

Horseshoe Lake Weather Station

**Annual Hydrologic Data Report
Volume III: Weather Statistics
Water Year 2016**

PREFACE

This publication presents meteorological data collected by the Flood Control District of Maricopa County (FCDMC) automated ALERT system. Thirty-eight telemetered weather stations are included in this report. Thirty-four of the stations are located within Maricopa County, two in Yavapai County, and two in Pinal County.

The weather data contained in this report were collected, compiled, and edited by the FCDMC Flood Warning Branch. The information contained herein is as accurate and complete as possible within the limitations of real-time data collection technology currently available. Wherever possible, footnotes indicating periods of questionable and/or missing data have been added to the appropriate weather summaries. Although every possible means has been taken to provide accurate data, the liability for using this data falls upon the user and not the FCDMC.

This report is Volume 3 of a 3 volume suite entitled “Annual Hydrologic Data Report – Water Year 2016”. Volumes 1 & 2 in order are [1] Precipitation Report; and [2] Surface Water and Streamflow Report. Additional copies of this report, and copies of the companion volumes, may be purchased from:

All Sections and Weather Summaries are linked within the document

Introduction

This publication is part of a three-volume report containing hydrologic and meteorological data collected by the Flood Control District of Maricopa County during Water Year 2016. This report is Volume III and contains weather station statistics. On-line users of this document have additional resources available by selecting hyperlinks. Weather Station names will link to the FCDMC web page for that weather station. Other hyperlinks will link within the document.

