

Carefree Ranch Weather Station

**Annual Hydrologic Data Report  
Volume III: Weather Statistics  
Water Year 2013**

# PREFACE

This publication presents meteorological data collected by the Flood Control District of Maricopa County (FCDMC) automated ALERT system. Thirty-six telemetered weather stations are included in this report. Thirty-two of the stations are located within Maricopa County, two in Yavapai County, and two in Pinal County.

The weather data contained in this report were collected, compiled, and edited by the Flood Warning Branch of the Engineering Division. The information contained herein is as accurate and complete as possible within the limitations of real-time data collection technology currently available. Wherever possible, footnotes indicating periods of questionable and/or missing data have been added to the appropriate weather summaries. Although every possible means has been taken to provide accurate data, the liability for using this data falls upon the user and not the FCDMC.

This report is Volume 3 of a 3 volume suite entitled “Annual Hydrologic Data Report – Water Year 2013”. Volumes 1 & 2 in order are [1] Precipitation Report; and [2] Surface Water and Streamflow Report. Additional copies of this report, and copies of the companion volumes, may be purchased from:

# INTRODUCTION

This publication is part of a three-volume report containing hydrologic and meteorological data collected by the Flood Control District of Maricopa County during Water Year 2013. This report is Volume III and contains weather station statistics. On-line users of this document have additional resources available by selecting hyperlinks. Weather Station names will link to the FCDMC web page for that weather station. Other hyperlinks will link within the document.

All weather stations report temperature and relative humidity; many also report a combination of wind direction, wind speed, barometric pressure and solar radiation. In addition dewpoint temperature is calculated at all weather stations using the temperature and relative humidity data. The temperature, relative humidity, and wind sensors record data every 15 minutes; the barometric pressure and solar radiation sensors every 30 minutes. Fifteen minute dewpoint temperatures are calculated by the ALERT computer using temperature and relative humidity data.

