intersection at Alvernon Way north of the Airport Fork Wash.

#### Alternative D- Alvernon Way Continuity Alignment with a Southern Swan Road Connection

This alternative, shown in **Exhibit 3-4**, also aligns parallel to the planned runway but lies further south than Alternative C. Swan Road, south of Los Reales Road, would be realigned to the west to form a t-intersection at Alvernon Way south of the Airport Fork Wash.

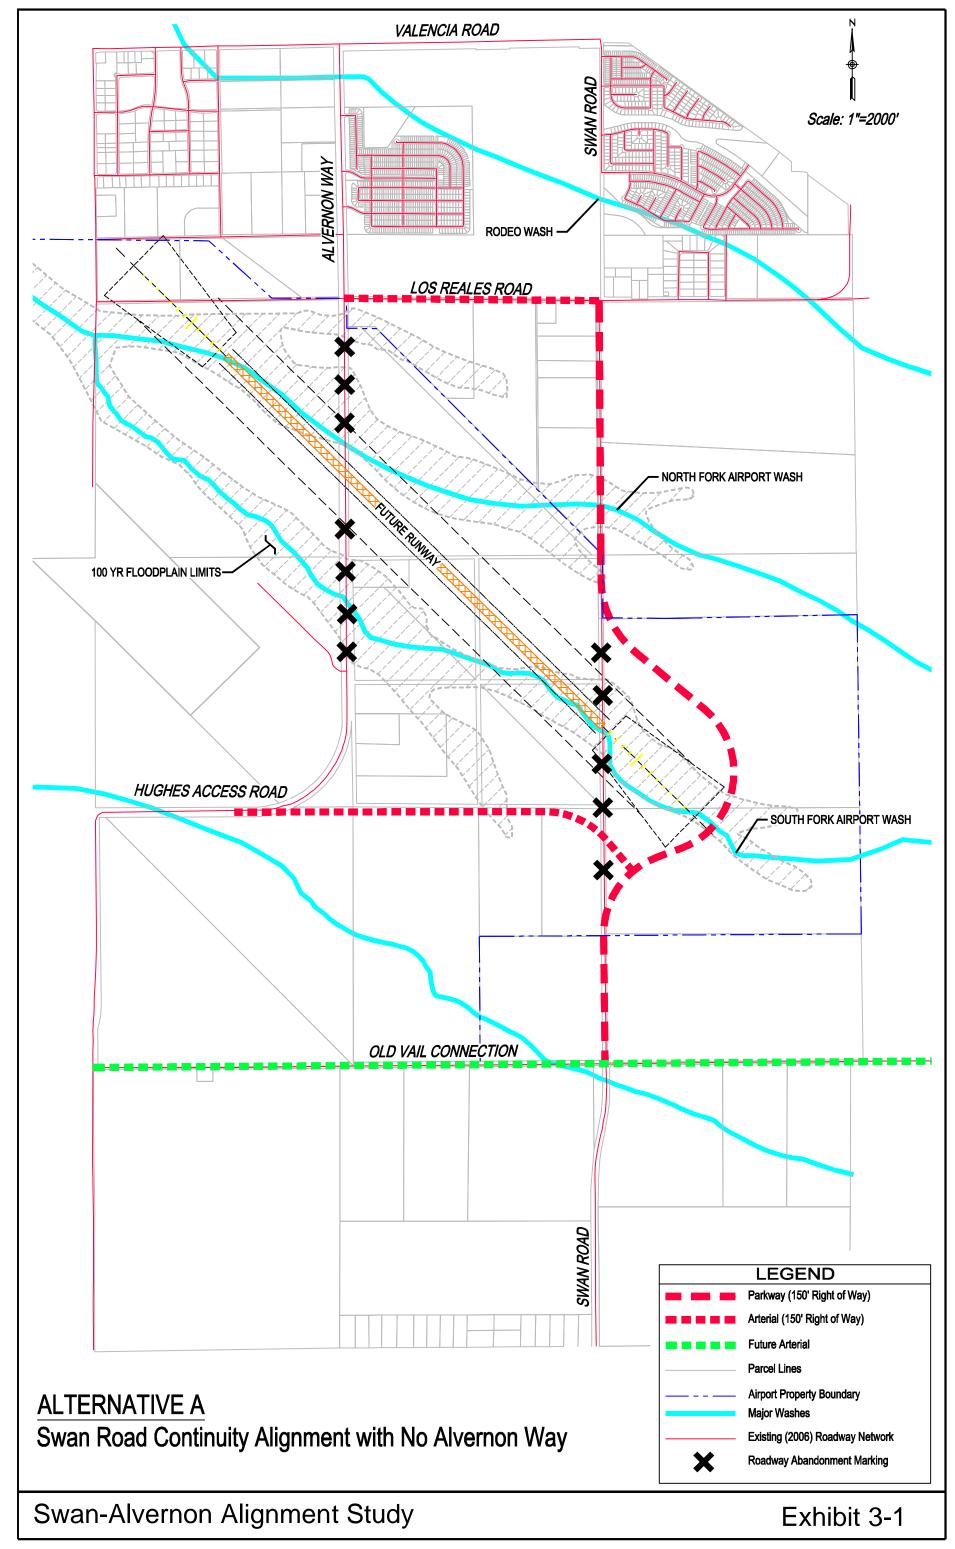

#### Alternative E- Alvernon Way Continuity Alignment for Alternative Runway Location

This alternative, shown in **Exhibit 3-5**, aligns parallel but further north of the runway to accommodate a larger range of alternative runway locations. This alternative was developed in response to correspondence from the Tucson Airport Authority indicating that more flexibility in the runway location should be assumed.