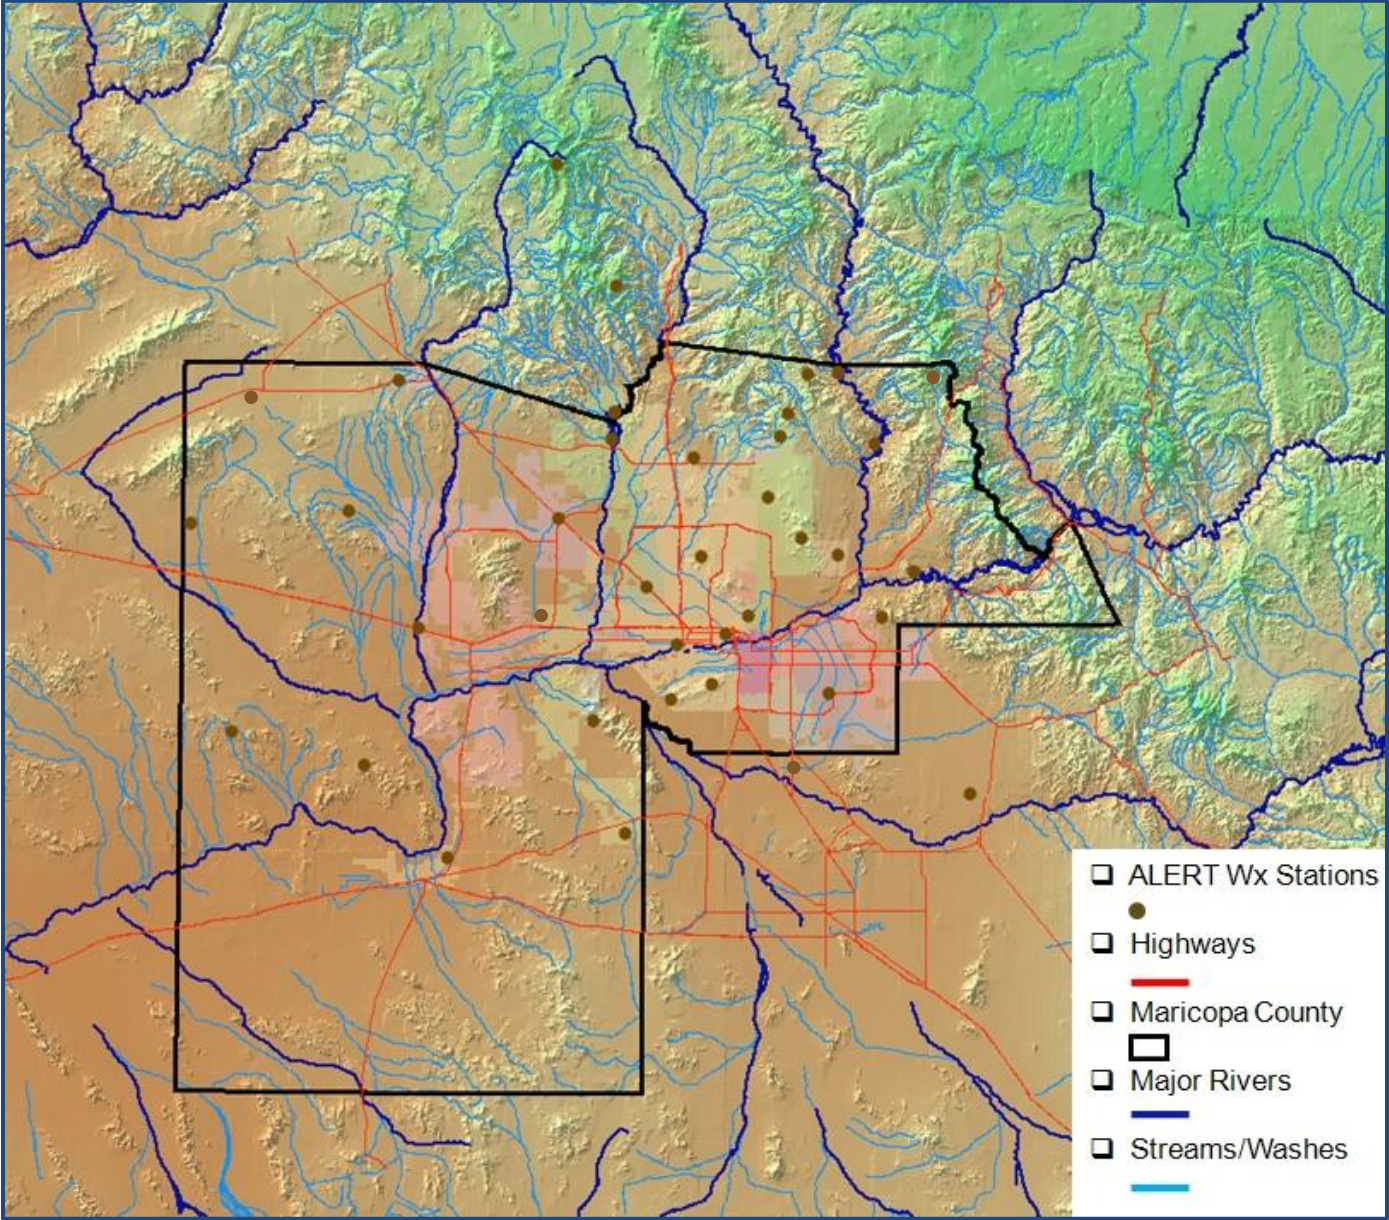

All weather stations report temperature and relative humidity; many also report a combination of wind direction, wind speed, barometric pressure and solar radiation. In addition dewpoint temperature is calculated at all weather stations using the temperature and relative humidity data. The temperature, relative humidity, and wind sensors transmit data every 15 minutes; the barometric pressure and solar radiation sensors every 30 minutes. Fifteen minute dewpoint temperatures are calculated by the ALERT computer using temperature and relative humidity data.

The following paragraphs describe the arrangement, collection, and compilation of the monthly weather station data contained in this report:

- Weather station data presented in the monthly weather summaries is based on the “2016 Water Year” which began on Oct. 1st, 2015 and ended Sept. 30th, 2016. Each monthly summary represents one weather station and lists daily weather station statistics by sensor. The monthly summaries are arranged chronologically and by station name.
- An index of ALERT System weather stations, code names, locations, and installation dates is located on [page viii](#). This is followed by a sensor id number matrix listing the available sensors at each weather station. Both indexes are sorted by station name in alphabetical order. Station names are hyper-linked to additional weather station information and climate summaries (where available).
- The monthly weather summaries contain daily maximum, minimum, and mean values for temperature and dewpoint. The monthly summaries also contain daily maximum and minimum values for relative humidity and barometric pressure. Finally, the monthly summaries contain daily maximum peak wind and solar radiation values. All of the ALERT System weather stations record precipitation; however that data is located in the [FCDMC Hydrologic Data Report Volume I](#).
- The unit of measurement for daily maximum, minimum, and mean temperature data is in degrees fahrenheit (°F). The daily maximum, minimum, and mean dewpoint data is in degrees fahrenheit (°F). The daily maximum and minimum relative humidity data is in percent (%). The daily maximum peak wind data is in miles per hour (mph). The daily maximum and minimum barometric pressure is in millibars (mb). The daily maximum solar radiation data is in watts per meter squared (w/m²).
- All data presented in the weather summaries is rounded to the nearest whole value. Additional and/or more detailed sensor data in hard copy or electronic copy is available for the weather station sensors listed in this report. Contact the FCDMC, Flood Warning Branch at (602) 506-1501. Data can also be downloaded from our web site at <http://www.fcd.maricopa.gov/Weather/weather.aspx>.

Comments or discovered errors in regard to this report should be sent to the Flood Warning Branch via email at FloodInfo@mail.maricopa.gov or sent directly to Daniel Henz at danielhenz@mail.maricopa.gov.

as of 09/30/16**

New Installations in Water Year 2016

There were no new weather stations installed during Water Year 2016

Station Changes in Water Year 2016

There were no weather stations moved in Water Year 2016.

	- 2007		71.6°F

Summary of Significant Weather Events

The 2016 Water Year produced several abnormally warm periods, but none was more significant than the month of June. According to the National Weather Service Phoenix WFO, Sky Harbor Airport measured an average temperature of 94.8°F for the month which tied 2013 for the warmest June on record. Twelve daily temperature records were set during the month including six maximum temperatures and six high minimum temperatures. The warmest day of the Water Year also occurred on June 19th. A short summary of the temperature statistics from the ALERT weather station network during the period is provided below.