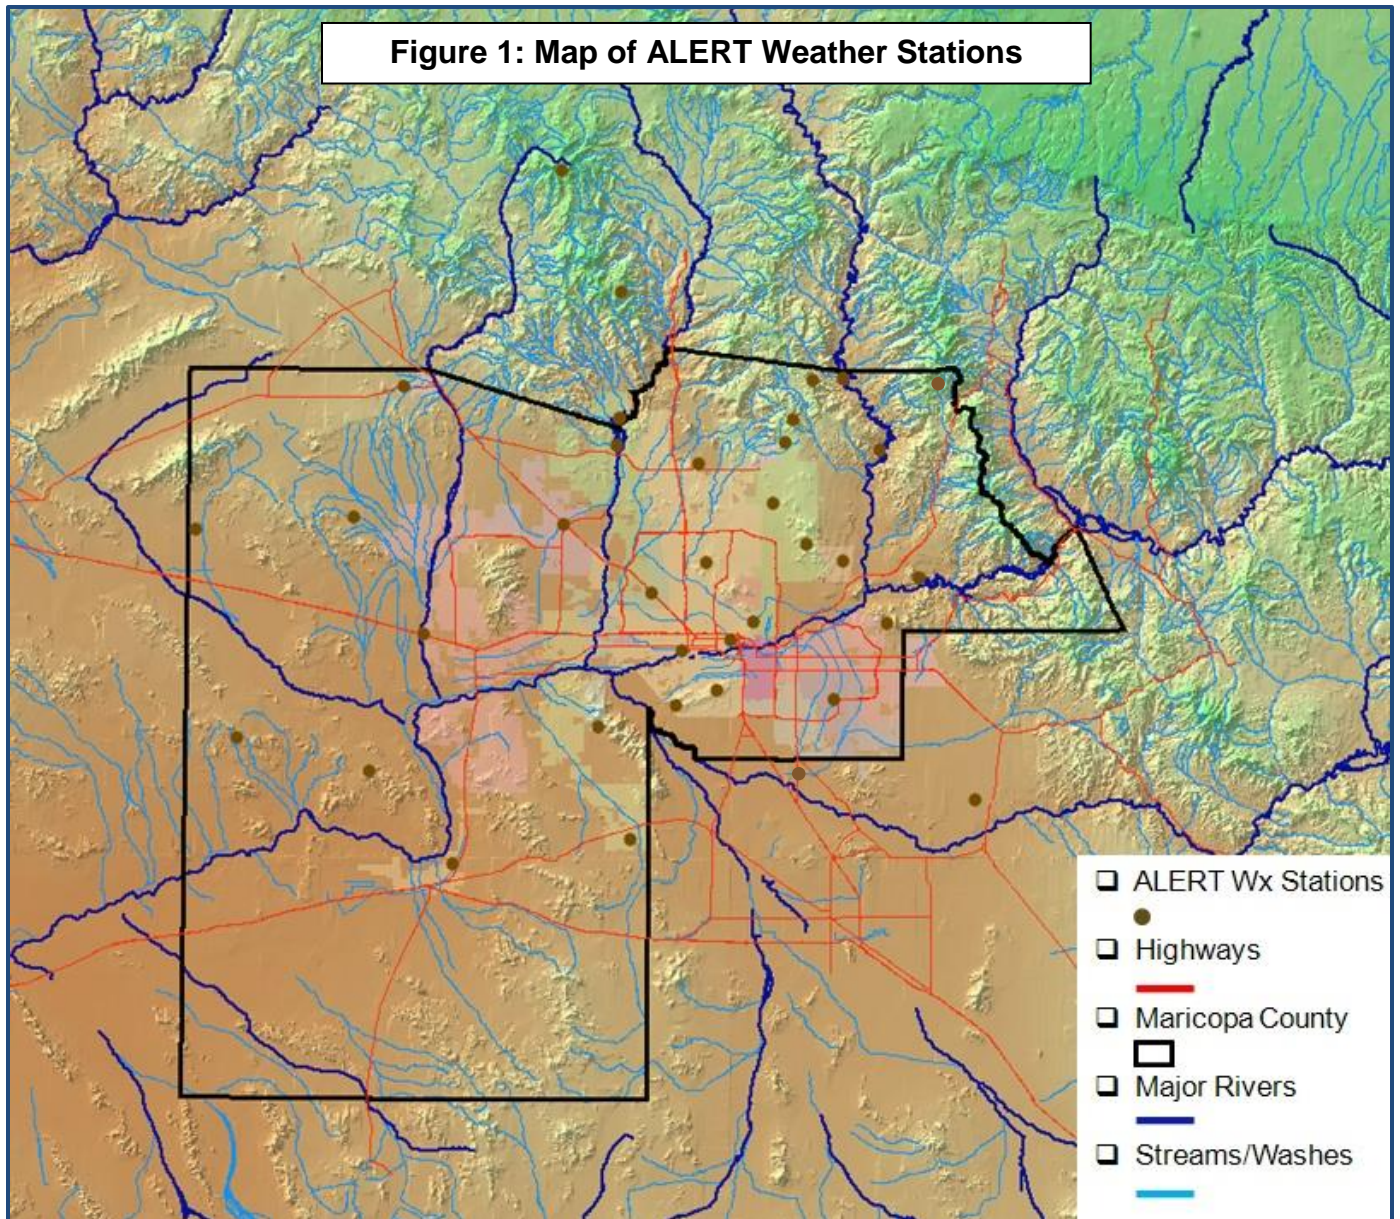

The following paragraphs describe the arrangement, collection, and compilation of the monthly weather station data contained in this report:

- Weather station data presented in the monthly weather summaries is based on the “2013 Water Year” which began on Oct. 1<sup>st</sup>, 2012 and ended Sept. 30<sup>th</sup>, 2013. Each monthly summary represents one weather station and lists daily weather station statistics by sensor. The monthly summaries are arranged chronologically by station name.
- An index of ALERT System weather stations, code names, locations, and installation dates is located on [page ix](#). This is followed by a sensor id number matrix listing the available sensors at each weather station. Both indexes are sorted by station name in alphabetical order. Station names are hyper linked to additional weather station information and climate summaries (where available).
- The monthly weather summaries contain daily maximum, minimum, and mean values for temperature and dewpoint. The monthly summaries also contain daily maximum and minimum values for relative humidity and barometric pressure. Finally, the monthly summaries contain daily maximum peak wind and solar radiation values. All of the ALERT System weather stations record precipitation; however that data is located in the [FCDMC Hydrologic Data Report Volume I](#).
- The unit of measurement for daily maximum, minimum, and mean temperature data is in degrees farenheight (°F). The daily maximum, minimum, and mean dewpoint data is in degrees farenheight (°F). The daily maximum and minimum relative humidity data is in percent (rh%). The daily maximum peak wind data is in miles per hour (mph). The daily maximum and minimum barometric pressure is in millibars (mb). The daily maximum solar radiation data is in watts per meter squared (w/m<sup>2</sup>).
- All data presented in the weather summaries is rounded to the nearest whole value. Additional and/or more detailed sensor data in hard copy or electronic copy is available for the weather station sensors listed in this report. Contact the FCDMC, Engineering Division, Flood Warning Branch at (602) 506-1501. Data can also be downloaded from our web site at <http://www.fcd.maricopa.gov/Rainfall/Weather/weather.aspx>.