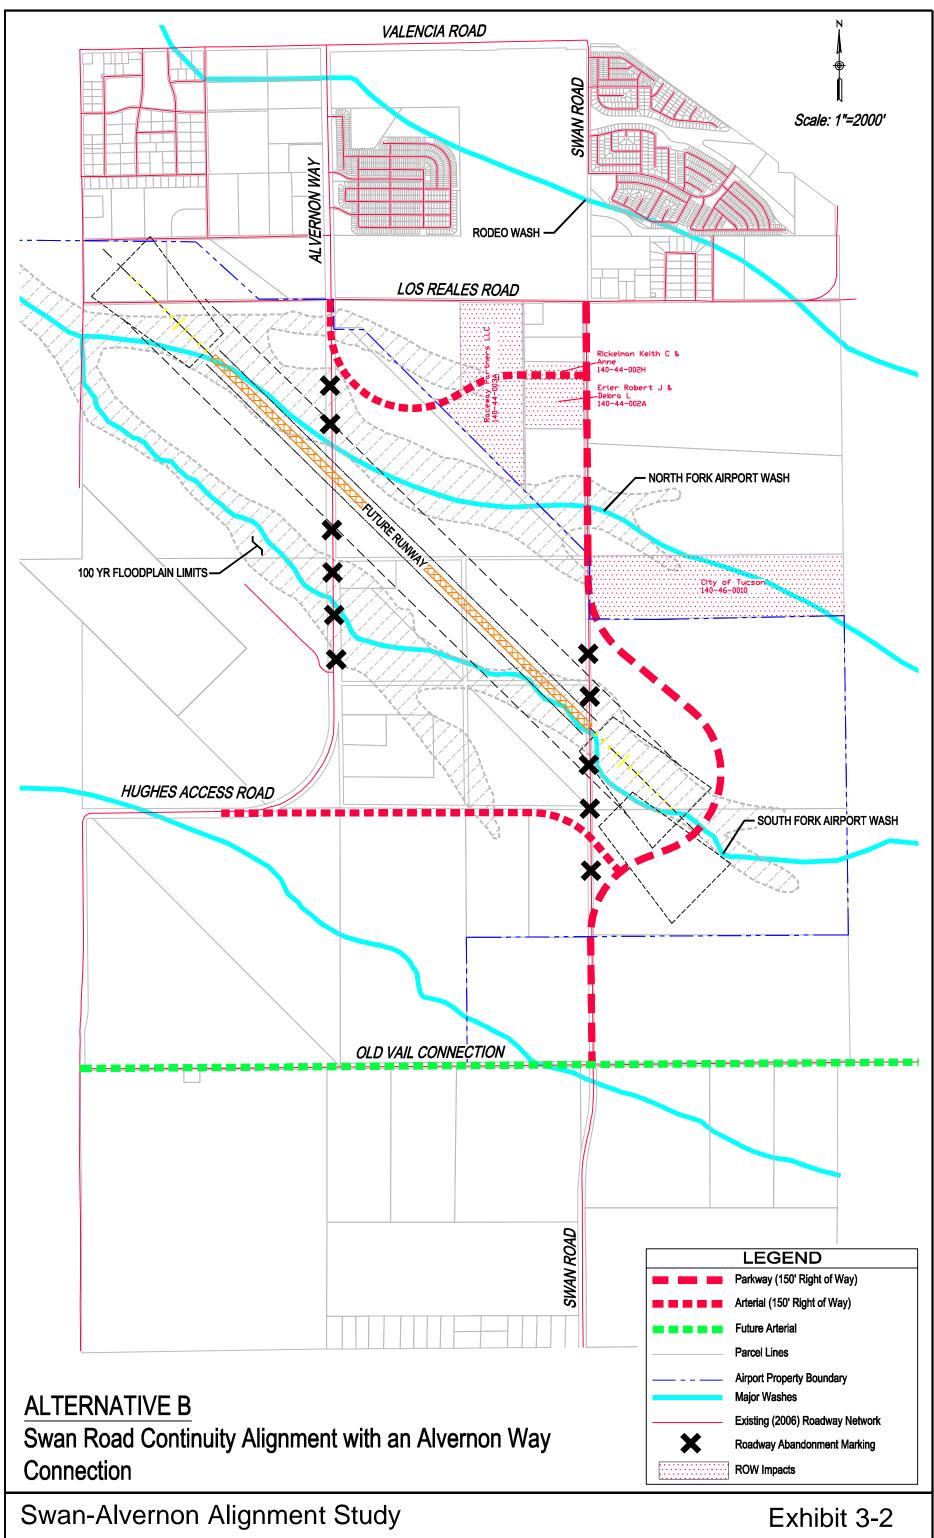

#### **Alternative F- Alvernon Way Tunnel**

This alternative, shown in **Exhibit 3-6**, is a tunnel on Alvernon Way under the runway. It involves a curvilinear alignment of Alvernon Way in order to align the tunnel with a 90 degree angle to the proposed runway.