Twenty-eight weather stations were chosen to take part in this summary. These stations were chosen namely as they all have periods of operational record greater than 10 years and include calculated climate summaries listed on the [FCDMC Weather Information webpage](#). These stations vary in location from covering the greater Metropolitan Phoenix area within Maricopa County as well as portions of Yavapai and Pinal counties. Station elevations range from 1,050ft to 7,495 ft. The applicable stations are listed in Table 6 below:

TABLE 6: Daily Mean June Temperature 2016 Compared to Normal					
Weather Station	Elev. (ft)	POR (yrs.)	Sensor ID	2016 Mean Temp. (°F)	Normal Mean Temp. (°F)
Bartlett Lake	1,780	16	5912	94.7	88.8
Buckeye FRS #1	1,090	20	5282	93.5	90.5
Carefree Ranch	2,960	27	4932	90.6	85.1
City of Glendale	1,220	21	5522	95.1	91.1

TABLE 6: Daily Mean June Temperature 2016 Compared to Normal					
Weather Station	Elev. (ft)	POR (yrs.)	Sensor ID	2016 Mean Temp. (°F)	Normal Mean Temp. (°F)
Thompson Peak	3,995	21	5947	85.8	84.6
Tiger Wash Fan	1,605	22	5142	94.0	89.1
Usery Mtn. Park	2,115	23	6652	91.8	90.5
Wickenburg Airport	2,385	23	7122	91.8	85.7

Table 6, above and on the previous page, compares temperature data at twenty-eight ALERT weather stations during the month of June. The left side of the table includes weather station information including elevation, period of station record (POR), and the four digit temperature sensor id number. The right side of the table includes the June 2016 mean temperature, the normal mean temperature, and the temperature difference from the mean (anomaly) over the month span. Values highlighted in red, within the 2016 mean temperature column, represent new or match records for the period.

During June 2016, twenty-six of the twenty-eight weather stations experienced an above average mean temperature when compared to that station’s normal mean temperature. Perhaps even more significant, fourteen of the twenty-eight (50%) stations matched or set records for the warmest mean temperature during the month. It’s also worth noting that the next highest number of matched or broken records for June occurred in WY2013 with five. The distribution of stations that saw record heat covered both the lower valley deserts as well as our high terrain stations (above 6,500ft) across southern Yavapai County, including both Mt. Union and Horsethief Basin. There was also a nearly even split of stations located within the urbanized Phoenix corridor versus rural desert sites which experienced record heat. When looking at all stations combined (not shown), the mean temperature was 91.4 °F. This narrowly bested WY2013 (91.0 °F) for warmest on record.

Going a step further temperature anomalies, departures from the mean, were gathered for each station. Next, standard deviations were calculated to observe the variability of the temperature data sets at each weather station over individual periods of record. The greater the standard deviation, the less historically meaningful the 2016 anomalies were. Finally, standardized anomalies were calculated using the anomaly and standard deviation data at each station. Standardized anomalies are used with weather data to find statistical outliers (uncommon events) in data sets after removing bias. Absolute values between zero and one, meant the anomaly fell within one standard deviation of normal or in this case a common event. Values greater than one were outliers and in this case the greater the value, the more uncommon the event was. Table 7, below and on the next page illustrates this data.

TABLE 7: June Temperature Statistics				
Weather Station	Elev. (ft)	Anomaly (°F)	Std Dev (°F)	Stdized Anomaly
Bartlett Lake	1,780	5.9	2.6	2.3
Buckeye FRS #1	1,090	3.0	1.8	1.7
Carefree Ranch	2,960	5.5	2.5	2.2
City of Glendale	1,220	4.0	2.5	1.6
Crossroads Park	1,270	2.2	2.2	1.0

TABLE 7: June Temperature Statistics

Tiger Wash Fan	1,605	4.9	2.9	1.7
Usery Mtn. Park	2,115	1.3	2.2	0.6
Wickenburg Airport	2,385	6.1	2.6	2.4

Table 7, above and on the previous page, compares various temperature statistics at each of the twenty-eight ALERT weather stations during the month of June. The left side of the table depicts weather station information including elevation. The right side of the table includes temperature anomalies, standard deviations, and standardized anomalies. Standardized anomalies (SAs) greater than or equal to 1.50 are highlighted in red.

Looking at the temperature anomalies, departures from the mean, twenty stations experienced a 2.5 °F or greater warm anomaly while eight stations experienced a 5.0 °F or greater warm anomaly during the period. The average anomaly for all stations (not shown) was 3.5 °F which exceeded the average standard deviation (not shown) of 2.6 °F. Eighteen of the twenty-eight station's SAs (64%) were greater than 1.0. Furthermore, thirteen of these eighteen stations exceeded 1.5 times the standard deviation and six of which exceeded 2.0. The average temperature SA across all the weather stations was 1.3 (not shown) which was the warmest of any June in the POR.

Finally, June 19 was the hottest day in Water Year 2016 with thirty-six of the thirty-eight weather stations recording its yearly maximum temperature. The highest observed temperature reading on the 19th was 122 °F at both McMicken Dam and Buckeye FRS #1. Twenty stations also set or tied new maximum daily high temperature records for any date in their POR.