Comments or discovered errors in regards to this report should be sent to the Flood Warning Branch via email which can be found on the [FCDMC ALERT System home page](#) or sent directly to Daniel Henz at [danielhenz@mail.maricopa.gov](mailto:danielhenz@mail.maricopa.gov).

# General Map of ALERT Weather Station Locations as of 09/30/13

## New Installations in Water Year 2013

There was one new weather station installed during Water Year 2013

- Sycamore Creek Upper, precipitation gage site, was upgraded to a weather station, Code # SYC, in June 2013. Sensors 5880 and 5881 were retained at the location. Sensors for Peak Wind (5866), Wind Direction (5865), Average Wind Speed (5870), Relative Humidity (5883), Dewpoint Temperature (5889), Barometric Pressure (5869), and Temperature (5882) were added at the location and began transmitting data on June 27, 2013. All weather station data for Water Year 2013 are filed under Sycamore Creek Upper.

## **Station Changes in Water Year 2013**

There were no weather stations moved in Water Year 2013.

# Summary of Significant Weather Events

The 2013 Water Year produced two noteworthy temperature events: A cold streak in January that brought anywhere from 4-7 days (location dependant) of consecutive minimum temperatures at or below the freezing mark and summer 2013 (JJA) set the record as the hottest summer in terms of average temperature for Phoenix at Sky Harbor Airport. Short summaries of the temperature statistics during these periods are provided below.

## January Cold Streak:

Chilly overnight temperatures are not uncommon to the Phoenix area during the winter months (DJF). According to the National Weather Service (NWS) Phoenix office, each winter Phoenix averages around one day where the minimum temperature meets or falls below the 32°F mark at Sky Harbor Airport (where official NWS temperature measurements are recorded). However, consecutive nights at or below the freezing mark become much less common especially events lasting more than 2-3 days.

This past January an unusually long cold weather streak occurred during the 11<sup>th</sup>-17<sup>th</sup> due to persistent upper level troughing over the western U.S. which helped advect a polar airmass out of the Candian Rockies south into the Desert Southwest. During this time period, twenty-nine out of the thirty-five operational FCDMC ALERT weather stations recorded at least four consecutive days where the minimum temperature reached or fell below 32°F. Even more impressive, sixteen of those stations exceeded five consecutive days. During this same span, Sky Harbor Airport recorded four consecutive days where the minimum temperature reached or fell below 32°F (12<sup>th</sup>-15<sup>th</sup>). This was the first time that had happened since December of 1988 (25 years).

Five ALERT weather stations were selected to further investigate the historical significance of this cold streak. These stations were chosen as they they cover the downtown area as well as the greater metropolitan Phoenix area and are close in terms of elevation. Four out of five stations have periods of record extending back into the late 90's and include calculated climate summaries on the [FCDMC Weather Information](#) webpage. The fifth station chosen, Gateway Community College, was included due to its proximity (~1.5 miles) to the Sky Harbor Airport ASOS station. The results of the study are listed in Table 1 below:

Winter (DJF)	Durango Complex	City of Glendale	Gateway C. College	Osborn @ 64 <sup>th</sup> St	Crossroads Park
2012-2013	5	5	5	5	7
2011-2012	0	2	0	1	3
2010-2011	2	4	2	4	4
2009-2010	0	1	1	2	2
2008-2009	2	2	2	2	2
2007-2008	2	2	1	6	6
2006-2007	5	3	2	2	3
2005-2006	1	2	1	3	3
2004-2005	4	5	1	4	3

Table 1: Number of Consecutive Days with Min Temperature ≤ 32°F					
Winter (DJF)	Durango Complex	City of Glendale	Gateway C. College	Osborn @ 64 <sup>th</sup> St	Crossroads Park
	4702	5522	4507	4617	6622
2003-2004	3	3	-	3	4
2002-2003	0	4	-	4	2
2001-2002	4	6	-	2	4
2000-2001	3	0	-	2	1
1999-2000	1	3	-	3	1
1998-1999	5	3	-	5	5
1997-1998	5	4*	-	1*	3*
1996-1997	3	2	-	-	5
1995-1996	1	1*	-	-	3*
1994-1995	2	-	-	-	-
1993-1994	2	-	-	-	-
1992-1993	0	-	-	-	-

*\* denotes one or more days with missing data during the time period.*

Table 1, above, depicts the longest streaks of consecutive days with temperatures at or below 32°F at five ALERT weather stations each winter season over their respective Periods of Record (POR). The left side of the table lists the Water Year, while the right side of the table separates weather stations data. Values highlighted in blue represent new or matched records that span the stations POR.