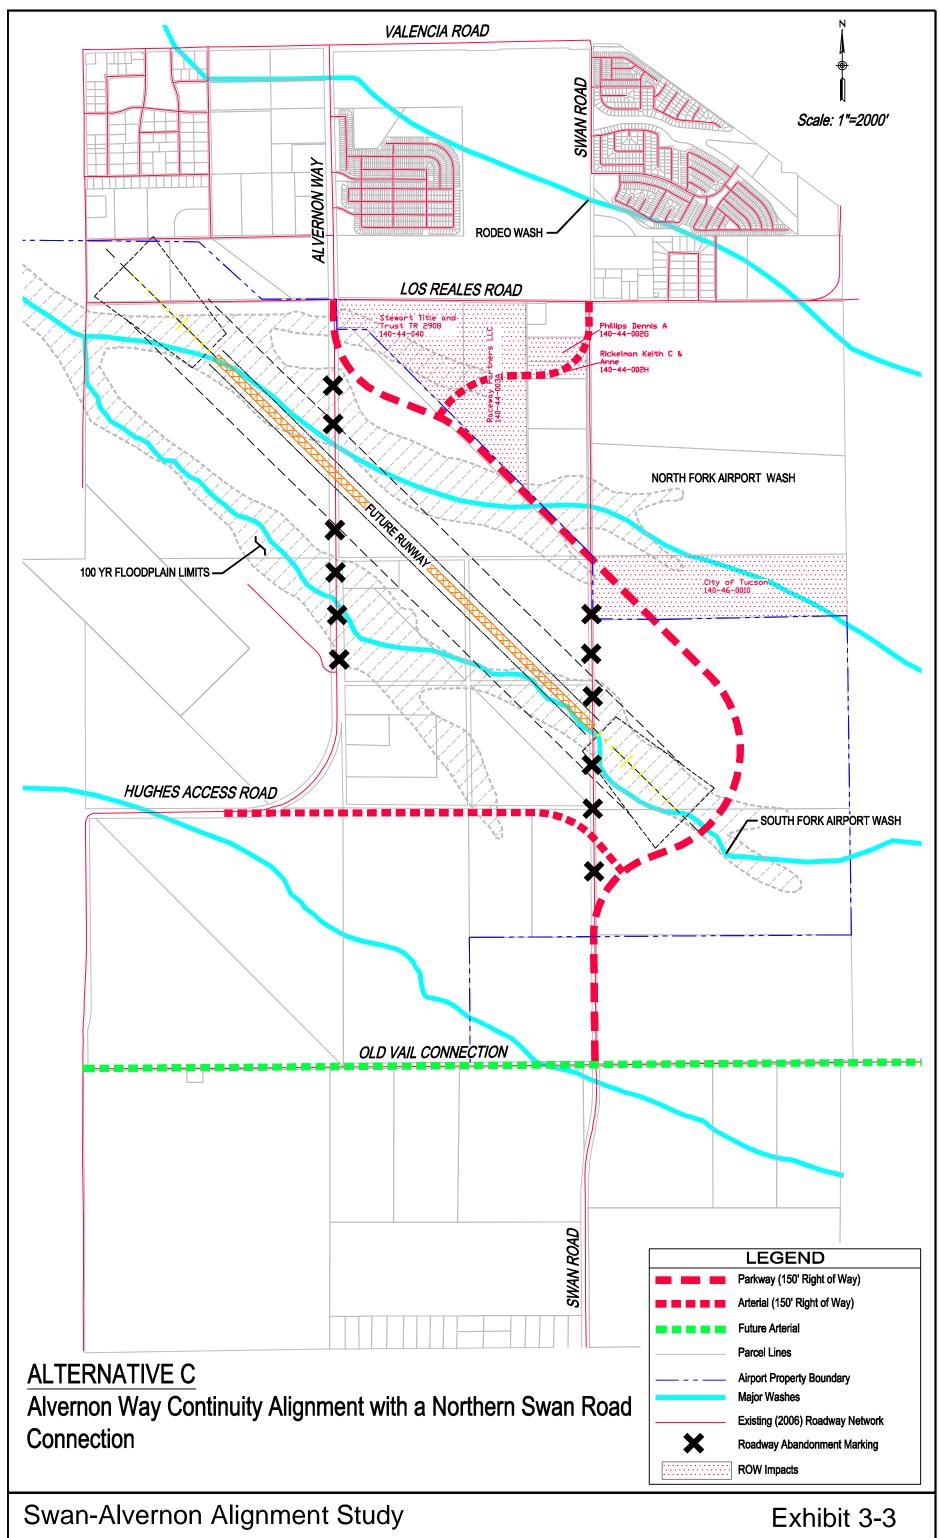

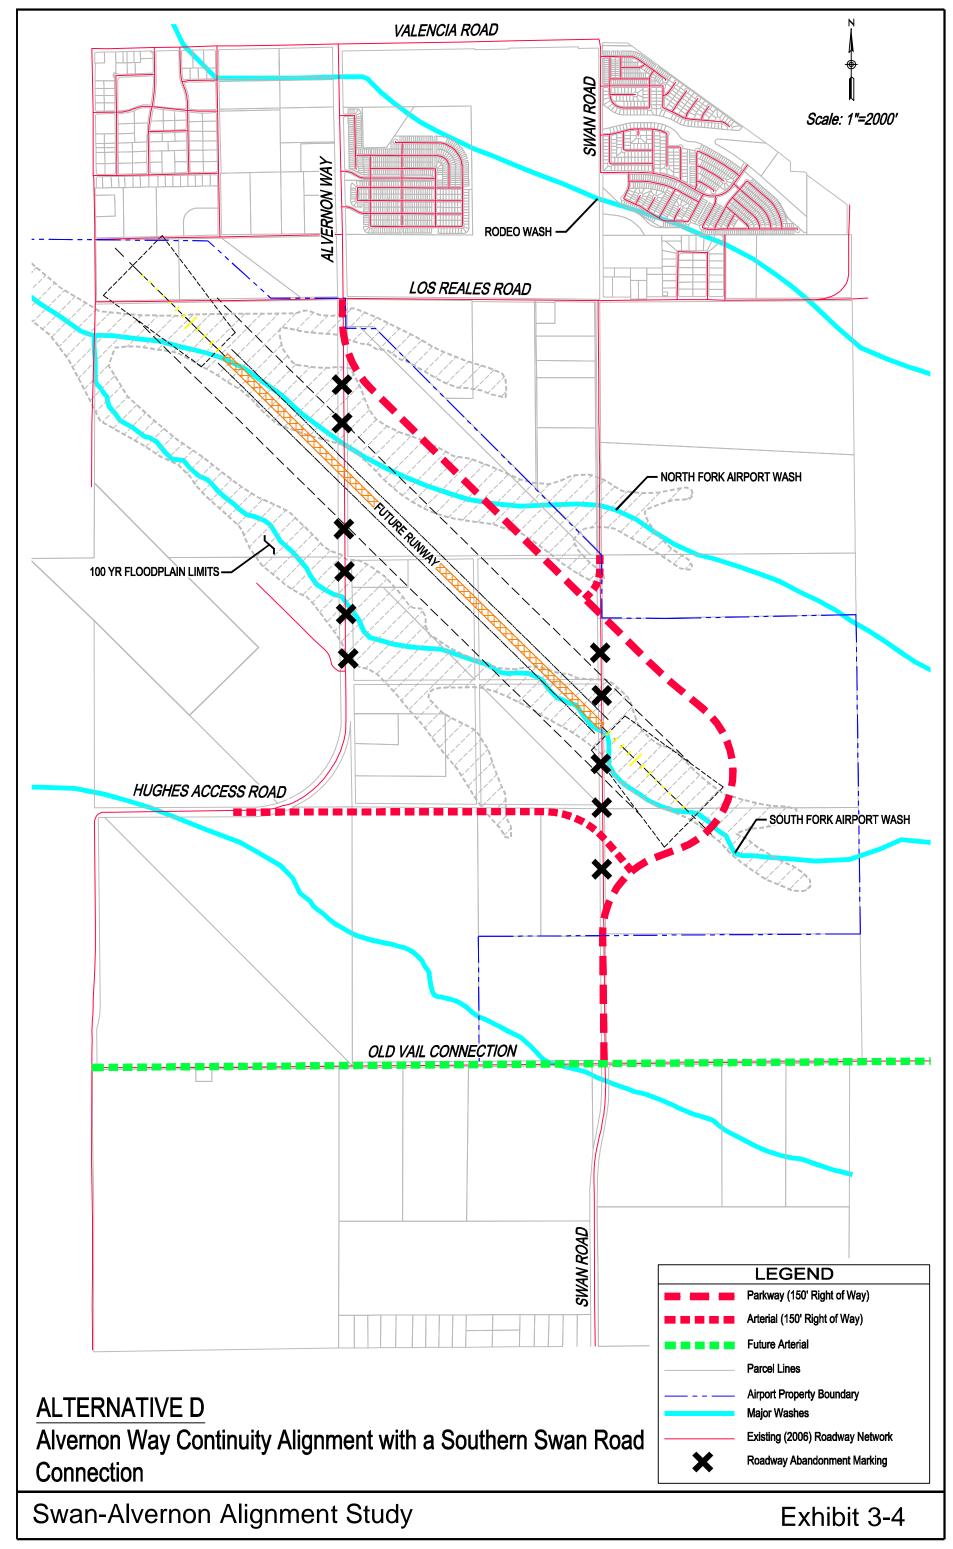

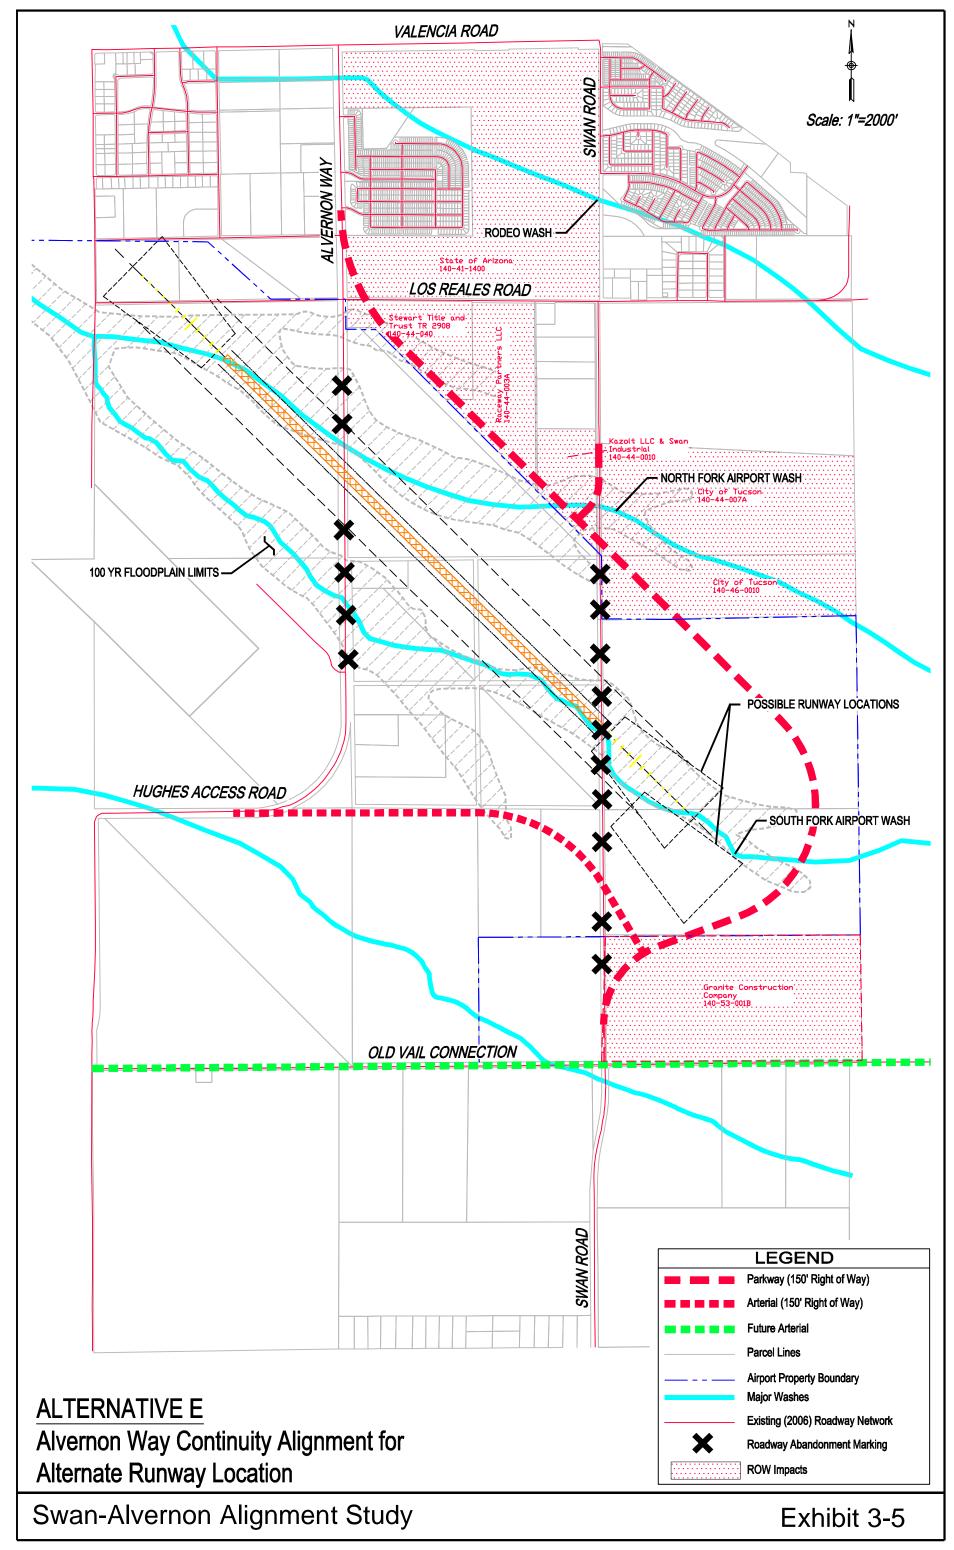

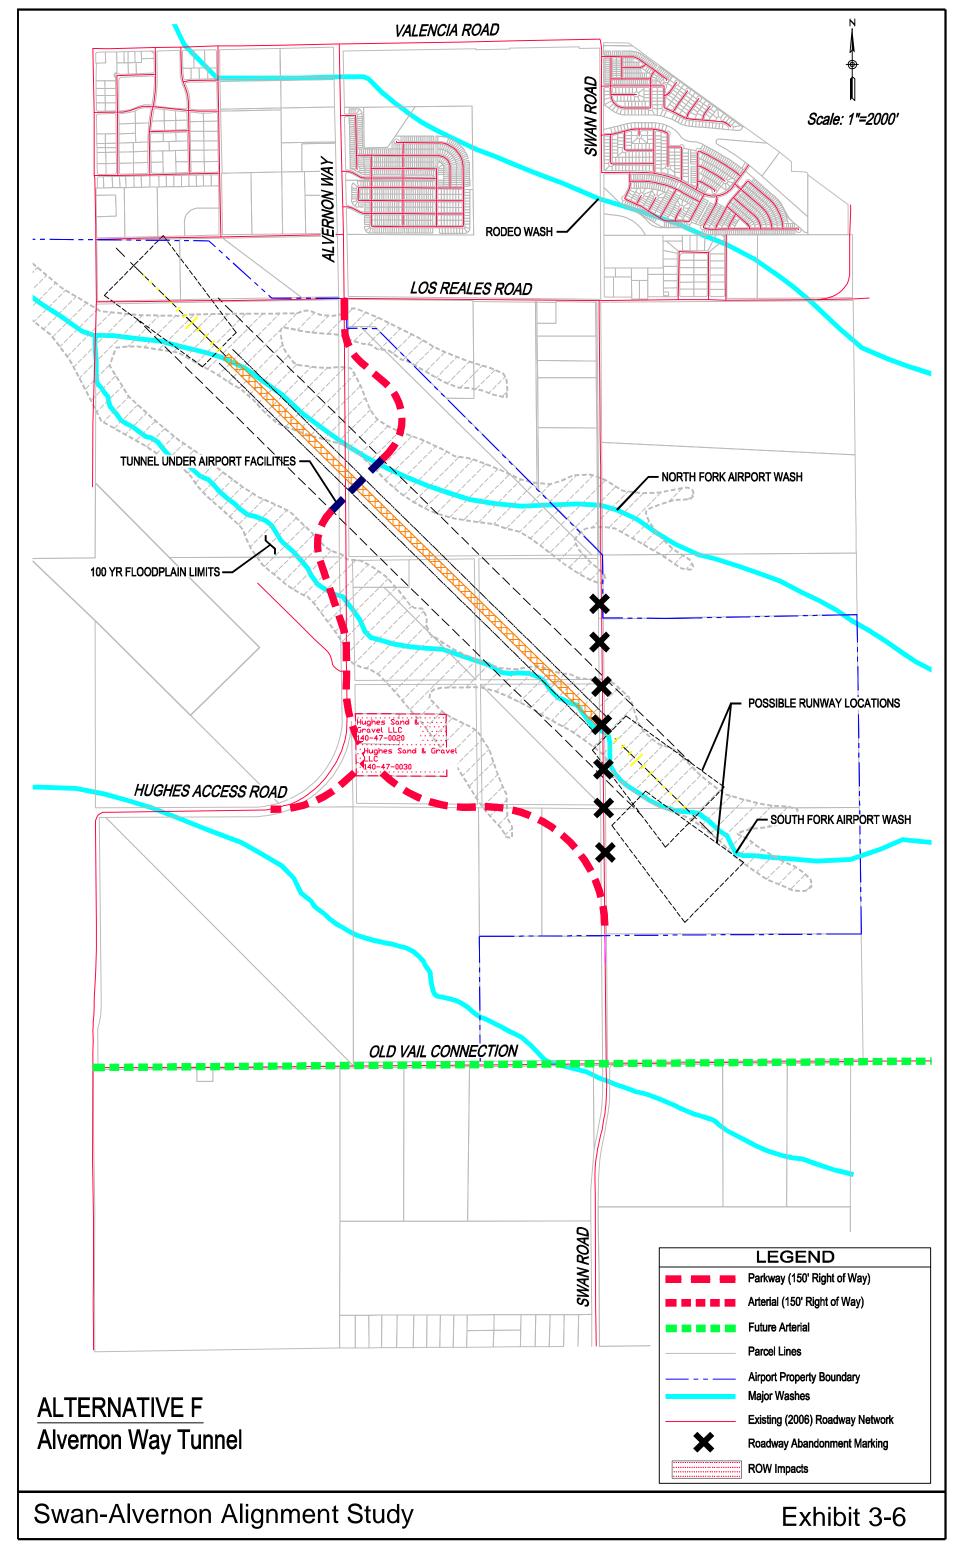

## 4. COMPARATIVE IMPACT ASSESSMENT AND ANALYSIS

This section describes the impact assessment process, which considered the following assessment criteria:

- Traffic and Access impacts
- Right-of-way impacts
- Floodplain / drainage impacts
- Potential environmental impacts
- Utility impacts
- Planning level construction costs

These assessment criteria are described in more detail in **Exhibit 4-1** below:

## EXHIBIT 4-1 – ASSESSMENT CRITERIA

Category	What is Being Assessed?	
Traffic and Access Impacts  What is the impact of the alternatives on traffic flow much "out of direction" travel is created?		
Right-of-Way / Land Ownership Impacts	What are general right-of-way impacts? What are the impacts of the alternatives on planned developments?	
Floodplain / Drainage Impacts	Would the alternative impact wash crossings in the project area? How close is the alternative to the FEMA 100-year floodplain boundary?	
Environmental Impacts	What are potential environmental impacts?	
Utility Impacts	What utilities may be impacted by the project?	
Planning Level Construction Costs	What is the planning level construction cost? This cost does not include right-of-way cost.	

## **4.1 TRAFFIC IMPACTS**

All of the alternatives except the tunnel alternative (Alternative F) will cause more circuitous travel for the traffic currently using Alvernon Way to reach Hughes Access Road. **Exhibit 4-2** summarizes out-of-direction travel from the intersection of Alvernon Way / Los Reales Road to Hughes Access Road at Alvernon Way. The distance between these two locations is 2.3 miles. As summarized in **Exhibit 4-2**, Alternative E has the most out-of-direction travel, comprising 3.6 additional miles, and Alternative F, the tunnel alternative, has the least out-of-direction travel, resulting in an additional 0.19 miles of travel. The other alternatives vary between 2 and 3 miles of out of direction travel, in one direction.

The impacts of the out-of-direction local travel resulting from Alternatives A through E may be lessened by improving the Franco Wash crossing at Old Vail Connection Road, so that residents in this area will have all weather access to Nogales Highway.

## **EXHIBIT 4-2 RELATIVE REGIONAL TRAFFIC IMPACTS**

Alternative	Out-of- Direction Travel	Relative Level of Traffic Impacts (1 =Least,	Comments
	Miles	6 =Most)	
Alternative A	2.01	2	
Alternative B	3.04	5	Alvernon Way connection to Swan Road is spaced only 1600 feet south of Los Reales Road, which may cause non-optimal signal spacing if traffic signals are required on Swan Road.
Alternative C	2.54	4	
Alternative D	2.42	3	
Alternative E	3.60	6	
Alternative F	0.19	1	

It should be noted that there is a potential for new access to the Tucson International Airport if the new roadway alignment is located closer to the planned runway. This could serve as additional airport access or could provide opportunities for development related to the airport.