During the cold spell of January 2013, all five ALERT weather stations had at least five consecutive days of subfreezing minimum temperatures. No other winter period had more than three stations with five consecutive days. Three out of the five ALERT weather stations chosen set or matched a record for consecutive freezing minimum temperatures. It's worth noting that both City of Glendale and Osborn @ 64<sup>th</sup> St weather stations were within one degree during the morning of the 11<sup>th</sup> of January (not shown) from making six consecutive nights with freezing minimum temperatures. No other winter season had more than one station that matched or set a consecutive days record.

### Hottest Summer on Record? :

Summer 2013 was the official “hottest summer on record” in terms of average temperature for Phoenix according to the NWS. The Sky Harbor Airport weather station measured an average temperature of 95.1°F during the span of June 1<sup>st</sup> through August 30<sup>th</sup>. This mark narrowly bested the previous value of 94.9°F set back in 2007.

Twenty-four weather stations were chosen to take part in this summary. These stations were chosen namely as they all have periods of operational record greater than 10 years and include calculated climate summaries listed on the [FCDMC Weather Information](#) webpage. These stations vary in location covering the greater Metropolitan Phoenix area within Maricopa County as well as portions of Yavapai and Pinal counties. Station elevations range from 1,050 ft to 7,495 ft. The applicable stations are listed in Table 2 on the next page:

TABLE 2: Average Summer (JJA) Temperature compared to Normal						
Weather Station	Elev. (ft)	POR (yrs.)	Sensor ID	2013 Average Temp (°F)	Normal Temp (°F)	Diff. (°F)
Bartlett Lake	1,780	13	5912	90.9	90.1	0.8

Table 2 above compares temperature data at twenty-four ALERT weather stations during the summer season (JJA). The left side of the table includes weather station information including station elevation, period of record, and the four digit temperature sensor ID number. The right side of the table includes the 2013 average temperatures, the normal average temperatures, and the temperature difference (departure) from the mean over the period. Values highlighted in red, within the 2013 mean temperature column, represent new records for the period.

Twenty-one out of the the twenty-four stations had warmer than average summers. Interestingly enough, only two of the twenty four weather stations experienced their hottest summer on record in regards to average temperature. This brings up an interesting point in regards to regional climatology. The statement, “Phoenix’s hottest summer on record,” can be a bit misleading when taken out of context to mean the Phoenix Valley instead of at a single location. To further emphasize this idea, Gateway Community College weather station (not shown), approximately 1.5mi away from the Sky Harbor Airport weather station, recorded an average temperature of 93.2°F this past summer (only the 7<sup>th</sup> warmest summer of 9 year POR). This difference of 1.9°F between stations goes to show the large variability that arises due to microscale factors modulating temperatures, even over short distances.

**Table 3: Summer (JJA) Temperature Departures from Normal**

Table 3 on the previous page compares temperature departure data compared to normal at twenty-four ALERT weather stations during the summer seasons (JJA) over the POR. The left side of the table includes weather station information including normal average temperature. The right side of the table shows the temperature difference (departure) from the normal over the period separated by year. Positive values are warmer than average while negative values are colder than average. Values highlighted in red, within the temperature departure columns, represent the station record across the POR. Only data after 1995 is used for quality control purposes.

Further historical perspective is provided by Table 3. Six weather stations experienced their highest average temperature during summer 2011. This was the most of any year going back through Water Year 1995. The large number of stations likely has to do with a subdued end to the convective monsoon season leading to record setting heat lasting throughout the month of August (see Summary of Significant Events section from WY2011, [Annual Hydrologic Data Report, Volume III](#)). The next closest summer was 2007 with three stations setting their highest average temperatures, which was also the previous record holder at the Phoenix Sky Harbor station until this year.

Delving deeper into the six stations that set records in 2011 revealed that three were located within the urbanized Phoenix Valley, while the other three were located in rural desert locations. The range in station elevations spanned from 1,050ft (Durango Complex) to 2,180ft (Pima Rd @ Jomax Rd) which is an appropriate range when referring to the lower deserts of the Phoenix Valley. It's also worth mentioning that six of the remaining twelve ALERT weather stations, excluded from study for having POR less than ten years, also set their respective average temperature records in 2011 (four located in the urbanized Phoenix Valley, two located in rural desert). 2013 was undoubtedly the warmest summer on record at Sky Harbor Airport and will be listed as such in climate data sets. However, the FCDMC ALERT mesonet datasets paint a different picture from a regional climate perspective. Personal interpretation of the statement, "Phoenix's hottest summer on record" can be left up to the reader.