## 4.2 RIGHT-OF WAY / LAND OWNERSHIP IMPACTS

All of the build alternatives for the Alvernon / Swan realignment will require 150 feet of right-of-way (ROW) to construct. All of the alternatives involve right-of-way impacts. The right-of-way on Alvernon Way, south of Los Reales Road, is 200 feet. The right-of-way on Los Reales Road, between Alvernon Way and Swan Road varies between 60 and 100 feet. The right-of-way on Swan Road, south of Los Reales Road is 100 feet. All of the alternatives impact Tucson Airport Authority property. The right-of-way requirements for a four-lane divided urban cross section can vary between 150 and 300 feet.

**Alternative A,** has right-of-way impacts to Swan Road, Los Reales Road, and within the Tucson Airport Authority property. Specific parcel impacts can vary, depending on the specific alignment of this alternative. However, because of the potential for between 5 and 14 parcels to be impacted, in addition to the Tucson Airport Authority right-of-way impacts, this alternative was ranked as having the highest potential impacts.

**Alternative B** which uses Swan Road right-of-way for a significant length, has right-of-way impacts to Swan Road and within the Tucson Airport Authority property. This alignment also impacts 4 parcels. This alignment bisects the Tucson Raceway parcel (140-44-003A), but avoids impacts to the developed, northern section of the parcel. The Alvernon Way realignment, near Swan Road, is located between two parcels (140-44-002H and a parcel with active land development, 140-44-002A) and may have some impact on both of these parcels, which cannot be determined at this level of analysis. There are impacts on the Swan Road realignment to a City of Tucson parcel (140-46-0010).

**Alternatives C** bisects 5 parcels (140-44-002G, 140-44-002H, 140-44-003A, 140-44-040, 140-46-0010) in addition to Tucson Airport Authority parcels. One of these parcels is the Tucson Raceway parcel, but similar to Alternative B, this alternative avoids impacts to the developed, northern section of the parcel. There are also right-of-way impacts to Swan Road, as the road transitions to the Swan Road alignment at both the north and south ends of the alternative.

**Alternative D** has right-of-way impacts within the Tucson Airport Authority property. There are also right-of-way impacts to Swan Road, at the south end of the alternative.

**Alternative E,** which extends the realignment of Alvernon Way further east, impacts 7 parcels in addition to the Tucson Airport Authority property. These parcels are:

- 140-41-1400
- 140-44-040
- 140-44-003A
- 140-44-0010
- 140-44-007A
- 140-46-0010
- 140-53-001B

The property impacts include impacts to 1 parcel with active land development plans (140-44-0010). This alternative may also impact access to the Granite Construction company driveway (parcel number

140-53-001B). This alignment also has some right-of-way impacts to Swan Road, as the alternative transitions to Swan Road at the south end of the alignment.

**Alternative F**, the tunnel alternative, bisects 2 parcels, in addition to Tucson Airport Authority property. These parcels are both owned by Hughes Sand and Gravel (parcel numbers 140-47-0020 and 140-47-0030).

A comparison of right-of-way impacts can be summarized in **Exhibit 4-3** as follows:

EXHIBIT 4-3 – RELATIVE RIGHT-OF-WAY IMPACTS

Alternative	Relative Level of Right-of-Way Impacts (1 =Least ROW impacts, 6 =Most ROW Impacts)
Alternative A	6
Alternative B	3
Alternative C	4
Alternative D	1
Alternative E	5
Alternative F	2

## 4.3 FLOODPLAIN / DRAINAGE IMPACTS

The project study area is located within the Airport Wash, Hughes Wash, and Rodeo Wash watersheds. All the roadway alignments will require large structures in order for the roadway to be considered all weather roads, to cross the South Airport Fork Wash. A review of the aerial mapping determined that several drainages will be crossed with a new alignment. All alignments will cross the South and North Airport Fork Washes, which both have FEMA 100-year floodplains. Alternative A, however, has minimal impacts on the North Airport Fork Wash.

It is assumed that some form of impact will occur to these potential Waters of the U.S. for culverts or bridge crossing; therefore a nationwide permit #14 may be required. If impacts to an individual 404 resource are more than 0.5 acres, then an Individual Permit will be required.

The alternatives were assessed in relation to one another based on the number of wash crossings, and whether the alternative crossed the wash at an angle, which would likely require more drainage structures. **Exhibit 4-4** summarizes these impacts.

**EXHIBIT 4-4 - RELATIVE WASH IMPACTS** 

Alternative	Relative Level of Wash Impacts	Comments
Aitemative	(1 =Least , 6=Most wash and floodplain Impacts)	
Alternative A	1	Impacts on North Fork Airport Wash. Impacts South Fork Airport Wash and tributary
Alternative B	2	Impacts South Fork Airport Wash and tributary. Alvernon connection impacts North Fork Airport Wash tributary
Alternative C	3	Impacts North Fork Airport Wash and tributary at an angle, therefore a relatively larger drainage structures would be required. Also impacts South Fork Airport Wash and tributary
Alternative D	5	Impacts North Airport Fork Wash and tributary at an angle, therefore a relatively larger drainage structures would be required. Also impacts South Fork Airport Wash and tributary
Alternative E	4	Impacts North Fork Airport Wash at an angle, therefore a relatively larger drainage structures would be required. Also impacts South Fork Airport Wash and tributary
Alternative F	6	Impacts North and South Airport Fork Washes at an angle, therefore relatively larger drainage structures would be required. Hughes Access Road connection impacts tributary to South Fork Airport Wash

## 4.4 ENVIRONMENTAL IMPACTS

As stated in previously (Chapter 2), there are several environmental categories that will need further analysis once project components are better defined. Some of these items may require additional coordination with agencies to secure a permit prior to construction activities. In particular, the use of federal funds, or impacts to federal lands would require a federal NEPA review process.

In general, more surveys will need to be conducted to determine the potential for impacts to biological resources, cultural resources, and hazardous materials.

Species that need to be surveyed in the study area are:

- Western Yellow-billed Cuckoo
- Pima pineapple cactus
- Great plains narrow-mouthed toad
- Whiptail lizard
- Bell's vireo
- Desert box turtle
- Rufous-winged sparrow
- Tumamoc globeberry

Based on the need for additional survey work in many of the environmental categories, none of the alternatives rank relatively higher or lower to each other. Therefore, for the purposes of the assessment, all of the alternatives were scored as a "3". These are summarized in **Exhibit 4-5**.

EXHIBIT 4-5 – RELATIVE ENVIRONMENTAL IMPACTS

Alternative	Relative Level of Environmental Impacts (1 =Least , 6 =Most environmental impacts)
Alternative A	3
Alternative B	3
Alternative C	3
Alternative D	3
Alternative E	3
Alternative F	3

## **4.5 UTILITY IMPACTS**

The assessment of utility impacts was assessed based on the responses to the utility letter sent early in the project to utility providers in the area. As a limited response was received to the request, further research is required in this area during a future design concept phase. Based in the responses, a key utility impact is the power lines that are located on the west side of Swan Road.

Because of the limited response to the utility requests, alternatives were rated similarly in this category although the impacts need to be assessed further in a design concept phase.

Alternative A has the potential to impact the 46 kV and 14 kV power lines near Hughes Access Road and has the 138 kV power line on the west side of Swan Road, near Hughes Access Road.

Alternative B has the potential to impact the 46 kV and 14 kV power lines near Hughes Access Road. The extension of Alvernon Way to Swan Road may impact the 46 kV and 14 kV power lines on Alvernon Way, the 14 kV power lines to the Tucson Raceway, and the 138 kV power line on Swan Road. The 138 kV power line may also be impacted by the Hughes Access Road relocation to Swan Road. This alternative also has the potential to impact the gas line which crosses Swan Road.

Alternative C has similar potential impacts to those described for Alternative B above.

Alternative D has the potential to impact the 46 kV and 14 kV power lines near Hughes Access Road. The extension of Alvernon Way to Swan Road may impact the 46 kV and 14 kV power lines on Alvernon Way, and the 138 kV power line on Swan Road. The 138 kV power line may also be impacted by the Hughes Access Road relocation to Swan Road.

Alternative E has similar impacts to those described for Alternative D above.

Alternative F has the potential to cross the 46~kV and 14~kV power lines on Alvernon Way at a number of locations, depending on the specific alignment chosen. There is also the potential to impact a 138~kV power line on Swan Road.

## EXHIBIT 4-6 – RELATIVE UTILITY IMPACTS

Alternative	Relative Level of Utility Impacts (1 =Least , 6 =Most utility impacts)
Alternative A	3
Alternative B	3
Alternative C	3
Alternative D	3
Alternative E	3
Alternative F	3

## 4.6 COSTS

A summary of planning level costs by alternative is provided in **Exhibit 4-4**. The exhibit also shows the miles of new roadway needed for each alternative. A planning level cost per mile was developed for alternatives A through E, and was applied to the length of new roadway required. In this way, costs are comparable between alternatives. Cost estimates do not include right-of-way costs, or utility relocation costs, or drainage costs. Alternative F, the tunnel alternative, is the most expensive alternative, because of the cost of the tunnel structure, and infrastructure improvements associated with the tunnel. Alternative D is the least expensive alternative. The cost estimates are provided in more detail in **Appendix C.** 

EXHIBIT 4-4 – RELATIVE PROJECT COSTS

Alternative	Miles of New Roadway Needed (Assume 4-Lane divided roadway)	Estimated Cost (\$ Million)	Relative Cost (1 =Least Cost, 6=Most Expensive)
A – Swan Road Continuity	6.12 miles:	\$29.5	2
Alignment with No Alvernon Way	Swan Road: 3.45		
	Los Reales Road: 1.01		
	Hughes Access Road: 1.66		
B- Swan Road Continuity	6.43 miles:	\$30.7	3
Alignment with an Alvernon Way Connection to Swan	Swan Road: 3.45		
	Hughes Access Road: 1.66		
	Alvernon Way: 1.32		
C - Alvernon Way Continuity	6.69 miles:	\$31.7	4
Alignment with a Northern Swan Road Connection	Swan Road: 0.84 miles		
(options provided for Swan and	Hughes Access Road: 1.66		
Alvernon realignments)	Alvernon Way: 4.19 miles		
D – Alvernon Way Continuity	5.72 miles:	\$27.9	1
Alignment with a southern Swan Road Connection	Swan Road: 0.19		
	Hughes Access Road: 1.66		
	Alvernon Way: 3.87		
E-Alvernon Way Continuity	6.59 miles:	\$32.5	5
Alignment for Alternate Runway Location	Swan Road: 0.33		
	Hughes Access Road: 1.88		
	Alvernon Way: 4.38		
F – Alvernon Tunnel	3.31 miles:	\$76.1	6
	Alvernon Way: 3.31 (including 0.28 mile (1500 foot) tunnel.		

## 5. CONCLUSIONS AND RECOMMENDATIONS

A summary of the relative rankings of each project alternative in the assessment areas discussed above are summarized in **Exhibit 5-1**. The alternatives were evaluated relative to each other, with the highest score (6) given to the alternative that was the worst (e.g. had the highest level of impacts) in comparison to the other alternatives.

EXHIBIT 5-1 – SUMMARY OF IMPACT SCORING BY ALTERNATIVE

	Alternative					
Category	A Swan Road Continuity Alignment with no Alvernon Way	B Swan Road Continuity Alignment with and Alvernon Way Connection	C Alvernon Way Continuity Alignment with a Northern Swan Road Alignment	D Alvernon Way Continuity Alignment with a Southern Swan Road Connection	E Alvernon Way Continuity Alignment for Alternate Runway Location	F Alvernon Way Tunnel
Traffic Impacts	2	5	4	3	6	1
Right-of-Way / Active Land Development Impacts	6	3	4	1	5	2
Floodplain / Drainage Impacts	1	2	3	5	4	6
Environmental Impacts	3	3	3	3	3	3
Utility Impacts	3	3	3	3	3	3
Planning Level Costs	2	3	4	1	5	6
<b>Total Score</b>	17	19	21	16	26	21

1 = the least impacts, 5 =most impacts (e.g. the worst for that category). Note that costs are rated on a 1 through 6 scale, since there are 6 alternatives

The analysis indicates that Alternatives A (Swan Continuity Alignment with no Alvernon Way connection) and Alternative D (Alvernon Way Continuity Alignment with a Southern Swan Road Connection) rank better in comparison to the other alternatives. However, both of these alternatives will result in out of direction travel for local residents and Raytheon employees and it may not accommodate the full range of Airport runway alternatives that was accommodated by Alternative E. The impacts of the out-of-direction local travel may be lessened by improving the Franco Wash crossing at Old Vail Connection Road, so that residents in this area will have all weather access to Old

Nogales Highway. At the design concept level of analysis, a consideration will be to upgrade Old Vail Connection Road to provide additional access in this area.

The analysis indicates that Alternative F, the tunnel alternative, will provide a better level of local and regional traffic circulation, although at a much higher cost. It will avoid increases in out-of-direction travel for residents in the vicinity of the study area.

Further research, through development of a design concept report, is needed to further define specific impacts, particularly in the areas of environmental, utility, and right-of-way impacts.

• Note any issues for coordination that have been identified to date:
•Briefly describe coordination efforts planned or underway:
PUBLIC INVOLVEMENT
<ul> <li>Has a Public Involvement Plan been developed for the project? Yes No</li> </ul>
• Has a Citizen Advisory Committee been formed, or is one being formed? Yes No√
• Have any public meetings been scheduled? Yes No $$ If "yes", have any meetings been held to date?
• Has any information useful to project development been identified though any public interaction to
date? YesNo\sqrt{1} "yes", briefly describe: Meetings with stakeholders, e.g. Raytheon, City of
Tucson
Is there any known controversy over this project to date? Yes No $\underline{\hspace{0.1cm}}$ If "yes", briefly
describe:
Source:
PERMITS
• Anticipated permits and/or approvals? <u>To be determined</u> 404 Permit:

# APPENDIX B TYPICAL CROSS SECTION

# APPENDIX C - DESIGN CRITERIA AND COST ESTIMATES

## ALVERNON WAY – SWAN ROAD REALIGNMENT KHA JOB No. 098022015

#### DESIGN YEAR TBD

**Cross section** Standard Typical Section for 4-lane divided roadway, Figure 2-7, Pima County Department of Transportation Standard Typical Section. This typical section is provided in the Appendix, and includes 6 foot shoulders, four travel lanes (two are 12 wide, two are 13 feet wide), and one 24 foot mountable curbed median.

DESIGN SPEED 60 mph (45mph posted)

MAINLINE DESIGN VEHICLE WB-50 Intermediate Semi-trailer

SIDE ROAD DESIGN VEHICLE SU Single Unit Commercial Truck

ROADWAY TYPICAL SECTION PCDOT Standard Figure 2-7

#### **CLEAR ZONE**

MAINLINE CLEARZONE	TBD
MAINLINE RECOVERY AREA	TBD
SIDE ROAD CLEARZONE	10' minimum (AASHTO 2004 p 319,387)
SIDE ROAD RECOVERY AREA	TBD

## **SLOPES**

Mainline	Min 4:1. 6:1 or Flatter Desirable (RDG chap. 3)
	Min 4:1, 6:1 or Flatter Desirable (RDG chap. 3)

## HORIZONTAL ALIGNMENT

	Mainline
MIN RADIUS W/ NORMAL CROWN	10,000'
MIN RADIUS W/ MAX SUPERELEVATION	1500'
RUNOFF @ 4% (2 LANES ROTATED)	160'
MAX SUPERELEVATION	0.04'/ft (or 4%)
MIN LENGTH OF CURVE	TBD

#### **VERTICAL ALIGNMENT**

	Mainline
MAX GRADIENT	3% (AASHTO 2004, p 446 - Level 50mph)
MIN GRADIENT	0.5%, to allow for drainage (per PCDOT request 11/13/2007)
MIN VERTICAL CURVE LENGTH	TBD
MAX VERTICAL CURVE LENGTH	Crest VC: TBD' (AASHTO, pg 272) K (max)=151 Sag VC: TBD' (AASHTO, pg 277) ) K (max)=136 Calculated using L=KA, A=6 % max downgrade to max upgrade.
SIGHT DISTANCE	Stopping Sight Distance: 570' (AASHTO, pg 112)

Project No: Alternative A

# APPENDIX D Responses to Utility Information Request Letter

## Tucson Electric Power Company

4350 East Irvington Road, Mailstop DB101 Tucson, Arizona 85714

Cynthia A. Garcia Resource Management Team Ofc: (520) 918-8246 Fax: (520) 917-8790

January 3, 2008

Mr. Rick Solis, P.E. Kimley-Horn and Associates, Inc. 2210 E. Fort Lowell Rd., Suite 200 Tucson, AZ 85719

SUBJECT: Alvernon Way Realignment Study

Dear Mr. Solis:

We have received your request for information regarding all existing and proposed utilities within the subject project area and offer the following comments:

- TEP has transmission and distribution lines in conflict with the proposed runway extension.
- Attached please find TEP facility maps showing the locations of overhead electric.
- These TEP power lines will need to be relocated to a location outside any glide path designations.
- These new locations will require a new TEP right-of-way and will be billable.

Please maintain drivable access to TEP poles, equipment and facilities. The relocation of TEP facilities such as feeder, sub-transmission and transmission lines is limited to TEP's off-peak season, October through April. TEP poles will remain in place until all other joint-use participants have transferred facilities from TEP poles. Pole bracing may be necessary, depending upon your prime contractor's construction sequence. For the latest TEP Electric Service Requirements and Construction Standards please visit our web site at <a href="http://www.tep.com/business/construction/ServReqBook.asp">http://www.tep.com/business/construction/ServReqBook.asp</a>.

Please notify your contractor to contact Blue Stake for the location of existing overhead and underground electric facilities and to comply with Arizona Blue Stake law regarding safe approach distances to electrical facilities. Please contact Blue Stake a minimum of 10 working days in advance to request overhead protection. Overhead protection is billable to the contractor if TEP has prior rights to the location of its facilities. It is the contractor's responsibility to protect TEP facilities. If damages occur, the total cost to repair those facilities will be billable to the contractor.

If you have any questions, please contact me at 918-8246.

Sincerely,

Project Manager

RE: Utility Information Request- Alvernon Way Realignment Study (TIA Runway Extension)

Dear Mr Solis:

Regarding the above referenced Pima County Road Project, I've reviewed the maps you enclosed with your letter. Qwest has mostly aerial facilities & a small amount of buried facilities within the identified area. It does seem likely removal of these facilities will be required. In that event Qwest can occupy the new proposed Public ROW or place its new replacement facilities within a PUE paralleling the proposed ROW. Qwest's current & future needs most likely will be satisfied by placing conduit & manholes within & through the proposed ROW or PUE. If there are overhead electric or TV facilities, a Joint Trench could be considered. Abandonment of the existing public ROW will be necessary and a formal request must be made to Qwest.

If there are any removals & replacements required of existing Qwest facilities, Qwest will seek reimbursement from Pima County for the total cost of these modifications. This reimbursement is predicated on the continuing legal actions before the courts regarding Qwest's Prior Rights.

Thank you for the opportunity to learn of the project & for allowing Qwest to share its future & current needs with you. When additional plans are available or when the final design is selected, please don't hesitate to send them to Qwest for review.

Sincerely,

Sr. Design Engineer

TUCSON WATER
DEPARTMENT

Kimley-Horn and Associates, Inc 2210 E. Fort Lowell Road, Suite 200 Tucson, Arizona 85719-2460

Attention: Rick Solis, PE

Subject: Alvernon Way Realignment Study

Dear Mr Solis:

Thank you for your request for information on the existing City of Tucson Water Department facilities in the vicinity of the Pima County DOT's Alvernon Way Realignment Study project.

Your request has been forwarded to the Mapping/GIS section. If you have any questions about the existing water system, please call Mr. Rick Meyer of the Mapping/GIS section at 791-2631.

Your request has also been forwarded to the System Planning and Evaluation Section. If you have any questions on future water systems, please call Mr. Sandy Elder of the System Planning and Evaluation Section at 791-4718.

When you have plotted the existing water facilities on the project plans, return them to the Modifications Unit for review. Any subsequent review for water system modifications should also be submitted to the Modifications Unit for review.

Sincerely,

Tony Tineo, PE

**Alvernon Way Realignment Study** 

Plan No. I-2007-023

DMJM Harris Project No. 60026275

Dear Mr. Solis:

The preliminary notification plans for the above referenced project have been reviewed by Southwest Gas Corporation (SWG). SWG has a 4" high pressure steel main along Los Reales Road that will be in conflict with the proposed runway area. Also, a 2" steel service and regulator station at 8101 S. Alvernon Way will also be in conflict with the proposed runway area.

SWG has an easement on the southeast corner of Alvernon Way and Hughes Access Road which has been enclosed for your reference. SWG requests to be informed as the project moves forward to further investigate potential conflicts and complete a more thorough review of this project.

All information is provided for reference use only and Blue Stake is suggested for best accuracy. Please be aware that SWG requires a minimum separation of two feet from HP feeders and any proposed structures and a minimum one foot separation from distribution facilities and any proposed structures.

If you have any questions or require any additional information, please contact me at (520) 794-6217.

Sincerely,

Shari R. Olsen, P.E. Distribution Engineer Southern Arizona Division
